Burlington One-Day Farm Show Is Success

IN SPITE of the downpour on Wednesday night and the threatening weather on Thursday morning, the Agricultural Products Show staged in Burlington, on October 13, in connection with the 250th Anniversary of Burlington, was a wonderful success both from the standpoint of the exhibits and from the attendance. Conservative estimates state that at least 6000 people viewed the exhibits and enjoyed the program of speakers. It was entirely proper that the Agricultural Day of the celebration of Burlington should play such an important part in this anniversary since agriculture has been the basic industry all down thru the history of Burlington County.

Commenting upon Burlington County's agriculture, Senator Frelinghuysen said, "Today it is the greatest agricultural county in the state. Burlington County from the beginning was an agricultural center, altho the early settlers knew nothing of the methods we use today."

Secretary Wilbur won the hearts of his audience by his very pleasing and inspiring address. Very appropriately he wove his talk around the dying words of Captain James Lawrence, once a native of Burlington. "Lawrence's dying words, 'Don't give up the ship,' have had a measureless effect upon the morale of the navy and the nation," declared Secretary Wilbur, "and we must continue to carry on the spirit of Lawrence and hold fast to our ideals of liberty and democracy."

The various exhibits were staged in tents and the committee is indebted to Mr. Howard Frazier, of Edgewater Park, for the use of the tents in which the fruits and vegetables were placed. The show was fostered by committees from the Burlington County Board of Agriculture and Extension Office in cooperation with the City Council of Burlington, and Burlington Kiwanis Club and the Chamber of Commerce. There was also loyal support on the part of many manufacturers and business interests in the county and it took the best efforts of all concerned to make the day the success that it was.

Grange Exhibit was Feature

The experiment of holding a one-day Agricultural Products Show has aroused so much interest among the farmers of the county that already they are beginning to talk about plans for the show another year.

The competitive Grange exhibit in which Burlington, Moorestown, Rancocas, Pemberton and Crosswicks Granges participated was undoubtedly a paramount feature of the vegetable display held in connection with the show. Each Grange selected and arranged for exhibit 20 boxes of vegetables. The exhibit, totaling 100 boxes, was the largest display of its kind ever held in the state of New Jersey.

EASY FLOCK CONTROL OF WORMS

Nothing is more important than de-worming. *Right now.* Nearly every county is worm infested. Your flocks are not immune.

This is the de-worming method that absolutely does not decrease palatability of the mash or throw hens off laying. It purges birds of *all* worms—tapeworms, roundworms, etc. Snaps layers into abundant new vitality. Sends 100% of the feed the egg way.

Your money refunded if Pratts fails. Write for your copy of Profit From Poultry—1928.

OWEN SHEPHERD, Vice President & Treasurer.

New Jersey Farmers Carry Heavy Tax

THE New Jersey Farm Bureau and the State Grange have taken steps to bring about a more equitable taxation system as a form of farm relief that will interest every farmer in the state. Answering a call of the farmers from every section those organizations have appointed a committee to study the tax system of the state and to take some action that will result in lower taxes to the farmer.

At its recent legislative conference it was brought out that the New Jersey farmer is taxed heavier than farmers in any other state of the United States. Taxes in this state are three times as heavy as the average for the country.

Among the strongest advocates of the move of the agricultural organizations in their attempt to secure lower taxes for the farmer is Dr. John T. Dorrance, the president of the Campbell Soup Company. Dr. Dorrance is president of one of the largest food manufacturies in eastern United States and his company owns many large and beautiful farms in New Jersey where they grow a part of the raw products for their factory.

Fine 500 Per Cent Increase in Tax

Dr. Dorrance is lending his aid to the New Jersey farmers' move and he has said: "There is no greater economic waste to any community than a trained farmer, capable of running a hundred-acre farm, doing unskilled labor." In the preliminary study of the tax problem in New Jersey the investigators have found as much as 500 per cent increase in taxes on farms in Camden County.

One illustration cited by the committee is the case of a 146-acre farm which in 1917 was assessed at $16,000. The tax rate was $2.65 per $100, making a tax for that year of $423, or about $3 per acre.

By 1927 the farmer had sold 47 acres from the farm, leaving 99 acres, yet the assessment had been raised to $45,500 and the tax rate had jumped to $3.60. The tax bill for 1927 was $2001.60. Ten years ago the tax was about $3 per acre while this year it was more than $20 per acre.

Another small farm in the same county was assessed for $4525 on 29 acres back in 1917, while today the assessed valuation is $15,600 and the rate has jumped from $2.02 to $3.12. This farm ten years ago paid a tax of $91.40 while this year it pays $448.28, or about $17 per acre.

Tax Rates Drive Farmers from Farms

The tax committee is bringing to light instance after instance of high tax rates that are driving farmers to the wall or from the farm. Other instances are known where the tax rate has gone up 50 cents an acre to more than $2 and the rate is still rising.

The investigators are planning to give considerable study to the Pennsylvania tax system. It has been found that farms in Philadelphia, even within the city limits, pay only $1.77½ per $100 and in some wards a few cents less. This includes school tax.

Three rates apply to real estate in this district, regardless of the valuation set by the assessor. The full city rate, which is $2.65; the suburban rate, $2.06 2-3 and the farm rate, $1.77½.

When an improved highway passes a farm, even within the city limits, only for a depth of 100 feet along the highway does the farmer pay suburban rates. All the rest of the land goes at the farm rate.

With a study covering every section of the state, including farm property, suburban developments, industrial districts and land held for speculation, the investigators are planning to issue a report on their findings after the survey is completed and then take steps to remedy the condition.—A. K.

"I envy the fat woman when she laughs."

"Why?"

"There seems to be so much of her having a good time."

World's Most Modern Mill

and Manufacturing Methods Keep BB (Bull Brand) Feeds Uniform Year-In and Year-Out

BB (Bull Brand) Feeds are made in the world's most modern mill. They are manufactured by the world's modern methods. And every practical test that science has devised is used to keep them *uniform* and dependable.

Only pure, "grade-one" ingredients are used in making BB [Bull Brand] Feeds. Samples are taken from a dozen different parts of each carload of ingredients as soon as it arrives at the mill. These samples are all graded for quality and given a thorough chemical analysis for protein, fat, fiber, carbo-hydrates, and moisture. They must all meet our exacting specifications before the car is accepted and unloaded.

The approved ingredients are first run over magnetic belts which remove all bolts, nails, metal, scraps, and steel fuzz from them. They are next given *three* thorough cleanings, by fine screening machines and are distributed into huge steel tanks. Then they are measured—weighed—properly balanced in contents—and blended thoroughly by scientific machines. The mixed feed is carried in conveyors to a special screening machine which gives it a *thorough cleaning*. Then it must pass a chemical analysis before it is sacked.

These painstaking manufacturing methods insure that every sack of BB [Bull Brand] Feed contain only good, pure, clean, wholesome, balanced, and well-mixed rations. They guarantee feeds that do not vary—feeds that are always the same in quality, formula, analysis, and result-producing value. They are the reasons why practical Feeders get the maximum production and health results from their cows and poultry year-in and year-out.

Make This Test Under Our Money-Back Guarantee

Try BB [Bull Brand] Sweetened or Dry Dairy Ration under our money-back guarantee. Get 300 pounds of BB [Bull Brand] from your dealer. Feed it to any one of your cows according to the directions that are given in each bag. Check the milk produced each day. Compare the results. Then if BB [Bull Brand] Dairy Ration has not produced more milk per dollar of feed cost—bring the empty sacks and the unused feed back to your dealer and he will refund every cent of money that you paid to him.

Poultry—Hens, 16@22c; springers, 18@25c; dressed, 25c@$2 each.

Vegetables—Potatoes, 120@20c ½ pk; 90c@$1.25 bu; cabbage, 5@10c; lettuce, 5@10c hd; celery, 5@25c stalk; horseradish, 5@10c glass; onions, 5c bch, 100@120 bchs; beets, 5c bch, boiled, 5@10c plate; turnips, 10c ¼ pk; carrots, 5c bch, 10c box; endive, 5@10c hd; lima beans, 25@30c qt; tomatoes, 10@15c box; pumpkins, 20@25c ea; corn, 20@25c doz; spinach, 10@15c pk.

Fruits—Apples, 15@20c ¼ pk, $1@2.25 bu; peaches, 5@10c ea.

Wholesale Grain Market—Wheat, $1.25; corn, $1; rye, 90c; oats, 50c; bran, $36 ton; middlings, $45 ton.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 48½@49c; do, choice, 47@48c; do, good, 45@46c; do, prints, 49@53c; do, blocks, 48@50c; do, ladles, 37@38c. Old and Penna rolls, 33½@36c; Ohio and W Va rolls, 33½@35c; store packed, 32½c; dairy prints, 33½@36c; process butter, 41@42c.

Eggs—Select sales, small lots, nearby current receipts, candled, 46@48c; few fancy, higher.

Live Poultry—Old chickens, hens, 4½ lbs, 24@25c; do, 4@4½ lbs, 23½@24c; do, 3½@3½ lbs, 15@18c. Leghorns and other light stock, 12@17c. Old roosters, mixed colors, 16@17c; do, Leghorns, 13@15c; young chickens, colored, 3 lbs and over, 24@25c; smaller, 22@24c; Leghorns, as to size, 22@24c. Turkeys, young, 8 lbs and over, 40@45c. Ducks, White Pekins, 4 lbs and over, 23½@25c; puddle, 4 lbs and over, 22@24c; Muscovy, 4 lbs and over, 22@24c; all kinds, smaller, 17@18c.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .47½	$ .49½	$ .46	$ .47½
Eggs, fresh gathered extra firsts (N. Y.)	.47½	.50	.43½	.49
Potatoes, 120-pound sack (Philadelphia)	2.37½	2.52½	2.62½	3.70
Steers, good to choice (Lancaster)	12.75	12.75	11.87½	9.25
Hay, Number 1 timothy, baled (Phila.)	16.50	16.50	16.50	23.50
Wheat, No. 2 red winter (Philadelphia)	1.37	1.35½	1.37½	1.46½
Oats, Number 2 white (Philadelphia)	.60½	.59¾	.60½	.57

Feed Market is Weaker

Review of the Week Ending October 29

EGGS—The New York egg market was unsettled and receipts were somewhat lighter. The quality was very regular and buyers were more particular. The best grades of white eggs advanced during the early part of the week but the demand fell off at the higher prices and the market again weakened. The demand improved later in the week and prices were about firm at the close.

POULTRY—The market for live fowl was very weak due to the unusually heavy receipts and the liberal carry-over from the previous week. Chickens sold at low prices early in the week and the demand was fairly active. Boilers were scarce and sold readily and roosters were scarce and firm. Receipts of dressed poultry were heavy and the market was weak, especially on roasting chickens.

BUTTER — The butter markets were unsettled and prices fluctuated. At the close of the week 92 score butter was about one-half to three quarters of a cent per pound lower than on Monday. At the close of the week the market was about steady at prevailing prices.

POTATOES—The potato markets at both shipping points and consuming markets was dull and weak and prices declined. Supplies were liberal and trading generally slow. Shipments continued heavy with Minnesota and Maine the heaviest shipping states. The movement from Pennsylvania was about the same as the past week and ran around 25 to 30 cars per day. On Monday, October 31, the markets were still dull with limited trading.

LIVESTOCK—The Chicago hog market was weak and prices were considerably lower than last week. The better grades of beef steers were higher but in-between grades were irregular and generally lower. Fat cows, heifers and bulls were weak, while vealers were about $1.00 lower. Fat lambs were higher while sheep and feeding lambs advanced.

FEED—The mill feed market was slightly weaker due chiefly to the decline in grains. Good pasturage was also responsible for lighter feeding. Bran was about steady while other wheat feeds were lower. Cottonseed meal was about 50c lower than last week. Linseed meal prices were steady but the demand was inactive. Gluten feed prices were practically unchanged while hominy was lower.

GRAIN—The grain markets were generally steady during the week. Markettings of spring wheat, particularly in Canada, continued heavy. Receipts of corn were larger and new corn was also arriving on the market, but prices at the close showed little change from last week's quotations. The oats market was firm and advanced about 2c. Rye and barley were fairly steady.

HAY—The hay markets were dull and weak with liberal receipts of low quality hay. The demand was limited and mild weather reduced feeding requirements. Timothy was draggy in most eastern markets altho top grades were scarce and sold readily.

APPLES—The New York and Philadelphia apple markets strengthened during the week due to the improved demand and better quality of most receipts. Rumors of light supplies in the country and the movement of stock to cold storage also stimulated the demand and helped to keep supplies on the market from accumulating.

WOOL MARKET

Boston, October 29, 1927.

Domestic: Ohio and Penna fleeces—Delaine unwashed, 47c; ½-blood combing, 47c; ⅝-blood combing, 47@48c; ¾-blood combing, 48c. Michigan and New York fleece—Delaine unwashed, 45@46c; ½-blood combing, 45@46c; ⅝-blood combing, 47c; ¾-blood combing, 48c. Wisconsin, Missouri and average New England—½-blood, 43@44c; ⅝-blood, 45@46c; ¾-blood, 46c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, October 29, 1927.

Cloverseed, cash, imported $15.50; October, $17.75; December, domestic, $17.75; December, imported, $16 bid; March, domestic, $17.75. Alsike, cash $15.40 bid. December, $15.50 bid; January, $15.70 bid. Timothyseed, cash, $4.95 bid; December, $2; March, $2.10.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, October 31, 1927. Quotations cover sold car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$34.00@35.00
Spring bran	32.50@33.75
Soft winter wheat bran	35.50@35.50
Hard winter wheat bran	35.00
Standard middlings	34.00@34.50
Soft winter wheat middlings	37.50@42.00
Flour middlings	38.50@42.00
Red dog flour	45.00@46.50
White hominy	38.00
Yellow hominy	37.50@38.00
Gluten feed	41.80
24 per cent cottonseed meal	44.25
41 per cent cottonseed meal	46.75
43 per cent cottonseed meal	49.00
34 per cent linseed meal	50.20

County News and Comment

Berks County, Pa.—Weather conditions have been unfavorable for outside work the last few days. Very heavy rainfall has made the corn fields very soft. Some of the corn has been cut and very little has been husked. Wheat is coming up nicely. Apple crop very small, no winter fruit shipped out of the county. Peaches also very short. Some farmers sprayed a little ahead of having rotten potatoes due to not enough spraying. Most of the crop sold to the local trade. Pasture and meadows good all summer. Silos are all filled with a good quality of feed. We have had no damaging frost up to this time. Price—Wheat, $1.25; corn, $1.20; oats, 50; butter, 60c; eggs, 55c; lard, 18.—W. N. M., Oct. 19.

Blair County, Pa.—Most of the corn is cut and some is husked. Apple picking is a short job this year. Pears and quinces practically none. Potato crop is very good this year due to blight. We have had considerable rain recently which has interfered somewhat with silo filling and cutting the second growth. The Catherine Township Calf and Pig Club closed their summer's work on October 1 with a good round-up of their animals. Their display of farm and garden products. A short program was rendered in the afternoon. Among the chief speakers were our new county agent, Mr. E. G. Hamill, and representatives of State College and District Attorney M. D. Patterson of Blair County. Eggs, 55c; wheat, $1.25; corn, $1; oats, 50c; hay, $20; straw, $15.—H. E. H., Oct. 20.

Centre County, Pa.—The hot, dry weather early this month helped mature the corn. Several good showers have brought up the wheat in fine style. In many gardens and fields the first frost of the season killed all the tender plants have been killed by frost while in other communities the garden truck was killed several weeks ago. Most of the corn is cut and silos filled. Potato raising was a short job this year. Some rot is reported. Winter apples of good quality are being picked, and much cider making this year. Grapes were a short crop this year. Prices: wheat $1.25, corn, $1, barley, seed, buckwheat, 90c; oats, $1; lard, 15@18c; eggs, 45@50c; butter, 50c.—A. Oct. 19.

Dauphin County, Pa.—Very heavy rains during the month and almost continuous rain during the last week have delayed road rebuilding in different sections of county. Some potatoes still in fields. Yields of early-sown grain look good. About half of corn remains to be cut. Crop will be much better than was expected early in season. Seeding up to date well. Very good yields reported by many potato growers. Buckwheat crop good. Prices: wheat $1.30, potatoes, $1.15; oats, 55c, buckwheat $1.—I. F. M., Oct. 22.

Lancaster County, Pa.—Quite a lot of rainy weather has hindered the wheat seeding. Corn is being cut, is a much better crop than was expected early in the season. There have been no killing frosts and late crops have had time to mature. Pears were a good crop but apples are scarce. Eggs are scarce and are selling for 55c; butter, 60c; hay, $12.—R. C. R., Oct. 18.

Lebanon County, Pa.—The authorities of General Weiser Park will plant in this historic tract every known native Pennsylvania tree. R. K. Meyer, of Buffalo Springs raised 440 bushels of potatoes on an acre and a half. He used good seed on a manured sweet clover plot which was enriched by 1000 pounds of fertilizer and sprayed 12 times with a high pressure sprayer using home made Bordeaux mixture. Miles Horst raised 466 bushels to the acre. Lane Zug raised 471 bushels. Both plowed down sod. Horst manured lightly. Zug heavily. Horst added 1200 pounds of fertilizer to the acre; Zug, 1000 pounds. Both planted Michigan seed, used home made Bordeaux which they applied with high pressure sprayers. Horst sprayed nine times, Zug, twelve. Both used the weeder five times and the cultivator six times. The boys of Hershey Industrial School on last year's potato patch on which they put six tons of manure, no fertilizer, picked 405.9 bushels. They sprayed only five times. We have had two tropical storms in little more than a week. Frost has almost dried the fodder. There is plenty of soft corn which is likely to mold on wet ground. All sowing of wheat was stopped dead. Wheat fields look good. Eggs, 54c; potatoes, $1, apples, $2; hay, $16; straw, $12; chickens, 24c.—R. I. W., Oct. 24.

Luzerne County, Pa.—Rain began October 16 and rained almost continuously for three days and four nights. The rains caused the Susquehanna River to rise to a height of about 21 feet in the region near Wilkes-Barre and the lowlying sections are under a couple of feet of water in several places. Before the storm period this section had nice weather for doing fall work. Potatoes are said to be a very poor crop. Apples and nuts are scarce. Truck crops in Salem Township have been quite good this year. This township lies along the river and the season are somewhat longer and more favorable for trucking than the region back of the mountains. Prices: eggs, 50c; apples, $1 bu; chickens, 25c; milk, 5½c qt in bulk quantity; tomatoes, 50c basket; peaches, $2.75 bu; corn, $2.80 cwt; oats, 76c bu; pork sausage, 30c lb; fresh sliced ham, 35c; bacon, 40c.—M. G. T., Oct. 20.

Somerset County, Pa.—On October 18 we had a snowfall of 4 inches and on the 19th a hard rain. Potatoes about all dug, some a fair crop. Silo filling completed. Wheat looking fine. The fair at Meyersdale in September was largely attended every day. Baby beeves looked fine. The B. & O. Guernsey cattle train will be at Meyersdale, November 2nd. Prices of farm products about the same.—H. W. B., Oct. 26.

Susquehanna County, Pa.—The worst storm this year occurred during the third week of October. The wind was terrific, blowing down fruit, fences, and in some cases, removing buildings. It rained constantly for four days and was very cold. Apple harvest is on but less than half a crop is expected. Potatoes are small, few in a hill and rotting badly in wet ground. Eggs are scarce and high in price. Most silos have been filled. Threshing is about all done; fairly good yields are reported. We have had several frosts, some hard enough to freeze water but not much damage done. New milk cows are scarce and high in price. The dressed pork market is open and paying a good demand for light pork at 19c. Eggs, 55c; potatoes $1.50; butter, 59c; apples, $1.50@2.—J. A. G., Oct. 24.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

MARKETING the potato crop down on the Eastern Shore is some job. For a period of five weeks, from the last of June until the first week of August, over 50 per cent of the total shipments of potatoes of the entire country came from this section.

With such a large output and with only a limited time in which to market them the problem becomes more difficult. The growers this season, with several disastrous years' experience, determined to find a more satisfactory method of marketing. The Eastern Shore Farmers' Association formed the Farmers' Quotation Committee. The committee was to establish a price for a definite period of time and the growers were to agree not to sell below that price. Dealers affiliated with the committee were to handle the potatoes. The price was to be based upon actual market conditions and shipments were to be systematized in order that the established price might be maintained.

Plan to Correct Mistakes

Such a system of marketing was an innovation and as with any new movement mistakes were bound to occur and problems to arise. E. Wilfred Ross, secretary of the Farmers' Quotations Committee, has issued a very interesting summary of the season. He speaks frankly of the mistakes and gives suggestions for correcting them.

He states, "The plan of the Eastern Shore Farmers' Association, notwithstanding its short period of operation, has proved its soundness in purpose. It has netted the growers of the Eastern Shore a vast sum of money, it is capable of drawing forth millions more."

There were between four million and five million barrels of Irish potatoes grown on the Peninsula this year and a net excess return of $1.00 per barrel to the grower over what would have accrued under the old method of marketing is in no sense an exaggeration. "If the question were asked: 'Did the plan make the Eastern Shore Growers any money?' it could be answered in the affirmative. But, if the query happened to be: 'Was your marketing plan a success?' that would be a 'horse of another color.'

"Failure to achieve complete success was due to lack of cooperation on the part of growers, underselling both at home and in other sections, and uncontrollable apprehension on the part of some of the affiliated distributors. However, the demonstration that even partial coordination is beneficial to the Eastern Shore farmers should give impetus to a continuation and final perfecting of the plan."

This underselling that Mr. Ross mentioned sometimes resulted in Eastern Shore potatoes selling on the consuming markets at the same price or even less than the committee had set as their minimum price and it is not hard to understand how that would disrupt an orderly marketing program.

Must Adhere to Regulations

In conclusion he sums up the points necessary for satisfactory distribution. Many of these points are applicable to farmers in all sections. There are estimated to be about 10,000 farmers on the Shore. No marketing plan can function successfully unless at least 85 per cent of them are subscribers to the plan and will entirely adhere to its regulations.

The acreage must be curtailed and other crops grown on the surplus soil formerly used in growing an oversupply of potatoes.

Storage sheds must be erected to afford growers opportunity to dig potatoes when mature and weather conditions are favorable, then store the surplus until the markets are ready for them, at the same time saving enormous demurrage charges.

Loading must be adjusted to meet the ability of the distributors to sell.

Prices must be based on the quality and the grade of the stock. Control must be vested in one specific body and that body must be the direct representative of the grower.

Brokerage must be confined to legitimate commission for service rendered and not extended to buyers as a secret inducement to consumate sales.

Confusion among growers must be reduced to an absolute minimum and sales forms should be uniform.

Credit is too loose. Shipments should be protected be "draft attached." Unjustifiable deductions from invoices will be eliminated and the growers will be able to get their money sooner. It is entirely feasible under this system, for the growers to cash their loading tickets at once for half of the face value and receive the remainder of amounts due them a few days thereafter.

Must Have Signed Contracts

Signed contracts must be entered between buyer and seller, avoiding misconception and misunderstanding.

Information relative to crop conditions, etc., should be transmitted to growers without delay.

Finally, there must be complete harmony among affiliated dealers.

It will be interesting to observe whether these suggestions will be followed next season and what the outcome will be. The men who have labored and cooperated in putting this plan across, whether it be right or wrong, deserve credit. They are not just talking farm relief but are actually doing something to solve their own problems.

Paint Wards Off the Foe—Decay

(Continued from page 3)

purpose some good grade of wall primer. This priming coat serves to seal the wall and prevent any salts which may be in the wall from burning thru and spotting the finished coat. After this priming coat is thoroly dry the finishing coats may be applied. For this work there is a choice of a flat finish or a gloss finish. There are a wide number of beautiful effects that may be obtained in the finishing of a wall and any reliable paint dealer will be glad to tell you anything that you may wish to know about these most attractive duo-tone effects.

It's *fun* to cure meat this way and *joy* to eat it

Millions of farmers and their wives are getting double satisfaction from their home-butchered meat this season. Curing with Edwards Old Hickory is mere play compared with the old smoke-house method. It means eager anticipation of the luscious flavory feasts to follow!

Mr. O. P. Hart of Pocahontas, Iowa, says: "*Old Hickory Smoked Salt is far better than any other curing method I know of*". Mrs. Karl E. Mitchell, Mohawk, Missouri, writes: "*Old Hickory can't be beat for flavor and it saves much time and labor*". Thousands of testimonials like these prove that you, too, will solve your curing problems and get much better meat by using Old Hickory.

Smoke-house troubles, fire risk and excess meat shrinkage banished forever! The drudgery removed! Better keeping qualities, uniform cure and a delicious, "melt-in-your-mouth" flavor that you have never thought possible in country-cured meat!

Handle your meat right. Make sure of your success by using Edwards Old Hickory, the *original* and *genuine smoked salt*. Dealers everywhere sell it. For your protection insist on seeing the registered trade-mark label on every ten pound drum, exactly as it appears here.

WPSC Broadcasts to 4-H Boys and Girls

RESULTS of the 1927 boys' and girls' club demonstrations will be announced thru WPSC, radio station of the Pennsylvania State College, on the following schedule: November 7, A. B. Bingham, assistant state leader; November 21, J. F. Keim, assistant state leader; December 5, J. U. Ruef, assistant state leader; December 19, A. L. Baker, state club leader.

These brief talks will be a part of the regular Monday night farm and garden programs broadcast by the extension division of the Pennsylvania State College, at 8 P. M. each Monday evening. WPSC operates on 299.8 meters and 1000 kilocycles.

Delaware Corn Growers to Hold Show

ALL corn growers thruout the county and state, as well as those farmers who are growing the small grains, soy beans, cow peas, and the different kinds of clovers, will be interested to know that plans are being completed by the officers of the Delaware Corn Growers' Association for the twenty-first annual state corn show which will be held in the State Armory in Dover during the second week in January, at which time $500 in cash premiums will be awarded to those farmers who exhibit the best farm products.

Altho the exact dates for this annual show have not as yet been set, the farmers of the state are being urged to start preparing their exhibit materials early so as to have them ready when the officers of the association announce these dates in the near future.

Each County Has Vice President

At the last annual meeting of the Delaware Corn Growers' Association, which was held in Middletown last January, the following officers were elected for this year: J. W. Hopkins, Lewes, president; J. T. Shallcross, Middletown, vice president for New Castle County; Denny Pleasanton, Dover, vice president for Kent County, and A. M. Tarr, Seaford, vice president for Sussex County. In the absence of Prof. G. L. Schuster, who is taking advanced work in agronomy at Cornell University this winter, C. E. Phillips, of the University of Delaware, will serve in the capacity as secretary-treasurer of the association for the coming year, and all correspondence in regard to the state corn show should be addressed to him at Newark, Delaware.

Tree Bears Healthy Chestnuts

ON A RIDGE about a mile and a half west of Lewistown, Pa., in Mifflin County, chestnuts have been discovered bearing big healthy nuts apparently free of the blight. These new trees, of fair size in height, are growth coming back from natural regeneration, which is known as chestnut sprout.

Burrs from this growth were mailed to the chief of the Department of Forests and Waters at Harrisburg, Pa., and after an examination of the burrs they were reported to show no signs of blight. There are few instances where chestnuts are bearing in the state since the blight destroyed the trees, but there are chances that in time they will come back.

These specimens and the place where they were found have been placed on the state's records. The state is collecting data on chestnut sprout growth.—E. E. C.

"I don't suppose you keep anything so civilized as dog biscuits in this one-horse, rundown, jay town, do you?"

"Oh, yes, stranger," the village merchant responded pleasantly. "Quite a few folks like you come thru from the city, and we aim to have everything called for. Have 'em in a bag or eat 'em here?"

Good cutlery

Can you tell a good kitchen knife from a poor one? You know that a good knife must have the kind of steel in it that holds a razor-like edge, seldom requires grinding, is properly balanced, and has the blade firmly, rigidly secured in the handle.

You cannot judge the cutting qualities of a new knife by its finish or general appearance unless you thoroughly understand the methods of testing steel and of appraising workmanship and design.

You Don't Need To Trust To Luck

There is one way, however, that you can always be sure that the knives you buy will be right, and that is to take the word of your "Farm Service" Hardware Man. His intimate knowledge of cutlery and cutlery manufacturers makes it possible for him to get the right kind of knives and offer them to you with the assurance that you will be thoroughly satisfied. These stores, you know, are the best places to buy cutlery of all kinds, including table silverware, jackknives, shears, scissors, hair clippers and steels and sharpening stones to help you keep them in good condition.

If you need new cutlery, make it a point to find a "tag" store soon.

Your "Farm Service" Hardware Men

AUCTION

November 16th and 17th, 1927
Fond du Lac, Wis.

This is the second sale of O. G. Clark & Company at Fond du Lac.

Choice Grades
500 Holsteins and Guernseys
50 Registered Holstein and Guernsey Bulls

There will be animals ranging in age from baby calf to mature cows. Fresh cows and close springers will predominate in numbers.

The sale will open the morning of the 16th at 10 o'clock and will continue through the 17th and finish the morning of the 18th and 19th.

Write to O. G. CLARK, HETLAW HOTEL Fond du Lac, Wis., for further particulars.

DAIRY

HOLSTEINS Two registered Holstein bulls ready for service. Dam's dam has 30 lb. record, other's dam a big cow testing record. Must be seen to be appreciated. Priced to sell. Herd tested for T.B. and Tuberculin test. C.H. Rothenberger, Worcester, Pa.

CALVES Guernsey Bull Calves from one to twelve months old, also some cows and heifers. Ade Reg. sires and dams of Mat Hoo breed to Federal Accredited herd. Write for descriptions and prices. FRITZLYN FARM, Pipersville, Pa.

Buck & Doe Run Valley Farms—Hereford cattle and Poland China Hogs. All ages for sale. THE SAINT AMOUR COMPANY, Mertzville, Pa.

WHITE LEGHORN PULLETS WANTED—Will trade registered Holstein heifer for five hundred Leghorn pullets 7 mos. old and up. Keystone Holstein Farm, East Petersburg, Pa.

BULLS Registered Ayrshire Bulls and Bull Calves for sale. W. I. W. BECHTEL, Bloody Creek Mills, Pa.

IF YOU WANT practically pure bred Holstein or Guernsey dairy calves, write EDGEWOOD DAIRY FARMS, Whitewater, Wis.

18 GUERNSEY DAIRY HEIFER CALVES Practically pure from high milkers. White face. Attractively priced. L. H. TERWILLIGER, WAUWATOSA, WIS.

GUERNSEYS Registered Bulls, 8 months old, also grade Heifers. Accredited herd. S. W. TOWNSEND, Coatesville, Pa.

SWINE

300 FEEDING PIGS all to seven weeks old at $4.00 each. These pigs are grown on free range with access to growing grains. INDIAN CORN HOG FARM, Oysters, Pa.

400 CHESTER WHITE, Duroc and Berkshire Pigs 8 weeks old, $4.00; 9 weeks old, $5.00. Heads to ship in Sept., Oct. & Nov. High-grade & purebred pigs, $6.00 each. Oaks Dairy Farm, Wyalusing, Pa.

SPOTTED POLAND CHINAS—Fine lot of Sept. pigs by Son of Giant Mogul, the 1250-lb. boar. $15 each, $25 pair or $30 per trio, registered free. A. M. KENNEL, R. D. 2, Honey Brook, Pa.

POLAND CHINAS Registered, Purebred Big Type Poland China Pigs. Prices reason able. C. L. LEBO, Womelsdorf, Pa.

BERKSHIRES Two excellent Boars, 7 months old. W. E. McSparran, Furnace, Pa.

HIGH GRADE CHESTER WHITE and Berkshire Pigs 6 and 8 weeks old, $4.00 and $5.00 each. I. LEO ROUSE, DUSHORE, PA.

Coon Hound One finished coonhound prepaid to you on trial. FRED HARMON, Box 264-D, CALHOUN, GA.

Hunting Hounds HUNDRED HUNTING HOUNDS CHEAP. Catalog. Kaskaskennels, AW-85, Herrick, Ill.

GOATS

GOATS Wonderful winter milkers soon fresh. Saanen, Toggenburg, Nubians, Alpines. Fine bucks, valuable does. Reasonably priced. Goldsboro, Mohnton, Pa.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW HAS SPELLS.—I have a cow that seems to get a cramp once every week or ten days. When she takes the first few mouthfuls of mash she closes her eyes and turns her head over. She gets stiff all over and sometimes falls in the spell. The spell lasts about one minute to a minute and a half.—C. L., Egg Harbor City, N. J. This is an indication of a condition involving the nervous system, and evident when food passes the pharynx and into the stomach it involves the reflex nervous system and may possibly be of a hereditary nature. Treatment may not be of any material value. It would be well, however, to feed a laxative diet, following the administration of one pound of Epsom salts.

ONE QUARTER NOT NORMAL.—I have a cow that has one bad quarter. At night it is hard and gives no milk. The next morning the milk is stringy.—H. S. E. Cordova, Md. Try bathing the quarter with warm water for a sufficient length of time to insure the warmth penetrating the udder. Repeat several times daily. Milk the quarter frequently, thus relieving the quarter of the secretion that accompanies the inflammation. Feed a dry ration to cut down on milk flow until the quarter has improved. Care should be taken to prevent the spread of the infection to other quarters or to other animals. This can be prevented by washing the hands in an antiseptic solution and by separating the cow from others in the herd.

A census taker called at a farm house and a woman answered the door.

"How many in your family?" asked the census taker.

"Five," answered the woman peevishly. "Me, the old man, one kid, a cow and a cat."

"And the politics of your family?" inquired the enumerator.

"Mixed," came the short reply. "I'm a Republican, the old man's a Democrat, the kid's wet, the cow's dry, and the cat's a Populist."

Bill Sweeney says an Irishman saw a steam shovel for the first time the other day.

He looked at it in operation for a while and then remarked:

"Begorrah, it sure can dig out a lot of dirt, but it can't vote."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here but if displayed or illustrations used must run in display advertising columns at commercial advertising rate ($5 cents per agate line).

Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry Breeding Stock, Eggs, etc.) not accepted at word rate. Send for special folder.

Send All Orders To
PENNSYLVANIA FARMER 261 S. Third St., Philadelphia

LEGHORNS

WHITE LEGHORN eggs and chicks—big discount if ordered now for spring shipment. Sired by 200 to 293 egg males. Flock bred 24 years. Winners 20 egg contests. Shipped C. O. D. If catalog, special price contests. Shipped C. O. D. If catalog, special price list free. Thousands of pullets, hens, cockerels at low prices. George B. Farris, 960 Union, Grand Rapids, Michigan.

BRONZE TURKEY TOMS for sale. Of the world famous Goldbank strain. Hundreds buy this blood each season. There's a reason. Reasonable prices on request. George Zeppay, Box 225, Charleroi, Pa.

SELECTED R. C. White Leghorn Pullets—April and May hatched. Raised on free range, from "heavy laying" strain. $1.50 each. C. L. Taylor, Wyalusing, Pa.

Sore throat waits here also

In the THROAT and nose more than 50 diseases
have their beginning or development. Some, of mild character, yield to an antiseptic. Others, more serious, do not. At the first sign of an irritated throat, gargle frequently with Listerine, and if no improvement is shown, consult a physician.
watch your throat!

Gargle when you get home

After long exposure to bad weather, after sudden changes of temperature, after mingling with crowds—gargle with Listerine, the safe antiseptic, when you get home.

This pleasant precaution has nipped many a cold and sore throat in the bud, before they became serious.

Listerine, being antiseptic, immediately attacks the countless bacteria that lodge in the mouth and throat where so many colds start.

It is important, however, that you use it early—and frequently.

Most of the fall and winter months are "sore throat months," and for your own protection use Listerine night and morning. It is a good habit to acquire. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

SOUNDS LOGICAL
The great success of Listerine Tooth Paste has proved that the idea of a scientific dentifrice at 25c (for the large tube) is a popular one.

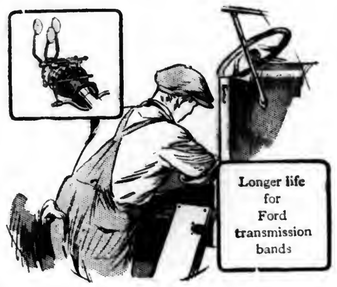
Comfort on a cold rainy evening

That the European peasant is down-trodden is the mistaken opinion of many Americans. *Page 3.*

A scientific achievement!
New Ford economies–New Ford smoothness



The achievement of the Mobiloil engineers in producing the improved Mobiloil "E" does not lie in any *one* characteristic of this finer Ford lubricant, but in its ability to cut operating costs in so *many* directions.

With the improved Mobiloil "E" in your Ford crankcase you insure smooth starts and smooth stops. And more—you definitely extend the life of your transmission bands. The improved Mobiloil "E" provides this new margin of safety in driving your Ford

Still more mileage between carbon removals with today's Mobiloil "E"

In any car carbon is a costly menace. Carbon accumulation cuts power. It jumps gasoline consumption. Oil consumption, too. And carbon removal jobs are a real item in operating expenses.

With today's Mobiloil "E" you will experience unusual freedom from carbon. At the same time your transmission bands will keep soft and pliable. The combination of these *two* Ford advantages is unique.

Cheapest lubrication

Mobiloil "E" makes no claim to be a cheap oil. It costs a few cents more per quart than ordinary oil. But Mobiloil "E" gives you lower cost per mile and per year. *That* is what counts. Thrifty Ford owners never say that Mobiloil "E" is high-priced. They have had too much experience with the oil itself. Mobiloil "E" contains an extra margin of safety to meet every lubricating need of the Ford engine, the Ford clutch and the Ford transmission.

Fill your Ford crankcase today with four quarts of the improved Mobiloil "E". The genuine Mobiloil "E" can be obtained in original one-gallon sealed cans or by the quart from Mobiloil dealers.

New smoothness of operation and full power will be immediately apparent. And road tests have proved that you may confidently expect less carbon, and a longer life for your Ford engine.

The year around use Mobiloil "E" in your Ford car and truck. In your Fordson tractor use Mobiloil "BB" in summer and Mobiloil "A" in winter. The nearby Mobiloil dealer will give you a substantial discount on barrel and half-barrel orders of Mobiloil.

YOUR guide—If your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors. And remember that . . .

609

automotive manufacturers approve it!

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc."), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Austria's Farmers Live in Villages

The Farm Buildings and Stables Are Located at the Rear of the Peasant Home

By H. G. NIESLEY

THAT the European peasant is a down-trodden individual is the mistaken opinion many Americans have. On my recent trip I was particularly fortunate in getting first-hand information on the conditions and habits of the peasant in Austria. The peasant is nothing more than a small farmer, and as I asked one of my hosts concerning the size of the peasant farm, he replied that farms of less than 100 acres are considered peasant farms. Were we to apply this classification to America and Pennsylvania I fear there would be a lot of our farmers called peasants. There are 650,000 farms in Austria below 20 hectares (50 acres) in size.

Have Farm Block

The peasant in Austria holds a very important position. They told us of a farm block (as we would call it in America), in their little country, composed entirely of peasant farmers who exerted a very important influence on the government. The President of the Austrian government, Michael Hainisch, is considered in the home land as a peasant farmer. In talking to officials of the Ministry of Agriculture in Vienna, we were told of his having the best cow in Austria with a production of 5940 liters (19,778 pounds) of milk.

Looking now into the more or less rural homes of the peasant I must tell you of a little village about 40 miles from Vienna where we saw how he lives. I say village, because the custom in this section of Europe is for the peasant farmer to live in small villages. One particular home was that of an intelligent farmer and his wife with three children taking care of the home. The building was small, fronting on one of the main streets of the little village. The back part of the buildings consisted of a series of stables; the first being the horse stable, next to it the cow stable, following that the poultry plant, and finally the pig pen. These stables were dark and rather poorly ventilated. Two horses, three cows, about twenty-five chickens and four pigs constituted the livestock of this peasant home.

We Visited a Peasant Home

Our interpreter, upon introducing us to the wife of the peasant, asked for permission to go thru the house which was granted with considerable hesitancy due to the bashfulness on the part of this peasant woman. However, we were given the opportunity and were intensely interested in seeing a four-room house. The living room compared favorably to the more or less common living rooms in Pennsylvania farm homes. The kitchen was used for food preparation and dining purposes. Then there were the bedroom where the little family slept and another room used for storage purposes. This, we were told, was quite representative of the peasant homes of this particular section of Central Europe.

What about the farms of these peasants? Here I was both interested and surprised to find that some are forced to travel as much as 10 or 15 miles to their fields. The average distance from the village to the field or farm is about 1½ to 2 miles. It is possible to travel for miles and not see any farm buildings because the land is all cut up into small strips owned by the peasants who live in the villages.

The commons, as we would call them, are plots of fenced pasture land, located adjacent to the village, where the peasants pasture their milk cows. All cattle are placed in this common pasture during the summer.

Top—Horse stable, cow stable, and chicken house in the back yard of a peasant farmstead

Right—A four-week old Simontalle calf

Bottom—Oxen are the most common beasts of burden. Some farmers work one-half their oxen while the other half are allowed to gain in flesh.

All thru Austria, of course, in addition to peasant farming, there are other farming operations where large plots of land, from 1000 to 10,000 acres, owned by the nobility, are leased and rented to others for farming. In visiting one of these farms we were met at the station by the farm manager, riding in a top buggy drawn by two horses, who took us all thru the place. Before leaving the farm office I secured from the manager some figures on the results of his farming operation. I found that on this farm of nearly 3000 acres the average yield of potatoes was 220 bushels per acre (sold last year at an average price of 50 cents per bushel), the average yield of wheat was 39 bushels per acre (sold at $1.27 cents per bushel). The price of wheat is fixed by the Grange Exchange and the farmers are paid on test.

The labor employment is very high on these farms; 105 men, 50 women and 15 children are carried on the ordinary payroll of this farm. The milk production cost was 3½ cents per quart. When asked what rent was paid to the Prince who owned the farm, the manager said that it amounted to 285 kilgrams of wheat per hectare (this equals a little over $5 per acre).

Finds New Use for Blue Glass

Interesting customs, as well as superstitions, are always observed in these old countries. The dairyman on one of the Austrian farms declared that barn swallows were kept particularly for their eating the flies in the cow stable and that blue glass was used in the cow stables for fly prevention.

Wages, of course, are much lower in Austria than in America, largely because labor is so plentiful. Upon request my interpreter questioned a teamster on one of the farms as to his wage. His reply was that he received as follows: Two shillings and two grossen (about 29 cents) per day and board. He received in addition from the land lord one liter of milk a part of a field 1400 square millimeters in size(or about one-third of an acre), grain for his swine to the amount of about 30 kilograms (66 pounds) of bran per month, and 5 kilograms (11 pounds) chicken feed per month. You can see this makes a rather complicated wage for the laborer. However, we were told that the average daily wage was about 5 shillings per day for men (71 cents), and about 3 shillings per day for women (43 cents).

Favorable Toward America

The attitude towards the United States is very favorable, which we were glad to learn. Our interpreter, an ex-colonel in the Austrian Army, while returning from the rural section one day, remarked that they owed the Americans very much for aid received during the war. "How was that, Colonel?" I queried. Whereupon, he replied that American relief funds kept alive 300,000 babies and boys and girls in Austria for four years during the war. As we moved into the city of Vienna, looking from the train window he pointed out a kitchen where America's food fed 30,000 children daily for four years.

The most livable quality that any human being can possess is tolerance. Tolerance is the vision that enables us to see things from another person's point of view. It is the generosity that concedes to others the right to their own opinions and their own peculiarities. It is the bigness that enables us to let people be happy in their own way instead of our way.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The sunshine of life is made up of little things: a little word that is kindly spoken; a little deed that is kindly done.—Benjamin Franklin

Armistice Day

NINE years ago this week the whole world went almost mad with glee over the news that an armistice had been signed, ending the great World War. Never before had a burden,—a crushing, killing burden, been lifted from so many hearts and shoulders, and never before were so many people in unison in thought and feeling. The world was again at peace, and never again, so it thought, would it take up arms in deadly strife. As the whistles blew and the bells rang, women wept with joy and men slapped each other, even as strangers, upon the back in exuberant glee. The last great war had been fought and the human race had learned its lesson forever!

Only nine years, and yet there are signs that we are forgetting. Already there is much talk of the "next war." Nations are disagreeing and snarling at each other. Greed and financial differences are everywhere stifling the better emotions aroused by the armistice. In fact, the world is now better armed than it was in 1914, and there is insistent clamor for still greater preparation. Where will it end? If peaceful methods of settling differences between peoples are to be substituted for war, it must be accomplished by the common people,—the class which bears the arms and the cost of war. It will never be done by the war makers.

Comments on the Week's News

EVERYONE thought, or at least was hoping, that the last chapter had been reached in the oil scandal when a jury was selected and the trial begun in the criminal court to try Sinclair and Fall. But so rotten is the whole affair that the judge ordered a mistrial last week because of alleged efforts to tamper with the jury. The prosecution believes it has evidence of improper efforts to establish contacts with the jury, said efforts made by a detective bureau at the behest of Sinclair. It is reported that one juror made the remark that he expected soon to have an automobile "as long as a block."

♦ ♦ ♦

It seems by the papers that the most modern of modern marriages has taken place in New York City, the logical place for it to happen. A well-known author, Hendrik Van Loon, who has been married twice before, and Frances Goodrich, an actress, married only once before, are the experimenters. The chief articles to the agreement are: They will live apart, with no common home and no sharing of money. Neither is to help or hinder the other. There is to be no association except thru mutual agreement. No doubt the principals will get some advertising out of it, but that's about all they will get.

♦ ♦ ♦

The much-talked-of associations and coalitions of nations in Europe do not bode well for future peace of the world according to some of the wise men. Already, some have prophesied war with the United States within the present generation. Thomas A. Edison is one of the latest prophets of evil omen. In arguing for the establishment of an independent rubber supply he said: "Don't make any mistake about that war. It will come. Sooner or later Europe will combine against the United States, and the first thing they will do will be to cut off our rubber supply."

♦ ♦ ♦

As this is written but two days of the 1927 hunting season have elapsed. But already the newspapers report the death of six hunters and the wounding of a score of others. In the interest of game protection the primitive instinct in man to kill is crowded into a short period. This limitation sends a whole army of men out into a few places at one time, many of them without sufficient experience in the handling of guns. The inevitable result is accidental slaughter of men. Is the game worth the candle?

♦ ♦ ♦

How much is a human life worth? We do not have at hand the number of fatalities last year, but we have the estimated value (?) of the game killed in Pennsylvania. The total value of birds and animals killed is given as $5,559,743.50. But dividing the sum by the number of each kind of game we find that the estimated value per pound is more than livestock raisers get for meat birds and animals. For instance, the report places a value of $36 on each buck deer, and $30 on each doe; elk are estimated at $150 each, bear $40, rabbits $1, squirrels 50 cents, coons $4, and quails at $1.50 each.

♦ ♦ ♦

According to the figures of the U. S. Department of Labor, wholesale commodity prices are again on the up-grade. A total of 550 articles of commerce are considered in the list of commodities making up the report. A graph showing the rise and fall of commodities shows that the cycle of rise and fall extends over two years between high points and also low points. The upward turn began last June, and if past history is repeated they may be expected to keep on rising for the next two years. Food and clothing materials are among the things considered.

Consolidated Schools

ALTHO we hear much less said about the rural school consolidation subject than we did a few years ago, the number of such schools is increasing rapidly in Pennsylvania. According to a summary published in the Pennsylvania School Journal, every county in the state except one, York, now has one or more consolidated schools. In some counties nearly the entire school system is of the consolidated kind. The greater part of the development has been made since 1909, and every session of the legislature gives new impetus to the movement by making it either more incumbent or more economical. During the term of 1925-26, 22,224 pupils were transported to consolidated schools and 3953 were transported to schools because the local school had dwindled to fewer than ten pupils.

Doctor Atkeson on Taxes

DOCTOR T. C. ATKESON, who, until last year, was the Washington representative of the National Grange at Washington, has written an article for the National Farm News which we think contains much sound sense. After emphasizing the fact that there is a real farm problem, altho Dr. Atkeson was against radical farm relief measures, he closes with the following comments:

"Instead of looking to Congress for relief, it is increasingly evident that farm relief must begin at home. It is largely up to the farmers themselves to readjust their operations to the present distressing conditions. Costs of production have increased out of all proportion to the present prices, and our taxes have doubled and trebled and quadrupled in the last fifteen years. Farm taxes in some states have now become a fair rental for the land, and in many cases the nominal owner has, in fact, become a tenant of the state.

"Taxes must be paid, just or unjust, whether of our contriving or of others. The steadily mounting rate of local taxation since the war is the cause of the major portion of the farm problems. Also it is the one thing that is open to relief by the farmers themselves!

"We cannot go on increasing taxes without bankrupting the taxpayers. Tax spenders are on the increase, and there seems to be no possible relief if the voters will not take the matter in hand and stop the reckless money-spending that is going on everywhere.

"History teaches that where agriculture flourishes the nation is prosperous. It also teaches that where sports and amusements flourish the nation has decayed. We have only to look around us to see that agriculture is not prosperous, but that sports and amusements flourish.

"We have faith that the clouds of the last few years are lifting and that the sober good sense of the American people will find a way out."

Editorial Sidelights

MORE history. Tonight we stood at the foot of State Street, in Erie, Pennsylvania, where that thoroughfare seems to be built out into Lake Erie like a pier. By the street lamp light we read a sign worded about as follows: "Brig U. S. S. Niagara, Flagship of Commodore Perry, United States Navy, Battle of Lake Erie, 1813."

The sign was posted on a two-masted ship lying among an assortment of barges, small power boats, etc. The worn gangplank was down so we went aboard the famous old craft, one of the fleet hastily built of green timber by Perry and his men so that they could go out and meet the challenge of the British fleet on the Great Lakes during the War of 1812.

That Perry was able to drag his guns up across the mountain wilderness of Pennsylvania, carve out of standing timber a fleet of ships that would float, and then go out and beat the British in a bitter naval battle, has always been one of the marvels of history to us. Surely he had a right to feel as he must have felt when he sent that famous message: "We have met the enemy and they are ours."

The Niagara, as she lies in Erie harbor today, carries twenty old-time muzzle-loading cannon, ten on each side. She is about 120 feet long and the one open deck, where the guns are mounted, is about thirty feet wide at the broadest place.

We hope the historical societies of the state will give this great old ship the attention it needs, so that it shall be preserved as long as the Republic it helped to save.

OPTIMISM SHOWN

Report Conditions Better—Auto Liability Law May Be Issue Jardine Will Stay—Should Plant Soy Beans.

Washington, D. C.

REPRESENTATIVES of the fifty or more joint stock land banks attending the ninth annual convention of the American Association of Joint Stock Land Banks in Washington, October 31 and November 1, were slightly more optimistic in their reports of agricultural conditions than in recent years.

Ask Flood Control Vote

Recommendations that the federal government accept full responsibility for the control of floods on the lower Mississippi are being sent out from the United States Chamber of Commerce to local units for their approval by a referendum vote.

May Help Sugar Beet Growers

A movement is under way to secure the withdrawal of the 20 per cent preferential tariff on Cuban sugar. If successful this move would prove helpful to the American sugar beet growers.

Auto Insurance Law Becomes Issue

Following the action of Massachusetts, it is predicted that a compulsory automobile liability insurance law will be an issue in many states in the near future.

Attack Cattle Testing Law

The constitutionality of the Minnesota cattle testing law is being attacked in the United States Supreme Court on the grounds that it conflicts with other laws and is in conflict with the Fourteenth Amendment. This act relates to the testing of cattle for tuberculosis and authorizes county boards to appropriate money to aid in paying for the testing and reimbursing the owners.

Denies He Will Leave Cabinet

Secretary of Agriculture Jardine denies that he plans to resign from the President's Cabinet about December 1, as reported in the daily papers. He says he has no expectation of leaving the Cabinet in the near future.

Would Control Oleomargarine Trade

A syndicate has been formed in Europe to control the world trade in oleomargarine, according to reports received by the Department of Commerce. Statistics show that the consumption of margarine in European countries is large. Denmark, the leading dairy country, consumes 45½ pounds of oleomargarine yearly per capita.

National Forests Remunerative

The national forests are proving to be the most remunerative property possessed by the federal government. Total receipts of the government forests from July 1 to October 1, this year, amounted to $1,338,569 as against $1,228,478 during the same months of 1926. Sales of timber to be cut under Forest Service supervision brought in $1,695,905.

Farm Bureau Holds Exposition

Last year for the first time the American Farm Bureau Federation held an educational agricultural exposition at the Sherman House in Chicago in connection with the annual meeting. It was so successful that a larger and better exposition will be held in connection with the annual convention of the federation in Chicago, December 5, 6 and 7 this year.

Soy Bean Supply Inadequate

There is room in this country for a vast expansion of soy bean acreage, according to W. J. Morse, soy bean specialist in the Department of Agriculture. He says that soy bean growing is a branch of agriculture in which the national supply does not meet the demand.

Want Agency to Purchase Rubber

Efforts are being made by representatives of the automobile industry to interest the farm organizations in a move to secure an amendment to the Webb-Pomerene act which will permit the rubber companies to combine under a single agency for the purchase of raw rubber of which Great Britain and Holland now have a monopoly.

Automobile Not a Luxury

Chester Gray, who represented the American Farm Bureau Federation, recommended the abolition of the automobile sales taxes on the ground that automobiles are a necessity and not a luxury to farmers.—E. E. R.

RACE WITH JACK FROST

Contractors Urged to Finish as Many Road Links as Possible—Pine Blister Rust Found by School Pupils.

Harrisburg, Pa.

STATE Highway officials are running a race with Jack Frost in every county of Pennsylvania, contractors as well as foremen of the state's own crews being urged to their utmost so the maximum of construction can be finished before winter sets in. Thus far over 500 miles of hard road have been finished by contractors and it is expected to add many more miles to the 1927 record when the totals of the state's crews are counted up. Recent mild weather had enabled rapid progress in the lower counties of the state. By December it is probable most of the "links" to connect existing improved roads will have been built.

Rural Cars Listed

If what is said about the Capitol is correct there is quite a brisk registration of automobiles for 1928 licenses from rural sections. The State Bureau in charge started out unusually early to get cars registered with the idea of heading off the annual December rush and the response has been gratifying.

War on Weeds Again

The drive of the state and federal officials against the corn borer, which has resulted in a remarkable compliance with regulations in northwestern counties, is expected to be duplicated in the weed destroying line.

Valuations Under Study

Valuation of properties for school taxation purposes was one of the chief subjects for discussion at the annual conference of county school superintendents and normal school chiefs here a few days ago and attention was directed to the lack of uniformity and other abuses.

School Children Help

Net results of the turning in of pine leaves found by school children are that the tree disease has been discovered in thirty-six counties or half of those in the Commonwealth. The Departments of Agriculture and Forests and Waters started out some months ago to interest pupils in the blister rust and the youngsters have proved a valuable aid in the crusade.

Assist in Forest Fire Prevention

More than ordinary interest attaches to the meeting to be held here next month to devise ways and means to assist in forest fire prevention. In addition to state officials there will be present men from the state service, the railroads, lumber companies, water companies and others interested in timber.—T. C.

NO TRESPASSING!

Many Signs Appearing Thruout State—Fruit Goes into Storage—Will Replant Forests—Lettuce Price Low.

Trenton, N. J.

THOUSANDS of reward signs, against trespass, are now appearing thruout New Jersey as the membership drive of the New Jersey Federation of County Boards of Agriculture develops. Each member, as he signs up with his local board, State Federation and the American Farm Bureau Federation, receives one linen reward sign offering $25 for arrest and conviction for petty larceny on his place.

Feed Dealers Organize

The outcome of the fifth annual meeting of New Jersey feed dealers at the Agricultural College in New Brunswick in late October has been the formation of a permanent State Feed Dealers' Association. Officers and a board of governors have been elected. R. Franke, of Newark, was elected president; Reeve Hadden, of Hamburg, vice president; H. J. Samuelson, of Toms River, secretary, and Benjamin Atwater, of Red Bank, treasurer. The state has been divided into seven districts with a governor in charge, the seven governors comprising the board of the state association.

More Fall Hatching

In some sections of South Jersey, fall hatching of chicks is reaching almost a general practice. The chicks raised at this season are designed primarily for the spring and early summer broiler trade.

Discuss Export Certificate Plan

Fruit growers in Burlington, Camden and Gloucester Counties are discussing the question of extending the Export Certificate Plan to apply to New Jersey apples. Under this plan only fruit complying with the laws of the country into which it is shipped may be exported.—W.H.B.

Warehouse Sweet Potatoes Inspected

The State Department of Agriculture is maintaining an inspection service on sweet potatoes from the warehouses and those that come up to the specified grades are marked as "U. S. Grade No. 1, inspected by the State Bureau of Markets, New Jersey Department of Agriculture."

Lettuce Growers Face Loss

New Jersey lettuce growers are facing a heavy financial loss due to the extremely low prices. Growers are not receiving the cost of production on large amounts of lettuce that is now reaching market.

Move Fruit into N. J. Storage

Fruit growers in Delaware and Virginia have moved to New Jersey storage houses immense quantities of fruit. One house reports the arrival from the Shenandoah Valley of 140 carloads of apples. This fruit is held in cold storage awaiting a rise in market.

Ship Fruits Beyond Quarantine

New Jersey moved over 2000 carloads of fruits and vegetables to market beyond the Japanese beetle quarantine lines during the past season. A total of 1,911,720 packages were inspected and found free of the insect pest.

Representatives Held Responsible

The New Jersey courts have ruled that in the future representatives of transportation companies will be held responsible for violations of the Japanese beetle quarantine regulations.

Offer Forest Seedlings

The Department of Conservation of New Jersey is offering to the farmers of the state seedling trees for future forest plantings. These trees have been grown by the State Forestry Department to replant a part of the forest reserves of the state.—A. K.

A DIFFERENT MISS AMERICA

CRITICIZES GRANGE

Prof. Felton Says Organization Does Not Make Full Use of State Agencies—Groups Vie in Dramatics.

Ithaca, N. Y.

THE weak point of Grange work, in Prof. Felton's observation, is in not making fuller use of the extension service, state and county agencies. He referred to the State Department of Health and the state loan libraries. Other services not fully used are the child training work of the Home Bureaus which has already been carried on intensively in 13 counties and will be in five new ones this year; the instruction in recreation and dramatics. Too little cooperation and support of junior project work might also be cited as one place where the Grange has not boosted the state's coming farmers as it could.

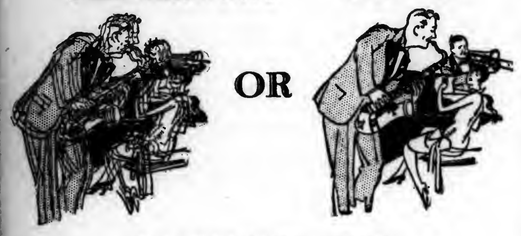
State-wide Rural Dramatics

The state has been divided into four districts, in which elimination contests were held at the county fairs to determine the best one-act plays produced by rural groups. The final tests will be held at Ithaca during Farm and Home Week in February.—M. G. F.

FADA Radio

Which would you rather hear?

The old-time **The new**



OR

Fada has startled both the radio and the musical world with the crowning achievement of Fada Harmonated Reception. And this, you probably know, is the effect of radio harmonization in a Fada receiver and a Fada speaker, to a point formerly held impossible by experts. To you it means that Fada reproduces the very finest harmonics or overtones, as well as all the fundamental notes of the musical and vocal scale, throughout the whole range. Like the instruments in a well-balanced orchestra, each electrical and musical function co-ordinates perfectly with the others, resulting in radio realism beyond your highest hopes. Any Fada dealer will be glad to show you what a great advance Fada has made with Harmonated Reception. But please remember that only a Fada Receiver with a Fada Speaker gives you real Harmonated Reception.

F. A. D. ANDREA, INC., Long Island City, N. Y.

Licensed under Hazeltine, Latour, R. C. A., Gen. Elec. Co., Westinghouse Elec. & Mfg. Co., Assns. Tel. & Tel. Co., patents only for Radio Amateur, Experimental and Broadcast Reception

There are five Fada models—all Neutrodyne receivers—priced from $95 to $400

The Fada Special
6 tube—3 radio frequency stages—detector—2 audio amplification stages. Shielded. Equalized amplification.
$95
(For battery, or A. C. operation direct from light socket.)
The Fada 17" Cone
17-in. free-floating cone—permanent Farkerized magnet. Antique bronze finished tri-foot.
$25

GET A

Leola Self-Feeder on Trial

WE WILL ship you a feeder at no cost to you, freight prepaid. Give it a thirty-day trial and if not entirely satisfied, we will pay the return freight. We do not ask you to pay one cent until you have tried a "LEOLA" Hog Feeder.

WHAT STATE COLLEGE FOUND

Two lots of fifteen hogs each were fed for ninety days on a ration of cornmeal, buckwheat, middlings and tankage, self-fed to one group and hand-fed to the other. Here was the result:

	Self-Fed	Hand-Fed
Gain per day	1.3 lbs.	.85 lbs.
Cost per cwt., rain	$5.38	$7.17
Profit above feed cost	$7.61	$3.18

This test shows what a Self-Feeder will do for you.

H. M. STAUFFER & SON,
Box A-6, LEOLA, PENNSYLVANIA

TELL the advertiser you saw adv. in Pennsylvania Farmer.

OUR names will not be enrolled with the 400-Club as potato raisers this year. Well, we did not expect to be, so we are not disappointed. We planted only five bushels of seed,—seconds from last year, —and we did not spray, because we have no potato sprayer and the amount was too small to pay to hire one. As a consequence, the tops died early. But we have enough for all connected with Neshaminy Gardens and that is all we are interested in this year. They are nice potatoes of fine quality.

◆ ◆ ◆

THE day after digging our potatoes I made a trip into Chester County to see a tractor demonstration, riding out to the farm with County Agent Vandegrift. On this farm I saw 6000 bushels of potatoes which has just been dug from 15 acres. Again I was impressed with the truth of what I have been preaching for several years, that it does not pay any farmer in these times to plant potatoes unless he does it on a scale big enough to warrant owning a full equipment so that he can follow out the schedule that brings paying crops.

◆ ◆ ◆

MR. VANDEGRIFT says that about ten farmers in Chester County will make the 400-bushel club this year. He recalled that he was ridiculed the first time he ventured to tell his farmers that 200 to 250 bushels per acre might be raised in that county. He was told that 80 to 100 bushels was a big crop,—all that anybody ever did raise or could raise. But the gospel of right methods has been preached there until the "impossible" has happened. Potato raising has become a business for specialists. Big crops do not depend, as was once supposed, upon locality, soil and climate, but upon preparation of soil, right fertilization and intensive spraying.

◆ ◆ ◆

"HOW about those boys at Neshaminy Gardens?" asks a correspondent. "You have not mentioned them lately." Well, they are busy as nailers, as lively as crickets, and growing like the weeds in the crops. It might be construed that I was prejudiced in their favor if I should say all I think about them. But I will say this much: There aren't any others just like them.

◆ ◆ ◆

OUR season's farm work is about over for the year. We have yet most of the celery and some cabbage, and, of course, the hens to take care of, but the vegetable trade is ended. The last ripe tomatoes were sold November 2nd. On the whole, it has been a fairly good season. But it was in the nature of a competitive race all the year,—a contest between our efforts and insects, disease and unfavorable weather. We got off to a bad start because of cool, wet weather and there was a falling behind in the third lap (August) but we finished at the pole in good shape. We note only two items which were partial failures, — beans and cantaloupes. Of course, we had some of these, but made no money on either.

◆ ◆ ◆

WE GOT good prices for every line of our products this year. Nearly everything was sold at retail on a delivery route and at the roadside market. By good prices I mean prices which made it more profitable to sell to consumers than to commission men. But we hope to do better next year, because we are in better shape. Ever since the land was bought five years ago we have been working at a disadvantage because we had no house and nobody on the job all the time.

◆ ◆ ◆

And another thing. I have not been satisfied with the kind of weather prophecies given out. I bought a barometer the other day and shall make my own weather forecasts after this.

"CONDITIONS in general," states the November 1 report of the Bureau of Agricultural Economics, "are rather reversed from last year. The cotton belt, the northern wheat belt, the cattle states, the northwesern apple districts, are all in better shape."

The Cheerful Plowman

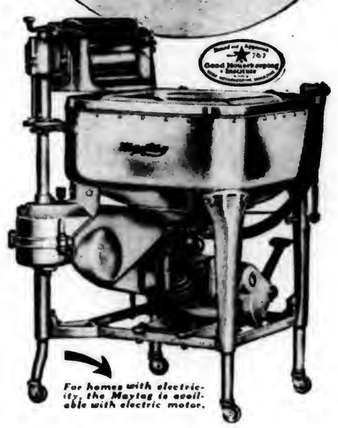
False Information

IT PROPHESIED fair weather, this weather chart of mine, it said. "Delightful zephyrs with skies supremely fine!" Depending on its message we're ready for a spin. I'm togged in fancy trappings, high colored, chic and thin; my wife in gayer dressings with hair superbly done depended on this message that promised her the sun! Now here we are, poor sinners, all fussed and dressed to kill, all trimmed with great precaution and dolled with finest skill, and, by the horns, it's raining with all its might and main, since Noah started sailing there's been no stronger rain! It's simply raining torrents, the cistern's more than full, it soaks the horses' whiskers and all the nannies' wool.

Last Sunday we consulted this wretched chart, and say, he prophesied a rainy and most abhorrent day; that day we'd planned a party down yonder in the woods where we could eat our dinner and wear our picnic hoods, but when we read that water in torrents was in store we changed our plans and lingered inside the parlor door! Now listen, not one whimper of rain at all was seen, the skies shone sweetly, brightly, all day the sun was clean!

That should have been a lesson, but here, again, today, we harkened to the message ordered rain away; we dressed up bright and early in all our happy duds and look, it's raining oceans of unremitting suds! That weather chart's a fakir, it is not worth its space, no truth can be detected behind its open face; it says its say unthinking, it never in its life has met the weather maker nor chatted with his wife! Not while I live, by ginger, not while I have my brains, will I again consult it to learn about the rains; not while I'm sane, by crickets, when planning for a spree, will its confounded message have any pull with me!—J.E.T.

The New MAYTAG Gasoline Multi-Motor Washer



"Step On It" and away it goes!

YOU will marvel at the New Maytag Multi-Motor Farm Washer. Nothing to compare with it has ever before been offered to the rural housewife.

Step on the pedal and away it goes. Gives the same, sure, even power as an electric motor, and plenty of it. The engine and starter of the Multi-Motor are in one unit —so compact that it is interchangeable with the electric motor by removing only four bolts.

You must see this new Maytag to appreciate it. A washer far in advance of the times—different, better — an outstanding achievement in self-powered washers.

Wash with this New Maytag free

See the new Roller Water Remover, with semi-soft, never-crush rolls; the new Automatic Safety Feed Board that gathers in the clothes without getting your hands near the rolls; the seamless, one-piece cast-aluminum tub and marvelous gyrafoam action that washes everything clean without rubbing — even grimy work-clothes and overalls. Does a big washing in an hour or so.

Write or Phone the nearest dealer for a Maytag, powered either with gasoline or electricity. If it doesn't sell itself, don't keep it.

LEADCLAD FARM FENCE

Send for this catalog of better farm fence and roofing.

ED Strong said down at the County Fair last week that some fence is like "gold bricks"—shiny and nice when it's new but the shine doesn't last long. First thing you knows it wears off and there's more fencing to be done. Ed uses Leadclad fence because he know it lasts years longer. The heavy coating of PURE LEAD makes Leadclad stay strong and rust-free long after ordinary fence has rusted away.

Write today for samples and prices.

Wet Weather Creates Demand for Greens

A RECENT issue of the "Weekly Market Review of Fruits and Vegetables" carries the news: "At $7-$8 per ton for domestic type(cabbage) and $11 for medium to small Danish stock, the New York country dealers were not greatly encouraged." The choice of those last words certainly must be conservative. Pennsylvania growers situated near many of our markets at least have the advantage of freight and handling charges over and above these quotations. In case f. o. b. prices go lower our advantage remains. If New York growers can make out on such returns—I wonder if they can—there is hope for us, provided we are not trying to grow this crop on high-priced land and when we regularly secure high yields. Ten tons of late cabbage per acre at $15.00 may pay us ordinary wages plus a little something for use of the land. Fifteen tons at the same figure leaves a nice little profit. Even higher yields are within reach, twenty tons fairly common. The record is over thirty.

• • •

This morning, while in town with a load of vegetables, I bought two of the best rubber coats I could find, long enough so rain water dripping from the coat bottoms will not run into boot tops. To complete the outfits two large rubber hats were included. The investment ran about twenty dollars. It is good health insurance when rush orders must be filled on rainy days or when some crop urgently requires to be harvested.

• • •

Apparently the demand for cabbage, spinach, etc., is greater in raw, rainy weather. We have just experienced a three-day rain and I know we have sold more cabbage in that time than during the previous week.

• • •

The last of the new baskets, bought by the carload, were used a week ago. The season being so far gone we have been getting along, or trying to get along, with second-hand packages. It is quite a comedown. Altho the second-hand ones cost less it takes valuable time to gather them up. Many are of disreputable appearance. Some break. The actual saving is little or nothing. That neat, attractive note given by new baskets is lost.

• • •

Has soil been put away for early spring plant growing? Rainy and freezing weather may come almost any time.

• • •

Where a lot of celery is to be stored and must be lifted with the roots, it is a big job to loosen all the plants with a shovel or spading fork. A regular celery lifter is the thing. Lacking this we have found our old fashioned potato digger very serviceable after removing the rattler and screen. The broad blade "roots" under the row, dislodging the heavy plants in fine shape. By hitching to one of the end holes, rather than the center hole in the clevis, the digger may be run at an angle so that the plants rarely bunch up or clog under the beam.

Best to Bury Turnips in Soil or Sand

What is the best way to store and keep field turnips for table use? We have several hundred bushels and after New Year's usually they are in good demand. We are making out of a heavy wall sizable an apple storage room. Would it be advisable to store apples and turnips in the same room if put up in separate barrels?—J. C., Berks County, Pa.

I am afraid turnips stored in your apple room will shrink and shrivel more or less if contained in barrels. This likely could be avoided by placing the turnips on the floor two feet deep and covering with moist soil or sand.

I believe it would be preferable to bury them in an outdoor pit as sketched and described in the October 29, 1927, issue of Pennsylvania Farmer.—G. S. W.

Rambles of a Pennsylvania Fruit Grower

By S. W. FLETCHER

XXVI Rogue River Valley Pears

THE Rogue River Valley of Oregon, once famous for its apples, is fast fading from the apple picture, but is coming in strong on pears. During the past four years the apple area has been reduced over a thousand acres. There are now in the valley about 7000 acres of pears and 3000 acres of apples. The apple acreage will continue to decline since the apple requires more care here than the pear, is less certain in cropping, and does not pay as well. Only apple orchards producing at least five hundred packed boxes an acre have shown any profit in recent years, and these are comparatively few. The Spitzenberg is going out rapidly with blight and canker, leaving the Yellow Newtown the dominant commercial sort. This is largely exported to England.

I admire the courage of these western fruit growers who can callously pull out a twenty-year-old apple orchard and set the land in pears. Many eastern growers would not do this, even tho convinced that pears would pay better than apples. The same disastrous conservatism leads them to keep trees of varieties that have been outclassed by better sorts and are no longer profitable.

The winters in the Rogue River Valley are short and mild. The summers are cool at night. Please note that this statement reads "cool at night." The valley is rather limited in extent, and fully seventy-five per cent of the best pear land already has been planted.

The preferred pear soil is a black adobe, but the loams give fair results. The rainfall is around fifteen inches. Practically none of it comes between May and October. Irrigation has not been resorted to until the last few years. Water is turned on once or twice a year, usually in early spring, and again when the fruit is three quarters grown. The tendency is to irrigate too much and cultivate too little, so that the fruit has size, but not firmness, and the tree is more subject to blight.

Most of the orchards are tilled with cover crops of smooth vetch or melilotus, but some are in sod. Sulphate of ammonia is preferred to nitrate of soda and is applied in February at the rate of two hundred to three hundred pounds an acre. Many pear trees one to five years old have spreaders, which are sticks placed in the crotches to spread the limbs. I saw a number of young orchards in which the lower limbs were tied down to stakes, to promote earlier bearing, due to construction of the wood.

The outstanding cultural problems of the Rogue River pear grower are fire blight control, frost prevention and arsenical spray residue. They do not claim here, as in some California districts (the Pajaro Valley, for example) that there is no blight whatever in the valley. There have been years when blight has taken from ten to forty per cent of some orchards. Very few, if any, of the old orchards have a one-hundred-per-cent stand, as is quite common in the Santa Clara Valley. Blight control is well organized, thru community cooperation, and the mortality is much less than formerly. County blight inspectors work with the growers; the hold-over cankers are systematically cut out, and neglected orchards are condemned. Spraying the blossoms with Bordeaux when in the pink acts as a deterrent for blight-carrying insects. I saw some remarkable examples of collar-blighted trees which were saved by bridge grafting; in some cases the clons were over three feet long.

There is also the question of blight resistant stocks. I visited the Rogue River Experiment Station, where F. C. Raimer has been working on this problem for sixteen years. He secured different species of pears from all over the world. Two of the Oriental species, Pyrus ussuriensis and Pyrus calleryana, are almost immune to blight and have been used as root stocks commercially to a considerable extent. The former, however, does not make as long-lived

Sticks used to spread limbs of a young pear tree

and productive a tree as those that are grafted on French roots, and many growers, especially in California, have lost heavily by using it as a stock.

Professor Raimer now pins his faith on resistant types of Pyrus comfunia that he is developing. This species is the common European pear, of which Bartlett is a variety. Most of these resistant types are seedlings of the Old Home, a blight-resistant but otherwise worthless variety found in Indiana. Open-pollinated seedlings of this variety are apparently very blight resistant, while French seedlings in an adjacent row show all degrees of susceptibility. The Tyson and the Seckel, two varieties of Pennsylvania origin, are quite resistant to blight and are used in his crosses.

Pear Growers Hire Bees

All the thousands of seedlings which he is growing are hand inoculated with virulent blight bacteria; only the immune can survive. His present recommendation, which most of the growers are following, is to set trees having a root of Pyrus calleryana, a trunk of Old Home, and to topwork these to the desired variety when four or five years old. Evidently Rogue River pear growers are not afraid of the honey bee as a blight carrier, for they hire them during the blossoming season.

The frost hazard is great, largely because most of the orchards lie near the floor of the valley. Ninety per cent of the orchards are equipped with oil reservoirs and with heaters. Heating is necessary almost every year. The pots were used seven nights in 1927 and thirteen in 1926. The cost is twenty-five to thirty dollars an acre annually.

Rogue River pears are sprayed four or five times a season. Spraying is mainly to control codling moth, of which there are overlapping broods. There is no scab and little aphis; no nicotine is used. The standard schedule is a dormant spray with lime-sulphur or oil, Bordeaux in the pink, a calyx spray with arsenate of lead alone, and one or two cover sprays with the same material. The trees are banded and the pupating moths collected. There is no dusting in the valley.

The several applications with lead arsenate in a rainless summer, especially when it is necessary to apply a spray just before harvesting, make a spray residue problem that is driving the growers distracted. Rogue River has an early shipping season and bore the brunt of the condemnation proceedings last year. The valley shipped 2200 cars of pears in 1926, including those that were canned. At least seventy-five per cent of the winter varieties—Anjou, Bosc, Comice and Winter Nelis—are exported, mainly to England. The hue and cry in that country about arsenical poisoning, tho it has little foundation in fact, must be heeded, for the seller must strive to please the buyer.

Spray Residue Causes Loss

Last year the loss by condemnation was very heavy. Growers paid ten cents a box for wiping, only to have the pears condemned at destination. In some cases it cost a dollar a box to recondition this fruit so that it could be sold. There were many red ink returns.

Rogue River pear growers have abandoned wiping machines as unsatisfactory and have turned to washing. Immersing the fruit for ten minutes in a one per cent solution of hydrochloric acid (3 gallons of the 32 per cent commercial acid to 100 gallons of water) is recommended. Machines are now being developed for speeding up the process by spraying the chemical upon the fruit. I saw an uncompleted model of a machine in which the fruit is carried by water which circulates by gravity, instead of by belt or chain. The water contains formaldehyde to prevent storage rots and molds. The fruit is lifted on rollers to a chamber where it is sprayed from all sides, under high pressure, with the acid bath. From there it passes into another chamber where an air blast blows off the moisture, so that it is supposed to come out dry enough to pack. Other manufacturers are making machines that apply the acid in different ways. It is evident, however, that all these machines are in the experimental stage, and it will be impossible to get enough of them into the hands of the packers to handle the crop this year.

Should Specialize on Bosc

About one-half of the pear trees in the valley are Bartlett, and one-third of the crop of this variety goes to the cannery. It is felt that the Bartlett is over planted and that Rogue River cannot compete with California in growing this variety. Other varieties, in order of importance, are Anjou, Bosc, Comice, Howell and Winter Nelis. The Rogue River Bosc is an unusually high quality dessert pear and commands the highest price. There is a feeling that the valley should specialize on this variety.

Very little fruit is packed in the orchard; it is hauled to a central packing house. The standard pear box holds forty-five pounds net. It has paper padding on top and bottom and each pear is paper wrapped. Picking is done mostly with tramp labor from California. Average prices in recent years have been forty to sixty dollars a ton for Bartlett at the cannery; Anjous bring $3.50 to $4.50 a box, and Bosc $4.00 to $6.00. Last year all varieties were off price.

Good pear orchards sell for $750 to $1200 an acre, and pay dividends on this valuation. I saw a hundred-acre orchard that has averaged ten per cent on a $1000 valuation for the past ten years. A certain forty-two-acre orchard has netted over $10,000 a year for the last five years. These, of course, are exceptional results. The cost of production, according to recent surveys, averages about seventy-five cents a box and the cost of packing last year, including box, paper and ten cents for wiping, was sixty-five cents. The average production is low, less than two hundred bushels an acre, but

(Continued on page 29)

TOP NOTCH

The muscles give it strength

IN men and boots it's muscular strength—not heaviness—that counts. Only in Top Notch Buddy Boots will you find the "muscles" of tough, live rubber that give *extra wear without adding extra weight.*

These ribs or muscles strengthen the sides of the boot and prevent cracking. They are a patented, exclusive Top Notch feature—that's why no other boot will give you such long wear as the Top Notch Buddy.

Soles and heels are extra thick. The trim-shaped leg prevents the foot from slipping up and down. In every respect you will find it a boot of wonderful durability and comfort.

Ask for Top Notch Rubber Footwear by name—boots, arctics, heavy and light rubbers, for men, women and children.

Roup Epidemic Killing Poultry

Birds sneeze, wheeze and choke. Throat rattles. Nose runs. Spreads rapidly. Act at once!

Readers who find colds or roup starting in their flocks will be interested in a letter written by Thomas Pulliam, Shiveley, Ky. He says:

"I have had birds with their eyes closed and every form of roup, and saved every one of them. Last winter I had a Barred Rock cockerel that was nearly dead. He had dropped from 7½ to 2½ pounds. I gave him Roup-Over and it worked like magic. In two weeks, he was back on the firing line and fighting every rooster on the place. I can't understand why people let their birds die with roup, when Roup-Over will save them."

It is amazing how quickly and easily colds and roup can be ended by this method. If the trouble is already started, a few drops of Roup-Over, applied in the nostrils, will usually banish every symptom in one day. Better still, a few drops used in the drinking water guards the whole flock against roup, colds, and other epidemics. A liberal supply of Roup-Over can be obtained by sending fifty cents (or $1 for large size holding 3 times as much) to **The Burrell-Dugger Co., 544 Postal Station Bldg., Indianapolis, Ind.** As Roup-Over is guaranteed to do the work or money refunded, it costs nothing to try. Readers will find it entirely different and much quicker in action than anything else ever tried for roup and similar infections.

Roup Over
Stops Roup-Colds-Canker

Look out for ROUP!

WATCH your fowls for signs of roup—sneezing, swollen eyes, watery discharges, cheesy formations in nostrils.

At first signs, crush and dissolve Dr. Hess Roup Tablets in the drinking water. That will immediately remove the sources of infection, and your flock will begin to doctor themselves.

In chronic and advanced stages, bathe the head and swab out the mouth and throat with a stronger solution.

They stay in solution. **Only one thorough stirring is necessary. Your birds get the same medicine whether it be the first or last drop. That's important.**

R. L. SCHARRING-HAUSEN
Editor
Glenview Farm

Wants Formula for Laying Mash

I have lots of sound old corn, old wheat and oats. Can get meat meal at $4 a hundred. Can you give me a formula for a laying mash using the above grain? Do you consider whole oats a safe feed for chickens? I lost several young half-grown chickens this summer while I was feeding oats freely. I quit the oats and lost no more.—R. M., Lycoming County, Pa.

Rations designed at the N. J. Experiment Station to use as much home-grown feed as possible are as follows:

Mash: 100 bran, 100 middlings, 100 ground oats, 100 corn meal, 100 meat scrap. For Leghorns, double the meal. Grain: 100 wheat, 200 cracked corn.

Whole or ground oats are somewhat in disfavor for chicken feed on account of the fiber they contain, especially where the grains are light. The sharp particles irritate the intestines causing a condition known as enteritis, which may be fatal. For this reason ground rolled oats or oats groats are preferred, altho home-grown oats of good quality may be fed to grown birds.—R. L. S.-H.

Turkeys Have Roup

Could you kindly tell me what ails my turkeys? I had good luck with them but about a month ago I noticed five of the young ones had badly swollen faces. Their eyes seem to water at first and afterward pus forms. They sniff as if they might have the gapes or a cold. Do you think the chickens might take the disease, too? They roost near the chicken house and are together a lot. —Mrs. D. H. R., Schuylkill County, Pa.

It is evident from your description of the ailing turkeys that they have the roup. Birds that roost in trees and are exposed to the cold fall rains are susceptible to this disease, which is contagious and very common in chickens as well. Unfortunately there is no certain cure for roup. Sick birds should be kept by themselves, and if you can put them in a colony house with a brooder stove to take the chill and dampness out of the air that is a scheme that often helps with common fowls. Be sure to feed well on a laxative diet, and if you can add cod liver oil to the mash at the rate of a pint to 100 pounds I am sure it will prove beneficial. If there is any cheesy matter in the eyes or nostrils, remove it gently with a quill and paint with 15 per cent argyrol.—R. L. S.-H.

Hens Become Weak and Fall Over

I have lost a number of hens from my flock. Their feathers become dull, their combs turn a bluish color, and toward the last the hens just stand around and become so weak that they fall over. I have noticed that they show a great thirst.—Mrs. N. M., Chester County, Pa.

If you will open up one of the sick hens I am sure that you will be able to find what is the trouble. In tuberculosis you will discover yellowish lumps in the lungs, liver, intestines or other organs and sometimes in the flesh. If worms are the cause, by slitting the intestines and examining the contents they are easily seen. The remedy for these worms is to add two pounds of tobacco powder to each 100 pounds of mash, and feed this mixture for several weeks at a time. However, I am inclined to think that T. B. is the trouble. This disease is hard to discover in its initial stages and impossible to cure. It is contagious, and all sick birds should be removed from the flock and disposed of. This disease is especially prevalent in the older birds and one good method of control under ordinary circumstances is to sell off the hens after they have completed the second laying season. Younger birds are more profitable, anyway. After you have removed all suspicious birds, give the house a thoro cleaning and spray with some good disinfectant.—R. L. S.-H.

Nest Box Notes

WHENEVER anyone sees my mash hoppers with the hens right in them filling up, they invariably ask if the hens don't dirty the feed. The answer is that they do not. There is not nearly the danger of contamination that there is from picking up grain off the floor, as the litter is sure to be full of filth. Worrying about the chickens in the hopper and not about what may be in the litter is like the old idea of straining at a gnat and swallowing a camel.

• • •

Some poultrymen are now feeding grain in hoppers and others are using an all-mash ration, simply to avoid feeding grain in dirty litter.

• • •

On some poultry farms where no crops are raised to provide litter, the owners are using prepared peat moss with the idea of leaving the litter in all winter. While peat moss has great absorptive powers, it seems to me that it would become pretty filthy after a winter's use. I wouldn't want to feed grain in it.

• • •

We use straw or waste hay and clean out the litter at frequent intervals. This not only helps from the standpoint of sanitation but furnishes valuable manure for the crops. The birds always seem to eat with better appetites when the litter is clean.

• • •

It used to be recommended that grain be fed in deep litter in order to induce the birds to exercise in scratching for it. While exercise is a good thing, on the other hand the great problem with Leghorns is to keep them up to body weight while laying. They are nervous and active by nature, and get enough exercise without being forced to scratch their grain out of deep litter. Especially at night the idea is to have the birds go to roost with full crops, and I believe that for Leghorns the night feeding at least may well be given in a trough.

• • •

A V-shaped shallow trough to set on the floor will be found the most practical for the purpose. Two six-foot troughs will give room for 100 hens. They are also useful for feeding green feed or moist mash altho I prefer to spread the latter on the dry mash in the mash hoppers. When the troughs are not in use they should be turned over to keep them clean.

• • •

We've been having some mighty fine weather this fall, but it is due to turn off cold any time. On chilly nights the curtains ought to be closed on the same principle that we hunt up an extra blanket; but at the same time ample provision must be made for ventilation.

• • •

While our hens get cabbage for green stuff as long as it lasts, I think they relish a change once in a while. We keep a load of old fashioned "punkins" and use them to vary the diet. The birds seem to like them, seeds and all.

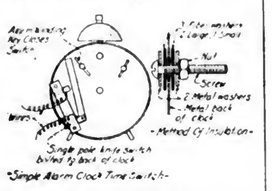
• • •

Too much green feed is as bad as none at all, as it will displace more nourishing material and make the birds thin. From three to five pounds per 100 birds daily is about right.

This Makes the Hens Work Overtime

Here is an alarm-clock time switch for poultry house lights which is simple and reliable. You will note that an ordinary single throw time switch is fastened to the back of the clock with two small bolts, such as stove bolts or those from ordinary dry cells. These bolts must not touch the metal of the clock. A short extension may have to be soldered to the alarm key to move switch arm for contact.

If these small bolts are put thru holes in the insulating base of the switch and do not touch the metal contact posts at either end or the screws which hold them to the insulating base, it should not be necessary to insulate the bolts from the metal back of the clock. Still it is easily done and will add another element of safety and might help to prevent a bad short circuit. To insulate the bolts, make the holes in the metal back enough larger than the bolts



Arm moves to close switch

Not Screw
2 Metal washers
Metal back of clock
Method of insulation
Single Alarm Clock Time Switch

that there will be an eighth of an inch clearance all around the bolt. Then put on the bolt first a metal washer larger than the hole, then a fiber or pasteboard washer larger than the hole, then a fiber or pasteboard washer which will fit inside the hole, then another fiber washer or two larger than the hole, then a metal washer and nut to hold the bolt solid, then the switch, with the washer and nut to hold it solid.—J. W. Dickerson.

These Flocks Led in Pennsylvania

TWO hundred and twenty-six White Leghorn hens owned by C. R. Garland, Oakdale, led poultry demonstration farms of the state in September by producing 20.7 eggs each.

Flocks of 100 or more pullets were led by 205 White Leghorns owned by John Toivonen, Girard. They averaged 20.1 eggs each. The best record in the 100 hen and pullet division was that of 18.5 eggs each made by 114 White Leghorns owned by Mrs. I. V. Otto, Carlisle.

Make Stomach Studies

INSPECTION of the contents of the stomachs of as many hawks as possible has been undertaken by the Pennsylvania State Game Commission with a view to obtaining information on habits and diet as was done a few years ago in the case of crows. This is in addition to the study of the starling undertaken recently.

AN INEXPENSIVE, nonburnable, nonexplosive fumigant which is not injurious to fabrics and to metals and which is not dangerous to human life, has been announced by the United States Department of Agriculture. The cost should be about one dollar a gallon and the fumigant is about five times as poisonous to pests as carbon tetrachloride.

PIONEER *for* NEW PROFITS

Right on Your Own Farm

NEW, rich, virgin acres waiting for the plow and harrow, waiting to bring you big, early-maturing harvests,—right on your present farm. Now they're broken up with deep-rooted stumps, big boulders, and ragged gullies, good only for pasturage.

Pioneer on these new acres just as your father and grandfather pioneered. Break new ground, gain new riches. They mean more of the necessities of life and more of its luxuries for your family. These acres of virgin soil hold the key of new success, brighter, happier, less worrisome days.

You have a tool your fathers didn't have—agricultural explosives. One stick of dynamite does in a few moments what would be a day's work for a man and team of horses.

Safe as any tool you use and just as easy once you've learned how to use it. There's a man in your county who knows all about this new kind of pioneering, a man who has helped other farmers to pioneer. He knows all about the use of explosives on the farm. He'll sit down with you and work out the costs and profits in black and white of this kind of pioneering. That man is your county agricultural agent.

He is sent out by the Department of Agriculture of your country and your state, trained and directed by your state agricultural college expressly to take the backache out of farming and bring into it more profit and happiness.

If you haven't met him yet, make it a point to get acquainted. Write to your agricultural college. It takes only a moment and will add years of prosperity and happiness to your life. Write also for the free handbook.

Starts Hens Laying

Here's a New Way to Get Eggs in Winter. Costs Nothing to Try

A letter from Miss Dama Wright, Vernonia, Ore. has a real idea for chicken raisers who are not getting plenty of eggs. She says:

"Late in October, our fifteen hens were not laying at all. I started giving them Don Sung and for ten days they still didn't lay. But on the eleventh day they laid thirteen eggs, and it is wonderful what Don Sung has done for our egg basket."

Don Sung, the Chinese egg laying tablets which Miss Wright used, are opening the eyes of chicken raisers all over America. The tablets can be obtained from the **Burrell-Dugger Co. 134 Postal Station Bldg., Indianapolis, Ind.** Poultry raisers whose hens are not laying well should send 50 cents for a trial package (or $1 for the extra large size, holding three times as much). Don Sung is positively guaranteed to do the work or money promptly refunded, so it costs you nothing to try. Right now is the time to start giving Don Sung to your hens, so you will have a good supply of fresh eggs all winter.

Quaker Dairy Rations *mean* MILK PROFITS

Quaker Dairy Rations insure maximum milk production at minimum cost. Our recommended methods of feeding prescribe this important advice:

"Feed the Feed that Fits Your Farm, Your Herd"

Which of these feeds is the one for you?

Quaker Boss Dairy Ration is the ideal **24%** grain ration for cows receiving timothy hay, grass hays, straws, corn stover, or poorer grades of clover.

Quaker Big Q Dairy Ration exactly **20%** meets the need of those herds receiving poor alfalfa hay, fair clover hay, or real choice mixed clover and grass hay.

Quaker Dairy Ration has no superior **16%** when cows are receiving choice clover hay, good alfalfa hay, or an excellent grade of fine mixed grass-and-clover hay; a good ration for dry stock and for young growing stock.

Quaker Sugared Schumacher Feed, as the exclusive grain ration, has a real place when the herd is receiving liberal quantities of the very best grade of alfalfa hay. For blending it combines beautifully with any Quaker high protein feed. For all stock—dry stock, horses, sheep, swine and steers it is unexcelled.

All Quaker Dairy Feeds contain molasses in dried form and are rich in the minerals cows must have to make milk.

Send for the FREE book—"The Dairy Herd," for detailed information. It tells you just how to meet the feed requirements of your farm, your herd.

Brown Swiss Herd Breaks Westmoreland C. T. A. Record

THE Westmoreland County Cow Testing Association finished its third year in the association, September 1, 1927, with 21 whole-year members. In addition there were six members in the association only part of the year. There were 569 cows in the association during all or part of the year.

During the time the association has been in operation there has been a considerable change in membership which accounts for the result being lower than previous years.

However, John S. Wohlwend's Brown Swiss herd has broken all previous records and there is a general increase for the members who have been in the association during the time it has been in operation.

There have also been organized two new associations in the county this year making a total of three associations at present.

The result for the three years is as follows:

Year	Avge. no. cows	Pounds milk	Pounds butterfat
1925....	297.25	8581	326.5
1926....	381.27	8271	310.2
1927....	352.66	8016	301.0

The result for the whole-year members is as follows:

Average number of cows in the association	352.66
Avge. per cow: Lbs. milk	8016
Pounds butterfat	301.0
Percentage of butterfat	3.8
Value of product	$343.89
Cost of pasture	12.51
Cost of roughage	57.29
Cost of grain	54.15
Total cost of feed	123.95
Value of product above feed cost	219.94
Returns for $1.00 expended for feed	2.77
Feed cost per 100 lbs. milk	1.55
Feed cost per lb. butterfat	.41

Following is a grouping of all cows producing over 300 pounds of butterfat. These cows are grouped as follows: Group 1, above 500 lbs. butterfat, 4; group 2, between 400-500 lbs., 30; group 3, between 300-400 lbs., 122. Total number of cows producing over 300 pounds of butterfat, 156.

W. L. Treager, county agent; Norman C. Farlow, cow tester in charge; figures compiled by I. O. Sidelmann.

Thirteen herds with an average of five or more cows exceeded an average production of three hundred pounds of butterfat. A complete list of these herds follows:

Owner	Avge no. cows	Breed	Lbs. milk	Lbs. butterfat
John S. Wohlwend, Salina	8.33	R. Br. Sw.	10,358	410.0
E. G. Summy, Mt. Pleasant	13.17	R. & G. H.	10,587	377.5
J. M. & C. A. Lemon, Saltsburg	13.42	G. H.	9814	370.0
J. H. Silvis & Sons, Greensburg	23.29	R. H., R. J	9366	367.8
John Moffat, New Alexandria	9.75	R. & G. G.	8448	358.3
R. A. Elsaman, Erwin	17.83	R. & G. H., R. & G. G.	9278	350.4
Westm'd Co. Home, Greensburg	21.25	G. H.	9220	334.7
St. Vincent's Archabby, Beatty	18.00	R. & G. H.	9302	324.9
F. M. Kintigh, Irwin	8.08	R. & G.G., P. A.	7753	323.9
H. S. Mathias & Son, Irwin	21.00	R. & G. G., G. J., R. & G. H.	8874	317.9
Michael Rathgeb, Greensburg	36.67	R. & G. J., R. & G. H.	7969	316.7
Carl S. Wertz, Greensburg	9.50	R. G.	6279	315.5
Paul A. Hugus, Latrobe	29.17	R. & G. H., R. & G. J.	7342	303.3

From the Week's News

THE farm egg-laying contest which was opened November 1 by the State College of Agriculture for poultrymen in New Jersey has enrolled more than 800 persons owning a total of nearly 200,000 chickens.

NO MARKED changes in farm ownership for the year ending March 15, 1927, are indicated by the annual summary of the farm real estate situation just published by the Department of Agricultural Economics.

EACH COLONY of bees in Pennsylvania should have at least 45 pounds of honey, or the equivalent of seven full frames. This amount is needed for winter feeding and brood rearing in the spring.

CATNIP OIL is used as a lure for the trapping of mountain lions and bobcats in the western range states. To obtain this oil the catnip plant has been grown on a three-fourths of an acre plot of land on the fur experimental station maintained by the Biological Survey at Saratoga Springs, N. Y. This yielded 40 ounces of refined oil valued at $100 an ounce.

THE INTERNATIONAL Turkey Exposition is to be held in Chicago December 1, 2 and 3rd.

PENNSYLVANIA RANKS as one of the twelve leading agricultural states, according to recent studies based upon 1926 crop and livestock estimates.

WHITE PINE blister rust, a disease which has been playing havoc with white pine in heavily infested areas north of Pennsylvania, is now known to be present thruout this state.

WITH THE CLOSE of the first season's operations of the Hammonton Farmers' Market, growers sold nearly $100,000 worth of blackberries, raspberries, huckleberries and peaches.

ARRANGEMENTS for the annual meeting of the National Dairy Union have been completed and a change is announced, the place of the meeting being moved from Minneapolis to Chicago and the date changed from November 29 to December 1st.

PENNSYLVANIA poultrymen in 31 counties are making ready this fall for the production of high grade, standardized baby chicks next year.

THE SPREAD of the corn borer in Pennsylvania was only about one-fourth as great this year as in 1926.

"THE WHOLE treatment of waterway and flood problems represents only 10 per cent a year of the annual surplus of three hundred to four hundred millions we are contemplating," said Secretary Hoover in talking about the proposed 9000-mile consolidated waterway system traversing twenty state.

If you have barley, oats, or corn, use one of these mixtures to get a *complete, well-balanced* dairy feed

500# Corn, Oats, and Barley mixed and ground in any proportion you may have.
500# AMCO 24% DAIRY

TO MAKE milk, a dairy cow must have protein and minerals, and to produce to her fullest capacity, she must have a variety of feeds that *taste* good to her and that she can digest.

Use your home-grown grains to keep down costs, but use them with a ready mixed supplement that supplies *what they lack*.

Either AMCO 32% SUPPLEMENT DAIRY or AMCO 24% DAIRY, mixed with your own grains in the proportions shown above, will give you a well-balanced ration that will increase the milk check more than enough to pay their cost.

These two feeds are mixed on formulas referred for feeding quality to the nineteen college feeding experts on the College Feed Conference Board*. They are priced at rock bottom by revising the formula (with the Board's approval) when the market makes it to the feeder's interest to do so.

Study the mixtures printed above, consult your own farm-grown grain inventory, and select the Amco feed which will mix best with your own oats, barley, and corn. If you have no home-grown grains, feed AMCO 24% DAIRY or AMCO 20% DAIRY. Your Amco Agent can supply you.

*The College Feed Conference Board is composed of dairy feeding specialists of nineteen state colleges of agriculture. The College Feed Conference Board approves formulas for feed manufacturers, but accepts no responsibility in supervising the mixing or sale of such feeds, nor does it guarantee the composition of feeds so manufactured. This responsibility is completely taken by Amco Feed Mixing Service.

GAME FOR DINNER

When the Hunter Brings in His Bag After a Day's Gunning

THE cook who ranks highest in the opinion of friend husband, brother Jack, or even Dad himself, is the one who can look at the somewhat messy contents of a game bag with the hunter's prideful eye, and proceed to create dishes that will make a veritable feast. Cakes may fall, and jellies refuse to jell, but the woman who can cook a good game dinner is assured unending fame.

One of the first things to remember is that game that has been shot by the average hunter may not be so well bled as fowls purchased in the market, and soaking for two or three hours in salted water or in water to which a little vinegar has been added is a wise precaution.

FRIED RABBIT

After removing skin and dressing carefully, cut in pieces and soak three hours in salted water. Drain, season with salt and pepper, then roll in flour. Put enough bacon, ham or other cooking fat in frying pan (cast iron or aluminum is best) to cover the bottom well and brown the rabbit as you would chicken. Then pour in water to cover meat and cook slowly for three hours, adding hot water as necessary. If the rabbit is an old one a teaspoon of minced onion improves the flavor.

ROAST PARTRIDGE

Fill the cleaned, prepared bird with a mixture made of rolled cracker crumbs, broken crusts of bread, hickory nut meats, chopped tart apple, salt and pepper. Fasten very thin slices of salt pork over the breast with tooth picks, pour in water to cover bottom of pan and roast one hour, adding hot water if necessary. Remove to platter, garnish with parsley and serve with a giblet sauce.

RABBIT EN CASSEROLE

Skin and dress rabbit, cut in rather small pieces and soak thirty minutes in salt and water. Put two tablespoons of fat in frying pan and when hot add the rabbit and brown quickly. Remove meat, season with salt and pepper and pack in casserole. Parboil one cup of diced carrots and add one cup peas, one cup cooked potatoes cut in small pieces, one teaspoon minced onion and two cups browned sauce. Pour this over the meat in casserole and bake one hour or longer if the rabbit was an old one. Remove to hot platter and serve with a border of small silver onions, parboiled and cooked until tender.

SQUIRREL WITH SAUCE

Skin, dress and cut up as many squirrels as are needed, cutting much as you would a chicken for frying. Put one cup hot water, one tablespoon butter, three inner stalks of celery cut in small pieces, one teaspoon minced onion, one sweet apple sliced, a small bit of bay leaf and a seasoning of salt and pepper in covered baking pan. Lay in the squirrels and bake until tender. Remove cover and brown. Serve on hot platter with a sauce made of juices in the baking pan.

QUAIL WITH GOLDEN SAUCE

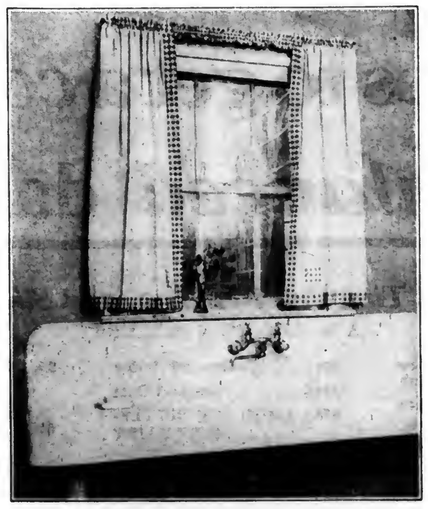
Cut the quail as for frying and cook in as little water as possible until tender. Remove to buttered pan and fry a very delicate brown. Melt two tablespoons butter in another pan, add two tablespoons flour and stir until thoroly blended, add one cup milk and one cup liquor in which the quail was cooked. Cook until smooth, stirring continuously. Stir in a seasoning of salt and pepper, remove from fire, stir in one well-beaten egg yolk and one teaspoon lemon juice. Remove to hot platter, surround with a ring of rice or mashed turnip, pour the sauce over both quail and rice and serve.

WILD DUCK

Pick and draw the duck and wash well in cold water. Dust inside with salt, pepper and powdered sage. Make a dressing of four cups hot mashed potato, two tablespoons chopped onion, two tablespoons butter, one-half teaspoon salt, one-fourth teaspoon pepper, one-half cup sweet cream, the beaten yolks of two eggs, one cup chopped English walnut meats and a seasoning of sage or sweet herbs if desired. Fill the body of the duck with this dressing, dust with salt, pepper and a little flour and bake in covered pan until tender. Remove cover, increase heat and brown.

GAME IN CROUTONS

Any game may be used. Recipe is recommended where hunter's luck was not good. Clean game and cut in pieces not more than an inch and a half in width and two inches in length. Put in pan with three stalks of celery cut in small pieces, one teaspoon minced onion, a seasoning of salt and pepper and water to keep from burning. Bake until tender. Lift meat from pan to dish in which it can be kept hot. Make a white sauce of liquor in pan, remove from fire and add one cup stoned olives cut in half. Make shallow boat-shaped croutons of stale bread and fry in deep fat. Place on individual serving dishes, one on each plate, in bottom of crouton put large spoonful of the sauce and a piece of the cooked game, sprinkle with parsley and serve hot.



Gay Curtains Brighten the Kitchen

IF YOUR ideal kitchen is a bright, cheerful room where you really enjoy working, you will want curtains of some sort at the window, but of a kind that can be kept fresh and clean with little trouble. Needless to say, they must be made of a material that will withstand frequent washing; they must not be too sheer or they will become limp in the steam from cooking, and they must be simple in design.

The curtains in the illustration are a good example of satisfactory kitchen curtains. They are made of unbleached muslin, bordered with bright checked gingham in the same color as the tea towels,—red, as it happens, altho any of the colored checked ginghams would have been attractive, if clear and bright in tone. The tiny ruffle that takes the place of a valance makes it possible to lower the window from the top to let out hot air and cooking odors.

In making up kitchen curtains it is a good plan to run a tuck near the upper casing to allow for shrinkage. In addition to unbleached muslin and gingham, good fabrics to use are English prints and Japanese crepe.—U. S. Bureau of Home Economics.

GIVES VARIETY

Honey, Substituted for Sugar, Adds a Pleasing Flavor

FOR generations honey has been a favorite sweet to use with pancakes, waffles and muffins. Today many people prefer honey as a sweetening for grapefruit, berries, cereals and fruit drinks. Scrapple, sausage and pork chops are given a different flavor when served with it.

In baked foods, honey has an advantage over sugar in that it attracts moisture to itself and keeps the product more moist. This applies to cake, cookies, doughnuts and also bread. Honey may be substituted for sugar in any recipe using equal amounts, but the liquid used must be reduced one-fourth. Honey, like molasses, is slightly acid, so some soda must be used to neutralize it. In any recipe, from one-fourth to one-half teaspoon of soda should be added regardless of the other leavening agents.

If kept at room temperature honey will not granulate as easily as when in a cold place.

HONEY BRAN COOKIES

½ cup sugar
¼ teaspoon cinnamon
¼ teaspoon ginger
½ teaspoon soda
1 teaspoon baking powder
1 cup flour
2 cups bran
½ cup honey
½ cup milk
½ cup melted butter

Mix and sift sugar, flour, baking powder, soda and spices. Add bran, honey, milk and melted butter. Drop from a spoon on buttered baking sheet, bake for 15 minutes in a moderate oven.

Nuts or raisins make these cookies a little more appetizing.

Makes Mush for Market

WILL you please publish a recipe for cooking mush? I want to learn to make it nice and smooth to sell in a city market.—Mrs. H. F., Pa.

I make my corn meal mush as follows:

1 cup corn meal
2 cups milk
2 cups boiling water
1 teaspoon salt

Blend the corn meal with the cold milk, having it very smooth. Then stir the smooth mixture into the boiling salted water. Stir it over direct fire until the mixture thickens, and continue cooking for one hour in a double boiler. Pour into molds at once. This makes a smooth, firm, shiny product. Water may be used instead of milk. Use of milk adds food value and flavor.—G. S. S.

Hint for Radio Fans

MY HUSBAND has arranged that we charge our radio battery at the same time I am washing. He merely rigged up an attachment to our 1½ horse-power gas engine, and it does the trick. I am sure there are many men in our Pennsylvania Farmer family who could do the same.

I enjoy the Home Pages more and more each week, and wish continued success to the household department. —Mrs. Ray Tripp, Pa

You can tell 'em for *me*

P. A. PUTS into the bowl of a pipe exactly what I expect to take out through the stem—Satisfaction, with what the printers call a cap S. When I first went in for a pipe, I said: "Give me a tobacco that won't bite the tongue or parch the throat—something mild."

The man shoved a bright-red tin across the counter, and said: "Here's Prince Albert." Smart fellow! He knew his stuff. I opened the tin and got a real thrill out of the aroma itself. Some fragrance, Fellows. If the taste was *half* as good, I said, P. A. was *my* brand for life.

Half as good? Huh! It was marvelous! Cool as the boss when you ask for a raise. Sweet as an extra five in next week's envelope. Mild and mellow and long-burning, with that rich, full-flavored tobacco body you want in a smoke. There's nothing like Prince Albert, Boys.

You never get fed-up on P. A., no matter how hard you hit it up. Morning to midnight. Slow or fast. Just fill your pipe and hop *to* it. If you think I'm over-enthusiastic, there's one sure way to tell. Make the personal test!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

GAME FOR DINNER

When the Hunter Brings in His Bag After a Day's Gunning

THE cook who ranks highest in the opinion of friend husband, brother Jack, or even Dad himself, is the one who can look at the somewhat messy contents of a game bag with the hunter's prideful eye, and proceed to create dishes that will make a veritable feast. Cakes may fall, and jellies refuse to jell, but the woman who can cook a good game dinner is assured unending fame.

One of the first things to remember is that game that has been shot by the average hunter may not be so well bled as fowls purchased in the market, and soaking for two or three hours in salted water or in water to which a little vinegar has been added is a wise precaution.

FRIED RABBIT

After removing skin and dressing carefully, cut in pieces and soak three hours in salted water. Drain, season with salt and pepper, then roll in flour. Put enough bacon, ham or other cooking fat in frying pan (cast iron or aluminum is best) to cover the bottom well and brown the rabbit as you would chicken. Then pour in water to cover meat and cook slowly for three hours, adding hot water as necessary. If the rabbit is an old one a teaspoon of minced onion improves the flavor.

ROAST PARTRIDGE

Fill the cleaned, prepared bird with a mixture made of rolled cracker crumbs, broken crusts of bread, hickory nut meats, chopped tart apple, salt and pepper. Fasten very thin slices of salt pork over the breast with tooth picks, pour in water to cover bottom of pan and roast one hour, adding hot water if necessary. Remove to platter, garnish with parsley and serve with a giblet sauce.

RABBIT EN CASSEROLE

Skin and dress rabbit, cut in rather small pieces and soak thirty minutes in salt and water. Put two tablespoons of fat in frying pan and when hot add the rabbit and brown quickly. Remove meat, season with salt and pepper and pack in casserole. Parboil one cup of diced carrots and add one cup peas, one cup cooked potatoes cut in small pieces, one teaspoon minced onion and two cups browned sauce. Pour this over the meat in casserole and bake one hour or longer if the rabbit was an old one. Remove to hot platter and serve with a border of small silver onions, parboiled and cooked until tender.

SQUIRREL WITH SAUCE

Skin, dress and cut up as many squirrels as are needed, cutting much as you would a chicken for frying. Put one cup hot water, one tablespoon butter, three inner stalks of celery cut in small pieces, one teaspoon minced onion, one sweet apple sliced, a small bit of bay leaf and a seasoning of salt and pepper in covered baking pan. Lay in the squirrels and bake until tender. Remove cover and brown. Serve on hot platter with a sauce made of juices in the baking pan.

QUAIL WITH GOLDEN SAUCE

Cut the quail as for frying and cook in as little water as possible until tender. Remove to buttered pan and fry a very delicate brown. Melt two tablespoons butter in another pan, add two tablespoons flour and stir until thoroly blended, add one cup milk and one cup liquor in which the quail was cooked. Cook until smooth, stirring continuously. Stir in a seasoning of salt and pepper, remove from fire, stir in one well-beaten egg yolk and one teaspoon lemon juice. Remove to hot platter, surround with a ring of rice or mashed turnip, pour the sauce over both quail and rice and serve.

WILD DUCK

Pick and draw the duck and wash well in cold water. Dust inside with salt, pepper and powdered sage. Make a dressing of four cups hot mashed potato, two tablespoons chopped onion, two tablespoons butter, one-half teaspoon salt, one-fourth teaspoon pepper, one-half cup sweet cream, the beaten yolks of two eggs, one cup chopped English walnut meats and a seasoning of sage or sweet herbs if desired. Fill the body of the duck with this dressing, dust with salt, pepper and a little flour and bake in covered pan until tender. Remove cover, increase heat and brown.

GAME IN CROUTONS

Any game may be used. Recipe is recommended where hunter's luck was not good. Clean game and cut in pieces not more than an inch and a half in width and two inches in length. Put in pan with three stalks of celery cut in small pieces, one teaspoon minced onion, a seasoning of salt and pepper and water to keep from burning. Bake until tender. Lift meat from pan to dish in which it can be kept hot. Make a white sauce of liquor in pan, remove from fire and add one cup stoned olives cut in half. Make shallow boat-shaped croutons of stale bread and fry in deep fat. Place on individual serving dishes, one on each plate, in bottom of crouton put large spoonful of the sauce and a piece of the cooked game, sprinkle with parsley and serve hot.

Gay Curtains Brighten the Kitchen

IF YOUR ideal kitchen is a bright, cheerful room where you really enjoy working, you will want curtains of some sort at the window, but of a kind that can be kept fresh and clean with little trouble. Needless to say, they must be made of a material that will withstand frequent washing; they must not be too sheer or they will become limp in the steam from cooking, and they must be simple in design.

The curtains in the illustration are a good example of satisfactory kitchen curtains. They are made of unbleached muslin, bordered with bright checked gingham in the same color as the tea towels,—red, as it happens, altho any of the colored checked ginghams would have been attractive, if clear and bright in tone. The tiny ruffle that takes the place of a valance makes it possible to lower the window from the top to let out hot air and cooking odors.

In making up kitchen curtains it is a good plan to run a tuck near the upper casing to allow for shrinkage. In addition to unbleached muslin and gingham, good fabrics to use are English prints and Japanese crepe.—U. S. Bureau of Home Economics.

GIVES VARIETY

Honey, Substituted for Sugar, Adds a Pleasing Flavor

FOR generations honey has been a favorite sweet to use with pancakes, waffles and muffins. Today many people prefer honey as a sweetening for grapefruit, berries, cereals and fruit drinks. Scrapple, sausage and pork chops are given a different flavor when served with it.

In baked foods, honey has an advantage over sugar in that it attracts moisture to itself and keeps the product more moist. This applies to cake, cookies, doughnuts and also bread. Honey may be substituted for sugar in any recipe using equal amounts, but the liquid used must be reduced one-fourth. Honey, like molasses, is slightly acid, so some soda must be used to neutralize it. In any recipe, from one-fourth to one-half teaspoon of soda should be added regardless of the other leavening agents.

If kept at room temperature honey will not granulate as easily as when in a cold place.

HONEY BRAN COOKIES

½ cup sugar
¼ teaspoon cinnamon
¼ teaspoon ginger
½ teaspoon soda
1 teaspoon baking powder
1 cup flour
3 cups bran
½ cup honey
½ cup milk
½ cup melted butter

Mix and sift sugar, flour, baking powder, soda and spices. Add bran, honey, milk and melted butter. Drop from a spoon on buttered baking sheet, bake for 15 minutes in a moderate oven.

Nuts or raisins make these cookies a little more appetizing.

Makes Mush for Market

WILL you please publish a recipe for cooking mush? I want to learn to make it nice and smooth to sell in a city market.—Mrs. H. F., Pa.

I make my corn meal mush as follows:

1 cup corn meal
2 cups milk
2 cups boiling water
1 teaspoon salt

Blend the corn meal with the cold milk, having it very smooth. Then stir the smooth mixture into the boiling salted water. Stir it over direct fire until the mixture thickens, and continue cooking for one hour in a double boiler. Pour into molds at once. This makes a smooth, firm, shiny product. Water may be used instead of milk. Use of milk adds food value and flavor.—G. S. S.

Hint for Radio Fans

MY HUSBAND has arranged that we charge our radio battery at the same time I am washing. He merely rigged up an attachment to our 1½ horse-power gas engine, and it does the trick. I am sure there are many men in our Pennsylvania Farmer family who could do the same.

I enjoy the Hame Pages more and more each week, and wish continued success to the household department. —Mrs. Ray Tripp, Pa.

You can tell 'em for *me*

P. A. PUTS into the bowl of a pipe exactly what I expect to take out through the stem—Satisfaction, with what the printers call a cap S. When I first went in for a pipe, I said: "Give me a tobacco that won't bite the tongue or parch the throat—something mild."

The man shoved a bright-red tin across the counter, and said: "Here's Prince Albert." Smart fellow! He knew his stuff. I opened the tin and got a real thrill out of the aroma itself. Some fragrance, Fellows. If the taste was *half* as good, I said, P. A. was *my* brand for life.

Half as good? Huh! It was marvelous! Cool as the boss when you ask for a raise. Sweet as an extra five in next week's envelope. Mild and mellow and long-burning, with that rich, full-flavored tobacco body you want in a smoke. There's nothing like Prince Albert, Boys.

You never get fed-up on P. A., no matter how hard you hit it up. Morning to midnight. Slow or fast. Just fill your pipe and hop *to* it. If you think I'm over-enthusiastic, there's one sure way to tell. Make the personal test!

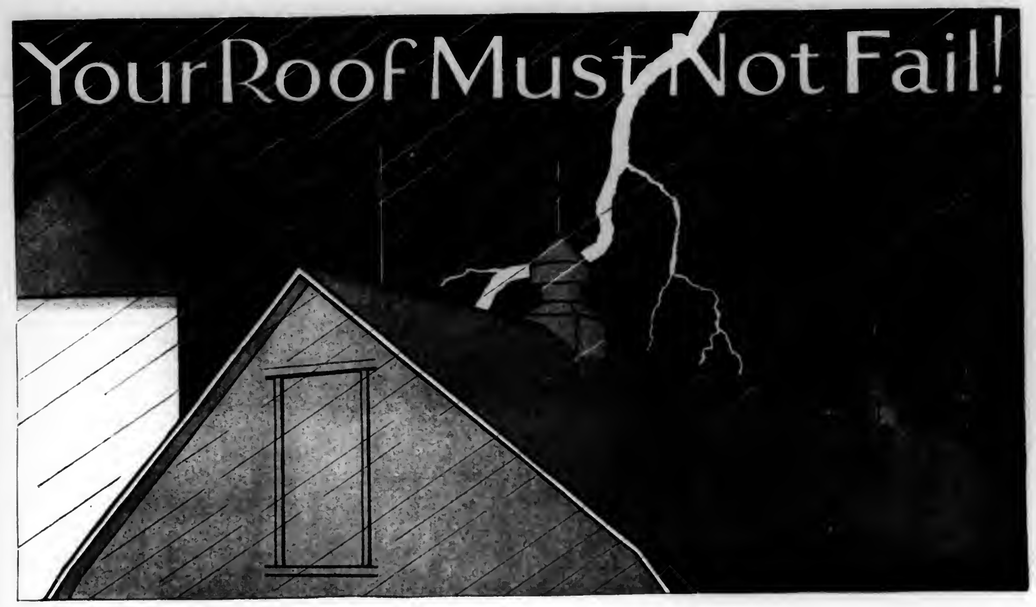
P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

© 1927, R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

INTENTIONAL SECOND EXPOSURE



THE roof over your head stands between your loved ones and the elements. It protects your property, household goods, hay, grain, livestock. It works every hour of the day and night, every day in the year.

Gales of midwinter, laden with sleet, hurl their burly strength against your roof when the thermometer is below zero, grasping at it with icy fingers. Midsummer heat beats down upon it when men and animals seek the relief of shade. Rains pour down in floods, and always, the roof must stand the stress. You depend on it. *It must not fail.*

How much thought do you give to selecting the material that must meet this warfare with the elements? What assurance that when the job is finished, it will remain steadfast against water and wind, heat and cold, hailstorm and gale?

You can tell something about roofing by looking at it, handling it, but to a large extent you must buy it on faith. You must take the manufacturer's word. And fortunately there are manufacturers who know the farm problem. They have studied roofs under all sorts of conditions for many years. They have experimented with every kind of material. Modern machinery and efficient methods keep costs down and make prices reasonable.

That's the kind of roofing made by manufacturers who advertise in this paper. By years of square dealing they have built up the reputations men are proud of. Their laboratories jealously protect that reputation, and their inspectors see that no inferior material goes into the product.

The finished product is honestly made to give service, and on goes the Trade Mark, the personal signature of the manufacturer. It's a product he's proud of. When he drives by your place he will point to it after years of use and say, "That's one of my roofs."

And when you see that manufacturer's advertising in this paper, you know the maker backs it with his reputation. On top of that this publication adds its endorsement, saying, "This is a good and worthy product. You can buy it and be well satisfied."

These wonderful Radiolas faithfully reproduce the fine programs from the great broadcasting stations

FOR perfect reception of broadcasting programs in the country, away from congested city areas, two models of the RADIOLA are ideally adapted.

Everyone knows the famous RADIOLA 20, which established itself as "the greatest value in radio." Many thousands of these receivers are now in use throughout the country. Their amazing sensitivity and selectivity have given them a deservedly high reputation, and particularly in farm homes.

And now RCA, in cooperation with the Westinghouse and General Electric laboratories, offers another remarkable value in a highly efficient receiver—the new storage battery set, RADIOLA 16.

RADIOLA 16—Storage battery receiver of great compactness. For selectivity, sensitivity and tone quality, it sets a new standard for receivers in its price class. The cabinet is finished in mahogany.
Less accessories $69.50
With Radiotrons $82.75

RADIOLA 20—Dry-battery-operated receiver, with amazing sensitivity and many times as selective as the average antenna set. Ideal for distant reception. Can readily be adapted to socket operation. Ideal to use with the new RCA Loudspeaker 100-A.
Less accessories $78.00
With Radiotrons $89.50

It has the widest musical range ever achieved with one-dial control.

When used with the new RCA Loudspeaker 100-A, either of these genuine RADIOLAS will bring into your home the fine programs from the great broadcasting stations. And if you have electric power service, either of these sets can be adapted for alternating current operation by the addition of socket power devices.

The new complete line of RADIOLAS includes sets ranging in price from $69.50 to $895. Any RCA Authorized Dealer will gladly demonstrate these wonderful instruments for you. A RADIOLA installed in your home today will pay for itself many times over.

...the Child to Find Himself

...s "Lost Feeling" Can Be Avoided

ALL of us at some time have been grieved by the distress of a little child temporarily separated from its parents,—lost in a crowd,—and as we joined in a frantic search for the missing one we have wished that there were some way by which such unhappy experiences could be avoided.

When our own boy was very little, in fact as soon as he could walk and talk, we taught him the number of our automobile. Then whenever we left the car we cautioned him to notice where we parked it and told him if in any way he lost us in a crowd he was to run straight to the car and he would find us waiting there for him.

Knowing the number, if unable to retrace his steps because of streets traversed, he could enlist the help of a policeman and a few minutes at most would bring him back.

Sometimes in cities or where the car is too far away to serve as a meeting place we fix upon some building, some easily recognized street corner, in front of a certain play house or municipal building. Then the child can easily inquire his way there, and he knows that there is no reason for fear, as we will meet him as soon as we can reach the prearranged destination.

Applies to Older People, Too

The same plan has its advantages even when older people are considered. The most helpless creature I can imagine is the man who tries to locate his wife in the midst of a Saturday afternoon crowd of shoppers. By arranging to meet at the car, or in front of some designated building much valuable time is saved.

Only one suggestion, to those who use an automobile as a place of rendezvous,—be sure you know your own car.

One evening, loaded with parcels after a shopping trip, I rushed back to the street where we had parked, opened a car door, deposited my bundles on the seat beside me, and annoyed by the persistent watching of a man who stood on the sidewalk a short distance away, decided that I would start up and drive around the square, returning by the time members of my own party arrived.

As I pushed the starter the man stepped hastily forward, and asked: "What are you going to do?"

"Back my car out," I said, struggling between indignation and fear.

"But that's my car," he replied, and glancing down at the speedometer, I missed the familiar mileage.

He was right; my car, of the same make, year and color, was parked behind others, about forty feet away, and crimson with embarrassment I was obliged to gather up my bundles and depart.

I hope I apologized, but I've always been afraid I simply gasped, "It is," when he informed me of my mistake.—Lalia M. Thornton, N. Y.

Timely Tips

FOR the sick child who must remain in bed, a bed table is ideal for meal time as well as play time. An attractive one can be made from a sturdy box by removing the short sides and leaving the ends for legs. Don't neglect painting it in attractive colors.—Mrs. C. C. G.

• • •

A clean chimney will give more heat to each ton of coal.

• • •

The best complexions are waterproof, and are applied from the inside with good food and health habits.

• • •

Rub wagon grease stains with lard; wash them with soap and water, and they will come out with little trouble.

• • •

Children learn by doing, and variety in their jobs makes their tasks more interesting for them and increases their willingness.

• • •

Shelves suspended from the ceiling in the center of the cellar or in the store room will keep rats and mice away from food supplies.

• • •

If you are planning to buy an electric washing machine or electric vacuum cleaner, Cornell has a bulletin that will help you. The bulletins will not tell you what makes are best, but they will help you to decide for yourself. Ask for E-102 if you are interested in washers and for E-103 if it is vacuum cleaners. Send a postcard to the State College at Ithaca, N. Y.

• • •

A dose of castor oil is good for leather-covered furniture for it keeps the leather from drying and cracking. It should be applied with a cloth and rubbed well so that none of it remains on the surface.

Games Which Will Enliven the Birthday or Thanksgiving Party

Plate Spinning

A plate-spinning game is much enjoyed by younger children. The leader is given a plate and stands in the center of the room, the players having been divided into two companies of equal numbers. The leader spins the plate, the inside having been named as the property of the group on the right and the outside belonging to those on the left. When the plate is spun it will sometimes fall with the top up and sometimes with the bottom. If outside up, the players on the left must all laugh, but if inside up those on the right laugh. Any player who laughs with those on the wrong side must become leader.

• • •

Scout Game

The players are divided into two equal groups and each selects one of their players as a Scout. The Scouts then pass into an adjoining room and select some object, it may be a bowl, a pair of eyeglasses, a chair—anything puzzling. After the selection is made the Scouts return and answer any questions asked, that can be answered by "Yes" or "No" or "I don't know." The players can ask if it is an animal, if it is a person, if it is hard, if it is round, if it is made in America, if it is blue, etc., but cannot ask what shape it is, what color it is, or similar questions. Each side alternates in asking questions of its scout and the side first guessing the object wins.

• • •

Cat and Mouse

All players save two join hands, forming a circle. The first player is placed inside the circle and becomes the Mouse, the second remains outside and is the Cat. The players try to hold the ring firm, but when the Cat succeeds in breaking thru loosely clasped hands somewhere in the circle, the players allow the Mouse to rush out and keep the Cat in. When the Cat finally succeeds in touching the Mouse the two players thru whose hands he last succeeded in breaking become Cat and Mouse and the game continues.—L. M. T.

When you see a Felton-Sibley poster you know there's a Felton-Sibley dealer somewhere nearby. You'll do well if you consider his store your paint-service-station. Felton-Sibley dealers are selected because they know paint and paint problems. Get the benefit of their experience—it won't cost you a nickel. Ask to see the new Felton-Sibley color guide—see 15 buildings (large size) just as they actually look when finished.

Don't neglect a Cold

Just Rub Away Danger

Serious illness often starts with a cold. Ward off your colds with Musterole (it may prevent pneumonia). Don't take chances. At the first warning sign, rub Musterole on the chest and throat. It tingles, penetrates and draws out soreness. Musterole, is a counter-irritant that helps to break up a cold. For prompt relief from chest cold, croup and bronchitis, tonsilitis, neuralgia, rheumatism and headache, pains in joints and chilblains rub on Musterole. Keep a jar handy.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

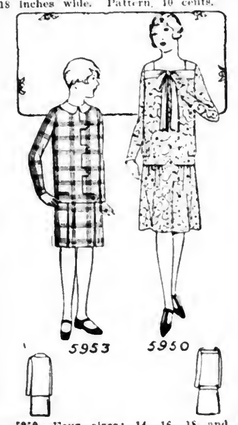
THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

Youth Demands Smartness

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5953.—Four sizes: 6, 8, 10 and 12 years. A 10-year size will require 2⅝ yards of 36-inch material. To face the collar with contrasting material will require ¾ yard 18 inches wide. Pattern, 10 cents.



5950.—Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 2⅝ yards of 40-inch material with ⅝ yard of contrasting material for yoke and yoke band portions. Pattern, 10 cents.

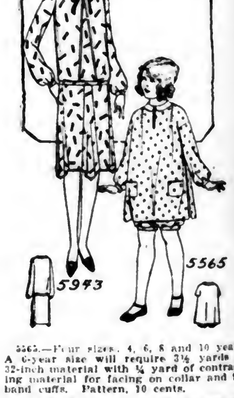
5771.—Four sizes: 2, 4, 6 and 8 years. A 4-year size will require 1¾ yard of 32-inch material with ¾ yard of contrasting material for facing on yoke bands and cuffs. Pattern, 10 cents.

5918.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3¾ yards of 40-inch material; 8⅝ yards of bias binding are required to trim as illustrated. Pattern, 10 cents.

5920.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require 1¾ yard of 36-inch lining for the underbody, and 4½ yards of 32-inch material with 1¼ yard of contrasting material for facing on collar and cuffs. Pattern, 10 cents.

5934.—Four sizes: 2, 4, 6 and 8 years. A 6-year size will require 1⅝ yard of 40-inch material. To trim as illustrated will require 1⅝ yard of braid or narrow binding. Pattern, 10 cents.

5943.—Three sizes: 16, 18 and 20 years. A 16-year size will require 1¾ yard of 32-inch lining and 3 yards of 40-inch material with ¾ yard of contrasting material for collar facing. Pattern, 10 cents.



5565.—Four sizes: 4, 6, 8 and 10 years. A 6-year size will require 2½ yards of 32-inch material with ¼ yard of contrasting material for facing on collar and for band cuffs. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Country Joys Are Best

I HAVE been a reader of Pennsylvania Farmer for many years. We are farmers, and I am glad of it. Here we are in one of the loveliest farm valleys in western Pennsylvania. Our farm has been in the family for three generations, and the old farm house has but a story and a half with the kitchen built on. The huge cross beams are brown with age, but still in fine condition.

This glorious autumn morning has been filled with the usual tasks, but I have taken time between chores of washing dishes, sweeping and dusting, to step into the beautiful out-of-doors. A wonderful mist has rolled up from the river and even now at nine-thirty the sun is obscured. In the distance I hear the call of crows busy in some corn field. The hum of the potato digger comes to me across the fields. I pause again and hear birds discussing their journey to the sunny South. The sun is now breaking thru the mist, and I am reminded of that grand old hymn, "When the mists have rolled away."

We country folks surely have our share of blessings and I would not trade my lot for city life even if each year does seem to bring an added struggle with nature. The joy and beauty of the farm, the country's many charms are richer in blessing than the city's advantages.—M. A. M.

Friendly Talks

By Edgar L. Vincent

IF WE do not take a day off now and then when we need it, the time will come when we will have to take a vacation lasting many a day, whether we need it or not.

Down in our barn we have an old oxbow. The time was when the stick of which that bow was made was as straight as an arrow. Then somebody wanted an oxbow and he cut that little bit of a sapling, bent it around in the right shape and there it has stayed ever since, till it is as dry as a bone, and there is not an ox nor a horse anywhere that could straighten it out. It might be broken, but it never could be unbent.

Let Us Relax Now and Then

I know a farmer who is just that way. He worked hard and he never took time to look up and breathe and see what the world looked like. He was saving and accumulated some money. But the day came when his vacation began, and it is going to last as long as he lasts, but not one single minute will he know what real peace of mind is, for his mind is gone, broken down, and I know nothing more terrible than to have a broken mind in a broken body. If that man had only begun years ago to let go once in a while and change the drift of his thought, then he might have kept on living and enjoying his farm and the good things of life till he was an old man.

But let us not forget that we need to begin early to relax now and then. If we do not, it may be we will lose our power of enjoyment, so that our vacation days will be only an aggravation, bringing us nothing of good.

Our Minds May Become Warped

There is such a thing as letting our minds get so warped that nothing on earth can straighten them. The farm is a beautiful place to live; I know of none more so. There is something about our work that is very fascinating. To step out over the sweet-smelling earth with a sack of grain and scatter it broadcast, thinking away on to the days when the seed will come back to us a thousand fold; and then to watch it grow, first the thin, narrow blade and then stretching up into stalk and finally into ripened kernels—oh, what a mystery it is! It is fine to think of the expansion of a business project and we enjoy it; and yet, the things that take place on the farm year by year are far more so.

But if we get so "bound up" in our work that we think of it day and night, year after year, by and by nothing else will have any charm for us, and even the work we loved so much at first will grow to be a back-breaking and a heart-breaking burden.

Take a Day of Rest

And here is the lesson of the oxbow. As we go along it stands us in hand to unbend once in a while, if only a day or two at a time. Yes, each day as it passes may bring us opportunity to let the tired muscles and nerves rest. We have so many fine books, papers and magazines in our day! Music is in almost every farm home. The radio is fast taking its place in the life of the farm. A little while given to these as we pass along will make life happier and add to the length of our days.

Some men take no day of rest at all. The week hurries on and finds them delving in life's ordinary cares. No rest even on one day of the week. There can be no greater mistake. Stop when the Sabbath day comes, men of the farm! Unbend. Think of good things. Relax. Look up to God and heaven. Enjoy life now, today! Make every day a little bit of a heaven. If you do not, there may be no heaven for you either now or hereafter!

The "keep out" sign — *for mud and cold*

Get this extra protection plus extra wear from pressure-toughened rubber

EXTRA life, more strength, added toughness are pressed into Goodrich Hi-Press Rubber Footwear when it is made. That's why thousands of folks on farms are getting sure protection—and more months of wear—from the Hi-Press brand.

You find this name on boots, gaiters, galoshes, rubbers—all kinds of rubber footwear for use on the farm. And you find big, thick soles of live, springy rubber—strong, honest reinforcements—and real comfort in every pair.

Women can also have Hi-Press protection. On galoshes or stylish light rubbers the name means that extra wear is pressed in the rubber. And ZIPPERS—with the genuine smooth-gliding HOOKLESS FASTENER—also have pressure-toughened soles.

The Hi-Press brand is in such demand that over fifty thousand dealers in towns and cities of every size can supply you.

TIGHT BINDING

OUR YOUNG PEOPLE'S FORUM.

All Will Want to Try This

DEAR FORUM BOYS AND GIRLS:—As I promised you, I'm publishing a list of the Forum friends who attended our Make Believe Party. You'll find on the page, too, a list of the prize winners.

Now we're going to have a Treasure Hunt. This will be slightly different from your last Treasure Hunt but I'm sure you'll have just as much fun as you did the last time you went scampering thru Pennsylvania Farmer.

The ten sentences listed below are hidden away somewhere in the advertisements appearing in this week's issue. Just as soon as you find the hiding place of these sentences write and tell me where you found them. Tell me the name of the advertisement in which the sentence is hidden and the number of the page on which the advertisement appears. Some of the sentences may be standing boldly in front of you but to find most of them you'll have to play a real game of hide and seek.

All contest papers must be postmarked not later than November 19. Address your letters to the Forum Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa. I mustn't forget the prizes. There will be six prizes awarded—three for Forum friends over twelve and three for those twelve and under. And, you mustn't forget the closing date of the Treasure Hunt, November 19.

THE FORUM EDITOR.

1.—They have had too much experience with the oil itself.
2.—The College Feed Conference Board is composed of dairy feeding specialists of nineteen state colleges of agriculture.
3.—The benefits show in the milk pails—inevitably.
4.—That means more dollars in your pocket.
5.—On galoshes or stylish light rubbers the name means that extra wear is pressed in the rubber.
6.—And even the children should know it as a storehouse of wonderful things that they want and perhaps can have as an extra reward for efforts in school or home.
7.—The trim-shaped leg prevents the foot from slipping up and down.
8.—Give it a thirty-day trial and if not entirely satisfied, we will pay the return freight.
9.—Get the benefit of their experience—it won't cost you a nickel.
10.—For all stock—dry stock, horses, sheep, swine and steers it is unexcelled.

From Forum Members and Friends

Dear Forum Friends:—I am sending a cake recipe.

½ cup shortening
1 cup sugar
1 egg
½ cup milk
1¾ cup flour
4 teaspoons baking powder
1 teaspoon cinnamon

Cream shortening, add sugar, then egg yolk, mix well. Add alternately a little at a time, the milk and the flour which has been sifted with the baking powder and cinnamon. Fold in the egg white beaten stiff. Bake in greased loaf pan from 35 to 45 minutes.—Faye Schuyler, thirteen, Montour County, Pa.

THELMA L. MILLER, (X), Franklin County, Pa.

Dear Forum Friends:—I have a little black cat for a pet. He plays all the time. It seems as if he never gets tired. Here are some riddles:

1. What coin is a fowl?
2. How are bread and sun alike?
3. What has a head and heard and no body?
4. Why does a railroad official cut a hole in your ticket?
5. Why is there water in a watermelon?

I hope you all like to answer riddles as well as I do. I wish the Forum page great success.—Jennie V. Nace, York County, Pa.

Dear Forum Friends:—Rap a tap, tap; may I come in? Hello, everybody! What, you all sitting around the fire? Well, I will have to admit it is chilly this morning. We had a frost last night. If won't be long until the leaves on the trees will be turning golden yellow and red and the children and young folks will be scampering out to the nut trees with buckets and bags to gather nuts. Be sure you leave a few for the squirrels so they will have something to eat when the ground is covered with snow.

Then some morning we will peep out the window and find the ground covered with snow. Then out will come old Dobbin and the sleigh and sleds and we will all go for a ride ending at some farmhouse eight or ten miles away where we will be greeted by a nice warm fire and spend the evening roasting nuts and popping corn and playing games.

I expect most of the folks are going to school now. I am not at present as I have just got home from the hospital where I was operated on. I hope none of you had to miss school on account of sickness.

Well, potato growers, I think it is about time for you to get busy and tell about your work. We have about an acre of potatoes this year. I think it won't be long until we will be getting busy digging them.

Well, as I am an unexpected caller, I will bid you good-day hoping to see some Washington County letters on the page soon.—Ruth Weir, (X), Washington County, Pa.

Prize Winners

MOST ORIGINAL—Agnes Risinger, (X), Indiana County—Turnabout.
MOST POPULAR—Irene Kohler, (X), Bucks County—Dutch Girl.
FUNNIEST—Millie Kelso, (X), Jefferson County—Owl.

Dear Forum Editor:—I received your membership pin and thank you very much for it. Nigger and Tabby are not grown-up cats yet. We have two more little kittens, Tommy and Tinker.

I am ten years old and in the sixth grade at school.—Jane C. Bair, (X), Perry County, Pa.

BROTHER AND TEDDY
Margaret Morrison, Warren County, Pa.

Dear Forum Friends:—Is there still a vacant seat in your circle? I would like to become a member of the Y. P. F.

I do not see many letters from Lebanon County. Wake up boys and girls from Lebanon County.

I live on a farm with my aunt and uncle. How many other Forum members and friends live on a farm? My birthday is September 3rd. Have I a twin? We have four large cats and five small cats. The kittens are very cute. Every evening Tabby will go along with me to fetch the cows. Tabby and I often play ball, tag and hide-and-go-seek. If she finds me she goes and taps the pump which nearly always is "base."—Blanche Layser, eleven (X), Lebanon County, Pa.

Dear Forum Friends:—I am sending you some riddles.

1. What goes down the hill with its tongue hanging out?
2. Why does a chimney smoke?
3. What is black and white and read all over?
4. How many sticks go in a crow's nest?—Edna G. Huegel, eleven, Schuylkill County, Pa.

Those Who Attended Our Make Believe Party

PENNSYLVANIA

Bradford County, Roberta Snyder (X), Spirit of Halloween. **Bucks County,** Irene Kohler (X), Dutch Girl; Marion Ford, Little Girl. **Cameron County,** Eleanor Goss, Old Maid. **Chester County,** Mildred Russell, Laundress; Pearl Griffith (X), Corn Stalk; Clarabelle Chambers, (X), Old Woman. **Clarion County,** Leota Elder, Ghost. **Clearfield County,** Lerner Baughman (X), Country Lass. **Crawford County,** Charles Grinnell (X), Ghost; Anna Grinnell (X), Devil. **Elk County,** Theodora Grumbacher (X), Devil. **Fayette County,** Ethel Richards (X), Devil. **Indiana County,** Agnes Bistmer (X), Turnabout; Martha D. Thomas (X), Old Fashioned Girl.

Answers to riddles submitted by Gertrude D. Bogar, Salem County, N. J.
1. When he has blinds on.
2. A bald head.
3. A little before Eve.
4. A skating pond.

Jefferson County, Millie Kelso (X), Owl; Mary E. Kellar (X), Autumn; Virginia Wineberg, Pig. **Juniata County,** Alenna Rhine (X), Autumn Elf; Grace Varner (X), Negro; Martha J. Gilsan, Old Man. **Lancaster County,** Ethel Mumma (X), Sailor Lass; Edith B. Rohrer, Old Woman; Verna E. Herr (X), Clown. Frances Weaver (X), Jiggs; Sadie Herr (X), Negro. **Lebanon County,** Myrle Light (X), Witch. **Lehigh County,** Verna M. Bittner (X), Carnival Girl. Muriel G. Kratzer, Spanish Girl. **Luzerne County,** Harriet Marcy, Spanish Girl; Geraldine Cornell, Bride. **Lycoming County,** Catherine Lorson, Negro; Inez Bower (X), Pumpkin.

Mifflin County, Hazel Huffman, Hobo; Dorothy Huffman, Flapper; Milton S. Huffman, Santa Claus. **Monroe County,** Lulu Shotwell, Tramp. **Montgomery County,** Pearl Astheimer (X), Southern Mammy. **Schuylkill County,** Ruth Kriner (X), Tramp. **Somerset County,** Helen Ott, Negro. **Sullivan County,** Ruth Huffmaster, Negro; Ruth Gibbs, Negro; Vernie M. Peterman (X), Negro. **Susquehanna County,** Gertrude Kiefer, Negro. **Washington County,** Mary Thomas (X), Kid. **Wayne County,** Peter Spewak (X), Tramp. **Westmoreland County,** Majlene Martz (X), Devil; Bernice Rupert (X), Flapper; Earle F. Bolton (X), Clown; Mary Bortz (X), Monkey. **York County,** Catharine Shearer, Clown; Helen Ort, Witch; Frances Shearer, Cinderella.

NEW JERSEY

Mercer County, Alice Rosso (X), Corn Shock.

NEW YORK

Sullivan County, Ethel Ehrle, Cross Word Puzzle. **Ulster County,** Elizabeth Walker, Witch.

DELAWARE

New Castle County, Edna Hartsch, Monkey; Myrtle Bartsch, Witch.

MARYLAND

Caroline County, Dorotha Jones, Indian; Lucy Jones, Clown. **Worcester County,** Hilda Hounde (X), Ghost.

The following contest letters were received but no addresses given: Nellie McLaughlin, Clown. Erma Kline, Indian. No name, Farmer Boy.

Wouldn't It Be Fun?

ON PAGE 16 of last week's issue there was a picture of a Colonial History Quilt, made by outlining figures stamped on squares of white muslin or other cloth. Perhaps you would like to make one for a Christmas gift or for yourself. Wouldn't it be fun? You will know and love the characters on this quilt, because they tell the story of our country in its early days. Each of the twenty blocks is eight inches square and comes on a hot-iron transfer pattern by which you can stamp the design on a square of material. After you have stamped the design, embroider it with outline stitch, then set the twenty blocks together as pictured last week.

The twenty hot-iron transfer patterns, in one package, with complete instructions for making, will be mailed postpaid upon receipt of fifty cents. Address orders to Editorial Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—There's an old, well-known rhyme jumbled up in this week's puzzle and I believe most of you will be able to straighten out the words so that they make sense. Some of you answer the puzzles each week, you tell me, and quite a number of you send your answers in almost every week. Maybe you would like to tell me which puzzles you like best or what kind you would like to have. I will be glad to hear about what you like, the of course, we may not be able to have everybody's favorite right away.

When you have found the answer to this week's puzzle, send it to me on a postcard or in a letter so that it reaches me by November 19th. Please tell me your name, your post office address, the name of your county, when your birthday comes and how old you are. The prizes go to the children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

Old her poor the cuphoard none
Mother got dog there was had
Hubbard to a got bare dog
went cuphoard bone she und poor
to the but when so the

The answer to the puzzle in the issue of October 22 (the one about what Lucy weighed) is: CANDY

The prize winners are: Ruth Allio, age 10, Tylersville, Pa.; Annie V. Broody, age 12, Hatboro, Pa.; Ruth E. Downing, age 7, Tully, N. Y.; John W. Frye, age 12, Mt. Pleasant, Pa.; Walter Hibbard, age 9, Campbell, N. Y.; Minnie Kramer, age 9, Allentown, N. J.; Edgar McFarland, age 9, Rossister, Pa.; Betty Matthews, age 9, Pompton Lakes, N. J.; Everett Murphy, age 10, Blackwood, N. J.; Frank Volz, age 10, Philadelphia, Pa.

PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood)

1.—Dr. Chevalier Jackson, of Philadelphia, the famous surgeon who originated the method of removing foreign bodies from the lungs by means of the bronchoscope. Patients come to him from all parts of the world. On October 23, Dr. Jackson was decorated by France with the Cross of the Legion of Honor.
2.—Governor Fisher, of Pennsylvania, speaking at the unveiling of the Meade Memorial in Washington on October 19th.
3.—A unique loud speaker for a radio set has been constructed by a Bloomington, Illinois, doctor. He used a model of the ship commanded by Columbus, the center sail being the amplifier and the inverted sail the loud speaker.
4.—An ambulance plane which rushes aid to the sick and injured in out of the way places or carries them to San Antonio for treatment is working in South Texas.
5.—The only woman mail carrier, Miss Jessie McCaa, is one of five carriers serving the country near Franklinville, N. Y.
6.—Dorothy and Jean Seavey with a huge mushroom which was found near Chicago recently.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

WITH that they all went in again and I, who had left the wagon and team in other hands, feared this was the last I was to hear. But I reckoned without Jennings. He came slouching across the yard shortly and beckoned me to him.

"Let's go over and sit in the shade and yarn a bit," he invited. I followed him to the east side of the farthest wing. There we sat down but for several minutes Jennings did not say a word. Then I heard from within the clatter of stools being pulled over a puncheon floor, and a man's voice, Hunter's, I think, began to speak. I could hear the words quite distinctly.

"Let's get out," I said in a whisper to Jennings. "We can overhear what they're saying."

The trapper winked at me. "I move for nobody," he asserted. "If they don't want us to hear, let 'em move."

This was what he had been, after all along. I felt some compunction at eavesdropping, but after a minute my curiosity got the better of me and I settled back to listen.

Hunter was saying that Regulators from all over the back country were massing some miles to the east. Two thousand were in camp and more on the road.

"The governor will soon see that he dare not fight all western North Carolina." It was Husband speaking. "A few days more and we shall have four thousand to meet him. He will weaken as he did this winter when you began your march to Newbern."

Carnes broke in and his voice had a sarcastic edge to it.

"Of that two thousand, how many are armed?" he asked.

No one knew. There was some guessing. One-fourth to one-third. One voice, unknown to me, declared that many had been warned to leave their rifles at home. This was to be a peaceful mass meeting, not a battle.

"Whose doing was that?" came an angry voice. "There is blood on the hands of the men who send unarmed farmers to meet Tryon."

Jennings nudged me. "John Gillespie," he murmured. "If they listen to him—"

THERE was a clamor of argument within. Husband's side had plenty of support. They would overawe the governor with numbers. No fighting. Let them go barehanded to the meeting. There was even some bitter criticism of the blowing up of Waddell's powder, lest that make a peaceful settlement impossible.

"Frohawk and Rutherford were ready to quit. They knuckled under to us last month. Let them talk to the governor."

True enough, the sheriff of Rowan had agreed to make restitution of fees unlawfully collected. But when was that restitution to be made? May 3rd. To be sure, and this was May 13th.

"Tryon barred Frohawk from the muster because he promised us too much," someone contributed.

White broke in. "Tryon has over a thousand men now. If Waddell had joined him and gathered a militia on the way, he would have nearer two thousand. Is that what you want? Shall we send that wagon of powder back to General Waddell with our compliments?"

Hunter spoke again. "We have invited Mr. Carnes to give us his views. I suggest that we listen to him now."

There was a moment's silence.

"'ISSACHER is a strong ass, crouching between two burdens. And he saw that rest was good, and the land, that it was pleasant; and he bowed his shoulder to bear and became a servant to tribute.' This is my text," Carnes began, and his tones were loaded with irony. "I learned it from you, Mr. Husband, but I did not think to find that Issacher is such an ass as you seem to want to make him.

"Tryon will fight. Send him men to propose a peaceful settlement and he will imprison or hang them. Meet him in a peaceful demonstration and he will answer with grapeshot. You have only the choice between outlawry and rebellion. I speak particularly to the men in this room. If you try to make your peace with Tryon, you will be tried by a dummy court and hanged. If you fight, you will be outlawed and the price of 100 pounds and more put on your heads."

"Then we are doomed either way," someone put in.

"You are doomed, indeed, unless you fight and win. Therefore, I say, the only thing to do is to strike and strike hard. Organize your men into companies; scour the country for arms; fall back before the governor until you are equipped; and then see that Tryon conquers no more than six feet of Orange County soil."

There was a silence at this, and then a confused murmur. It seemed that Carnes stood alone. No others were ready for a step so violent.

"Fighting is out of the question," one offered finally. "The governor has cannon. What can we do against artillery?"

"Pick off the gunners and spike the guns," said Carnes shortly. "Bushwhack the rest until they break and then chase them back to Newbern. Kill fifty and they will waver; kill one hundred and they will run."

But the militia were not enemies, some protested. They were good men of the colony, but with the wool pulled over their eyes. A parley would show them how just the Regulator's cause was. They would prevail on the governor to retreat, just as Waddell's men had prevailed on him.

I heard a stool shoved back and then Carnes' voice.

"I am thru with you," he cried. "Go to destruction your own way."

The door banged behind him.

I jumped up and hurried to the front door. Carnes came out. He looked sick and white under his angry flush. His eyes were feverish.

"We're licked." His tone was that of a man who had shot his bolt and was done. "Those donkeys in there will run their heads—and ours too—into a noose. Find a blanket for me. I want to lie down."

I ran off to find one and went plump into a tall man who was harranguing a group of three or four in the center of the yard. He grabbed me with one hand, and held me kicking, while he finished his sentence.

"Chastisement may be in order," said this man mournfully and groaning a little, for I had kicked him sharply on the shins. "Be not in too much haste to listen to the words— Upon my body, it is the lad from Philadelphia."

Then I got a good look at him for the first time and gasped too.

"Zion Alexander." I marvelled. "I thought you over the mountains."

He nodded. "Over the mountains and back again. And with me one who will lead us out of captivity. I have found a Moses, if not a Joshua. Come with me."

I WAS curious enough to follow, tho it would have made no difference if I had objected for Alexander kept an iron and imperative grip on my arm. We came out to the road and found a young fellow, only a few years past my own age, talking with two farmers. He was of medium height, with fine dark eyes, and a sobriety of demeanor that made him seem much older than he was. His buckskin garments were dirty and well worn; he himself was trained down like a greyhound with hardly a pound of fat on him.

He greeted Alexander with an indulgent smile, and nodded when he named me. My uncle's name was familiar, it seemed.

"Robertson, James Robertson is my name," he added, "altho my friend here insists on calling me by some name out of the Old Testament. Sometimes it is Moses, when I am in good favor, but at other times I am given titles of somewhat less repute.

"Yes, I have been over in the Holston Valley and am going back. Fine country, good farm land, and good hunting. No sheriffs to bother and the Cherokees seem friendly. I want twenty families to go with me, and have twelve. Are you and your uncle interested?"

I said I had not seen my uncle for some time, and added that he would be likely to stay to the end of the struggle between the Regulators and the governor. At this Robertson frowned and was silent a moment.

"This is not the time for warnings, perhaps," he ventured. "Yet I think we are overmastered here. We would do better to let the governor have his way for once, and move the back country folks over the mountains. North Carolina writs do not run there and"—his face hardened—"I doubt if they ever will."

"I pointed to Husband's well tilled farm. Robertson caught my meaning and nodded.

"Perhaps not by choice," he admitted. "Yet if they are forced to leave, it may be different. I leave soon. If things do not go well here, you may do worse than to follow."

He spoke a final word to the other two men, mounted his horse and rode on. Alexander looked after him and shook his head.

"The lad is right," he admitted. "Yet I feel it laid upon me to stay first and strike a blow against the Philistines, even tho it be with no more than the jawbone of an ass."

"Take Husband," said a familiar voice. Carnes was standing behind me.

ALEXANDER looked at him and then, without speaking, ran his hands over Carnes' face.

"Can you ride?" he asked.

Of course he could, Carnes answered with an oath. Ride or fight—fight any long-faced psalm-singer in the country. He staggered a little as he said it.

Alexander paid no attention to his words, but turned to me.

"This man is mightily sick," he warned. "Get horses at once and take him,—let me see—yes, to Dr. Caldwell. Straight east and ask at the first turn. Everyone knows him."

Carnes protested, but his protest had little conviction. Presently I had him mounted and was going with him, at an easy trot, down the lane. We looked back. There were more men coming up to the house, but no sign of the leaders. The council was still holding.

On the road we passed knot after knot of marching men some on horseback and a few on foot. Only a small number had arms. Carnes shook his head at that. They directed us well, however, and we came after what was a fairly easy ride for me down the road south from Martinsville. There at a crossing we waited for another rider.

"Dr. Caldwell—certainly. Just a quarter of a mile east. You can see the house from here."

It was a double cabin house with the usual outbuildings around it. I dismounted and ran up to the door. A tall, strongly built man opened it. He was over six feet and in spite of his fifty years—for so I guessed his age—looked fit for any sort of a bout.

"Dr. Caldwell?" I asked. He nodded.

"We need your help," I said and went back to Carnes. The doctor followed.

Carnes, swearing feebly, slid off his horse. The doctor gave a somewhat ironic glance at me.

"I am both a doctor of divinity and of medicine," he declared. "In which capacity can I serve you?"

I explained briefly. Together we helped Carnes into the house. A bed was found for him and the doctor went to work to dress his wound again.

After that he followed me out of the room and shut the door.

"He must stay quiet for a couple of days at least," he told me. "The wound is nothing, but exposure and lack of care have aggravated it. We can take care of him here. How did he come by it, if it is a proper question to ask?"

I told him and he nodded. "One of the Black Boys, eh?" he commented. "I rather guessed as much. That was a bad business."

I was not so sure. Waddell was stopped from aiding Tryon. It might mean victory to the Regulators.

The doctor shook his head. "Violence will do no good now. We cannot have half the colony fighting the other half. Some day soon we shall all be working together and then nothing can save governors like this one. But now—well, I shall try to see the governor soon. Perhaps something can be done yet. I fear not, tho. There are too many unreasonable men on both sides."

I slept that night on a bunk beside Carnes, and tossed and rolled almost as much as he. Again I wondered what I was doing in this conflict. A battle, or a massacre was immiment. I might put myself in the way of capture and then there would be little hope for me. And at bottom, why should I care what happened to these backwoodsmen, so my own skin was safe? I went to sleep, with the problem no nearer settled than it had been.

Early in the morning there came the sound of hammering on the door. Sleepy-eyed I rolled out to find Dr. Caldwell dressed and unbarring the door. I heard the hoarse tones of a man outside and then the drumming hoof beats of a horse dying away in the distance.

Caldwell came back. His air was serious.

"I am riding east at once," he declared. "Your friend will do very well if he keeps quiet. Do you see to it."

I asked him what had happened.

"The worst, perhaps," he answered gloomily. "Governor Tryon marched yesterday.

"He camped on the Alamance last night."

"How far is he?" I asked.

"Only a few miles. If they come on again today, they may be in the dooryard here by afternoon."

"But the Regulators are between," I protested.

He gave me an enigmatic look and went out. Carnes sat up in bed.

"Bring me my boots," he cried hoarsely, "and get my horse saddled. We'll show them some fighting before they get this far."

TO MY protests Carnes paid no heed. Indeed it may be doubted if he heard them. He was sitting up on the edge of his bed, and shaking his head like a man who had just been over his depth in water and has not yet got the water out of his ears.

"You can't sit a horse," I told him again, and he only grunted something unintelligently in answer. For a moment he sat still, knitting his brows, and then, with the air of a man attempting a difficult and almost impossible feat, he got to his feet and stood balancing himself for a minute. His clothes were piled in the corner. On them he fixed his eyes and took one hesitating step forward, then another, and in the next second, before I could reach him, he had plunged forward to the floor and lay still.

I called and Jim, Dr. Caldwell's big black Negro servant, came ambling in. The doctor had already ridden off. Together we lifted Carnes back into bed. To Mrs. Caldwell I suggested that if Carnes made another attempt to start out, she should tell him I had gone out for news and he was to await my return. If that failed, Jim could hide his clothes and forcibly keep him inside.

Jim brought my horse out and I started down the road east. There were more men on the road this morning. Two miles out I found Dr. Caldwell halted and talking with one group. He broke away as I came up and I spurred up to ride with him.

Of the Regulation he would not talk at first. He did converse about other matters, however, principally of his own experiences in the province. Among other things, he told of how he came to be a doctor of medicine.

"In the early days fifteen or twenty years ago, if a man in this country got sick, he died or got well of his own accord. Now he gets a little help—one way or the other." The doctor had a cold humor that flavored his talk with irony. "When the Moravians first came south, one of them was a doctor of sorts and folks used to go a hundred miles to be treated."

FINALLY it happened that a young surgeon, with his training newly finished, decided to set up practice in Orange County. He boarded at Caldwell's and after only a short stay, sickened and died in spite of his own skill. His effects were sold, and Dr. Caldwell bought the medical books and equipment.

"It was my third calling," said he. "I was a carpenter as a young man, and perhaps since I started studying late, the habit of studying still clings. So I spent my spare time over his books and finally learned enough to be of some help to sick folks around. That is, I can set broken bones, and probe for bullets and give doses for malaria."

He paused and looked at me keenly.

"What are you doing here? Looking for more powder to blow up?"

I shook my head. "I am looking for my uncle. He will be at the musters or will send word. He is too strong a Regulator to bide at home on a day like this."

"And you?"

"This is not my quarrel. I had promised to help get the powder safe to Hunter. That is done. Now I owe nothing to anyone."

Dr. Caldwell raised his eyebrows. "To no one?"

There came back to me in that instant the picture of four rifle muzzles facing me in the dusk. My hand clenched.

"To Colonel Fanning, perhaps. And to him only an ounce or two of lead."

Caldwell shook his head. "That is hardly the spirit of a Christian—or of a neutral," he observed dryly. "You had best go back before you involve yourself in another folly."

"I am going on," I declared hotly and would have put spurs to my mount to draw ahead. Caldwell laid a hand on my bridle.

"Look you," he said sternly, "I am going to get two or three Regulators to join me in a meeting with the governor. We may get peace and what we desire. Yet all we do may be wrecked by the crazy action of some young hot head. Keep that in mind. A shot fired too soon may bring on a battle and make the man who fires it the murderer of a hundred men. Do not be that man."

He rode off and I, after staring after him a moment, went on more slowly. The truth of his words was apparent. I told myself again that I would find my uncle and take no part else. Yet for all that, I took the pistol from my belt, looked it over, recharged it and took care to see the flint was tight.

I had been riding thru groups of men all morning and now came to a space, set about with oak and hickory groves, where wayfarers overflowed the highway and made small knots scattered among the trees. There were campfires here and there, and I thought for a moment these were men just getting a late start to the muster. But presently I found that altho men were shifting back and forth from group to group, the movement forward had stopped. At length it was borne in on me that I had reached the camp and muster-ground of the Regulators.

Never was a camp less military in appearance. Men from different neighborhoods had come together, found a camping spot and settled down to wait. There was no order. Men wrangled over sites for camps. In search of good places to cook and sleep, some wandered farback in the woods so that the thousand or more on the ground were spread over a mile or two of woodland.

I found a place to tie my horse, dismounted and began to wander around. A group near at hand attracted me. I strolled over.

"Built like a palace," one man was saying, "and cost seventy thousand pounds of money took offen poor fel-

This Furnishes Cheap and Reliable Power

A device constructed beside a stream of water by Joseph Beiler, of Ronks, Pa., to furnish power for well pumping. The power is transmitted through wire cables to two sets of farm buildings about equal distances from the creek. The steel water wheel is securely supported with a concrete base and revolves to operate the cables by the lifting motion of the stone weights.—N. S. G.

Cold Feet

Everything was in readiness for the marriage ceremony, and both groom and best man had arrived at the church in plenty of time. The former, however, was uneasy.

"What's worryin' ye, Tamson?" asked the best man, tiptoeing up the aisle. "Ha'e ye lost the ring?"

The other gazed at his friend's immaculate attire and general air of gay bachelordom. Then he heaved a woeful sigh.

"Na," he answered rather despondently; "the ring's safe enough man, but I've lost ma wild enthusiasm.

A Real Alibi

"Are you positive," asked the attorney of Liza, who was on the witness stand, "that you know where your husband was on the night this crime was committed?"

"Ef Ah didn'," replied the witness firmly, "den Ah busted a good rollin' pin ovah an innercent man's haid, dat's all!"

Getting Credit

Mr. Milligan—If I'll be I'aving security equal to what I take away will yez trust me till next week?

Mr. Sands (the butcher)—Certainly.

Mr. Milligan—Well thin, sell me two av thim hams an' shape wan av thim till I come ag'in.

Against His Code

Blackstone—Why didn't you go to that actor's assistance when you saw he was getting a beating?

Actor's Friend—Not me! He never would forgive me for trying to take his "part!"

Hard Luck!

Thrilled Spinster—Oh! That man rushed right up to me, crushed me to his bosom and tried to kiss me! It's lucky you came along, Mr. Policeman.

Uniformed Man—Yeah. On'y I'm not a policeman. I'm his keeper.

Noting the Difference

"Why did you stop singing in the choir?"

"Because one day I didn't sing and somebody asked me if the organ had been fixed."

Just Like a Woman

She (after a bitter fight)—Well, the only thing left to do is to divide this house in two, you can have one side and I'll take the other.

He—That suits me, what side shall I have?

She—You can have the outside. I'll take the inside.

Knew the Answer

Mother—If you wanted to go skating, why didn't you come and ask me first?

Sammie—'Cause I wanted to go.

Knowit—Well, I showed up the teacher before the whole class today.

Blowit—How? Wise us up.

Knowit—She asked me for Lincoln's Gettysburg address 'n' I had to tell you he never lived there. Oh, you should have heard the class laugh then.

When Candor Rules

"It often happens," said a doctor, "that a man who is a lunatic is entirely ignorant of the fact." Unless he happens to be married, of course.

His Ailment

Patient—If my wife wants to know what is the matter with me, what shall I say?

Doctor—Oh, just tell her you're suffering from syncopation.

Patient—Syncopation?

Doctor—Yes,—an unsteady movement from bar to bar, you know.

"tag" stores are farm family stores!

THE "Farm Service" Hardware Store near you is a store for all the family. The tools, supplies and equipment that father wants are there. All the kitchen needs, as well as many other things that are essential to the operating of the farm home, are a part of its stock. And even the children should know it as a storehouse of wonderful things that they want and perhaps can have as an extra reward for efforts in school or home. The "tag" store is one that you should know better. It offers you the opportunity to "see before you buy" to get the utmost value for your money, and its personal, friendly service is of great value to you.

Remember that you are always welcome to go in and look around to compare prices and values and to ask questions. The "tag" in the window is your invitation.

Your "Farm Service" Hardware Men

Machinery Repainted this Winter Is Ready for Spring Work

IT IS not unusual for a farmer, especially in the busy season, to carefully "park" the plow, the harrow, the tractor, or other expensive pieces of farm equipment under a convenient tree. The rain and storms beat down upon it, causing rust and decay, and new equipment is needed before it's time.

There should be ample time during the winter months to rejuvenate this expensive and useful machinery and if the equipment is moved into the barn or under one of the sheds that are usually found on most farms, much of this wear and tear may be repaired.

With the aid of a little steel wool or emery paper the scale and rust may be removed from the metal parts and a coat of good rust inhibitive paint may be applied. The wooden handles or framework may be sand papered smooth and given a coat of good enamel. The moving parts of the mechanism may then be thoroly oiled and lubricated with the result that the equipment will go thru the winter unscathed and will be spick and span for the spring work. The labor involved will not be great and the saving will amply repay any trouble this work involves.

Of course, there may be many little odd jobs inside of the house that may claim attention, such as the painting or refinishing of furniture. For this class of work there are many pleasing stains and varnish stains prepared, and a thrifty farmer or his good wife may very profitably turn their attention to these details. Undoubtedly, your own paint dealer will be glad to tell you what to use and how to use it and the only caution we might add is to be sure that the surface of the article is carefully prepared and cleaned before the work of painting is started.

Here are some other hints that may be helpful.

Be sure, in using paint or enamel, that the mixture is properly stirred and mixed before applying. A little time, care and attention to this will prove a decided advantage in the finished job.

Keep Your Brushes Clean

Apply varnish and enamel in a room where the temperature is seventy-two degrees or up. These materials work best at these temperatures.

In applying the paint, brush each coat out at right angles to, or across the previous coat. If the first coat has been applied with vertical strokes use horizontal strokes for the second, or vice versa.

Keep your brushes clean. If the job is finished, clean the brush out thoroly and store away for future use. If there is a lapse of idle time between the start and finish of the job place the brushes in a pail of water. This will keep the bristles and the paint on them soft.

Perhaps it may be interesting to learn something about the history and chemistry of paint in order to better appreciate the value of this material.

Way back in the dark ages each man made his own paint by hand. He used many things, but out of his experience he finally learned that pure linseed oil and white lead did the job best and gave the greatest satisfaction. This was particularly true of outdoor work.

This sort of crude labor was naturally tiresome and gradually as time went on men began to look for paint that was already prepared. Then came the advent of ready-mixed paint and still, in the case of reliable paint makers, linseed oil and white lead were the chosen materials.

Have Paints for Special Purposes

Gradually as manufacturers learned more about paint, it was found that various kinds of paint were best suited to certain kinds of work and so many newer materials were enlisted in paint making.

Thus today we find many specific kinds of paint for specific purposes, such as paint for roofs, smokestacks, barns, floors, decks, walls, metal, implements, furniture, etc., and each of these paints used in its proper place will be found particularly satisfactory for its specialized purpose.

In good outdoor house paints, for instance, nothing is used but good pure linseed oil, white lead, zinc oxide and magnesium silicate and a sufficient quantity of dryer to insure proper drying, and this formula is printed on the label of the can. On the other hand, barn paint carries a large percentage of zinc oxide with an especially treated oil vehicle. Roof paint follows the same formula and the coloring pigment is selected especially for its ability to stand up under exposure.

Wall paint for the inside of the home has a different mission to perform and so its formula must differ essentially from that of outside paint. The same holds true of floor paint, varnish, stains, etc. Thus it may be readily seen that the making of paint and varnish is no small job but rather one that calls into play the utmost of skill, experience and chemical research.

In fact, the topic of paint is a gigantic one. Too big to be covered in a few short words. Volumes might be written about it but this one thing is certain—if you are thinking of painting just follow this simple formula and you cannot go wrong:

Seek out a reliable paint dealer who handles a well-known, recognized line of ready-mixed paints. Tell him what you hope to do. Get his expert advice and rely upon it. He will tell you how to paint, when to paint, and what specific kind of paint to use.—S. R. Matlack.

THIS ARTICLE, by Mr. Matlack, is a continuation of his paint story, "Paint Wards Off the Foe—Decay," which appeared in last week's issue. —The Editors.

"Milk Flows Where Alfalfa Grows"

Salem County Sells the Idea to Its Farmers

SALEM COUNTY has modernized the well-known saying, "The Land of Milk and Honey," and has applied it to a local condition,—"The Land of Milk and Alfalfa." Even with the modern slant they have not left out honey, for it is there in the extra dairy profits that they are applying to the purchase of things that are dear and sweet to the heart of the farmer and his family.

To the Board of Agriculture of this live county goes the credit of adopting modern methods of merchandising in selling the idea of more alfalfa to the farmers. By the use of billboards, posters, follow-up letters and the newspapers, they have been able to increase the alfalfa acreage 33 per cent this fall. Salem County now has over 4000 acres of this crop and ranks with the leaders of the state.

About two years ago, while R. O. Vaughn was county agent, the county was flooded with beautiful black and green posters. Hundreds of these signs were tacked up all over the county. Many a roadside tree carried a sign bearing the words, "Milk flows where alfalfa grows." Under which was a big Holstein cow luxuriously pasturing in an alfalfa field with the tender shoots far above her knees.

Signs Appeared Suddenly

These signs were tacked up in scores of business houses, the banks hung them in the windows, the South Jersey Farmers' Exchange carried one in the manager's office, and in the county agent's office, occupying the most prominent position, was this sign: "Milk Flows Where Alfalfa Grows."

This spring, just outside Salem on the farm of James Pettit, there suddenly appeared a big billboard: "Milk Flows Where Alfalfa Grows, Ask Your County Agent." On the other side of town on the farm of Roy Patrick, sprung another sign: "Alfalfa Acres are Money Makers." A third sign appeared on the farm of Bob Newell. A few days ago we followed the trail to the county agent's office and we were told that we were late as 150 odd farmers had already been there to ask about these fine alfalfa fields. This brings us to the point where the final results of a two-year alfalfa advertising campaign were being checked. It took Salem County 15 years to bring its alfalfa acreage up to 2500 acres, but it took only one year to jump it to 4000 acres.

Sign on the James Pettit farm

In company with County Agent Long and H. R. Cox, state agronomist, I went over the situation of the part the billboards had played in adding to the alfalfa acreage of the county during 1927.

The placing of the billboards in exceptional fields of fine alfalfa was a practical demonstration of what any farmer in the county could do. It backed up the previous year's campaign of posters and vividly pictured the herds of the dairymen producing milk at lower prices and in increasing amounts.

Following the billboard campaign, news articles in the county papers and cards from the county agent's office, brought in 150 requests for aid in planting the crop. Most of these are plantings on farms where alfalfa had never been grown before. Scores of instances are known where old acreages have been increased without writing to the county agent. The new fields are running from 10 to 15 acres each.

Three Dairymen Testify

Does alfalfa pay the dairymen of Salem County? We will let three of its dairymen speak. Bob Newell, living on the outskirts of Salem, also aided in the billboard campaign. He had a big sign on his fields telling about the crop. County Agent Long tells us that Bob has his barns full of alfalfa hay. In fact, more than he can use before another crop is ready to harvest. He has about 15 head of dairy cattle, several horses and only 15 acres of alfalfa.

We found Jim Pettit at the fair grounds. "I have found," said Mr. Pettit, "that alfalfa hay is making me independent of the feed dealer. Since growing alfalfa I have learned what it is to be out of debt with the feed salesmen." County Agent Long told us on the side that Jim in 1926 led the two Salem County cow testing associations on the lowest cost per quart on milk production and alfalfa made it possible.

In talking with Roy Patrick we found an enthusiastic alfalfa grower. Mr. Patrick produces tuberculin tested milk for the city of Salem. "We must have a constant supply of milk every day in the year," said Mr. Patrick in reply to our question on the value of alfalfa. "If we find our milk production is going to slip, either thru dry weather, hot days or other causes, we start right in on alfalfa hay and we can increase our milk production in 36 hours by 20 quarts."

As a result of this billboard campaign, the truck farmers in the Pedricktown section are increasing their acreage. These farmers want hay and they want fertility. We learned of one truck grower who has sown an acreage which he plans to cut one year and then set it to asparagus plants.

Adds $400,000 to Hay Crops

Looking at it from the economic side, we jotted down a few figures while talking to these men. The alfalfa crop alone next year will add a cool $400,000 to the hay crop of the county. Mr. Cox estimates that the hay is worth about $33 per ton and that about three tons per acre are grown in the county. The alfalfa adds plant food to the fertility of the soil to the equivalent of ten tons of stable manure per year. With manure costing $4 per ton at the railroad and another $1 per ton for hauling, it adds an extra $50 to the income per acre of alfalfa.

Salem County dairymen have found that one pound of protein from alfalfa has more milk producing ability than a pound of protein from the best mixed feed. With the big alfalfa hay crop for next year, the use of corn and cob meal, ensilage, alfalfa hay and a dash of linseed oil meal or cottonseed, the Salem County dairymen are on the way to cheaper costs on milk production.

Thanks to the billboard and printer's ink that sold the idea to the farmers of Salem County.—A. K.

Farmers Offered War Explosives

NEW JERSEY farmers are being offered Pyrotol, a surplus war explosive, for agricultural purposes. This offer has been made by the government to the State Board of Agriculture which is to supervise the distribution among the farmers. Only bona fide farmers are eligible to secure this explosive for ditching and other purposes on the farm. A price of nine cents a pound in car lots has been quoted to the State Department of Agriculture.—A. K.

Fruits—Apples, 13@20c ¼ pk, $1@2.25 bu.

Wholesale Grain Market—Wheat, $1.25; corn, $1; rye, 90c; oats, 50c; bran, $36; middlings, $45.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 48½@49c; do, choice, 47@48c; do, good, 45@46c; do, prints, 49@51c; do, do, blocks, 48@50c; do, ladles, 37@38c; Md and Penna rolls, 33½@36c; Ohio and W Va rolls, 33½@35c; storepacked, 33½c; dairy prints, 33½@36c; process butter, 41@42c.

Eggs—Street sales, small lots, nearby current receipts, candled, 48@50c; few higher.

Live Poultry—Old chickens, 4½ lbs and over, 24@25c; do, 4@4½ lbs, 23@24c; do, 3@3½ lbs, 15@18c; Leghorns and other light stock, 14@18c; old roosters, mixed colors, 16@17c; do, Leghorns, 13@15c; young chickens, colored, 2 lbs and over, 25@26c; do, smaller, 22@24c; Leghorns, as to size, 22@24c. Turkeys, young, 8 lbs and over, 35@40c. Ducks, White Pekins, 4 lbs and over, 23@25c; puddle, 4 lbs and over, 22@24c; Muscovy, 4 lbs and over, 22@24c; all kinds, smaller, 16@20c. Geese, Kent Island, nearby, 25@26c; western and southern, 20@22c. Guineas, young, 2 lbs and over, each, 85@90c; do, smaller, 40@65c. Pigeons, young and old, pair, 20@30c.

NEW YORK MARKETS

PRODUCE

Butter—Firm; creamery, higher than extras, 48½@49c; creamery, extras, 92 score, 48c; creamery, firsts, 88@91 score, 41½@46c; packing stock, current make, No 1, 34½@35c; do, No 2 33½c.

Eggs—Firm; fresh gathered extra firsts 48@52c; do, firsts, 40@45c; do, seconds and poorer, 28@35c. In storage, extra, fancy, 35@36c; do, fancy, 33@34½c; do, good to prime, 30@33c; nearby hennery whites, closely selected extras, 72@76c; nearby and nearby western hennery whites, firsts to average extras, 49@71c; nearby pullets, 36@43c; nearby hennery browns, extras, 60@63c; Pacific Coast whites, extras, freight, 68@72½c; do, express, unquoted; Pacific Coast whites, firsts to extra firsts, 55@67c; do, pullets, 37@41c.

Cheese—Irregular; state, whole milk flats, fresh, fancy to fancy specials, 27½@29c; state whole milk flats, held, fancy to fancy specials, 27½@29½c.

Live Poultry—Nominal; no freight quotations; chickens, by express, 22@32c; fowls, by express, 16@28c; broilers, by express, 35@40c; turkeys, by express, 32@40c.

Dressed Poultry—Quiet; chickens, fresh 22@40c; fowls, fresh, 18@22c; frozen, 17 per acre. Owing to the open fall and abundant pasture milk is rather plentiful. Eggs, as usual, are high in price this season of the year. Cows are unusually high in price. Apples are rather scarce and bringing a very good price.—F. H., G, Oct. 31.

Clearfield County, Pa.—We are enjoying beautiful weather following the copious rains of ten days ago, allowing corn to harvest fall crops. Potato digging is well along and as to yield and quality there seems to be no boasting; considerable scab. Wheat Virginia, 6 acres. The wheat is looking fine and able pastures are getting brown they are being used on most farms. Winter cabbage up to average in yield but is in little demand at $1.50@2 per cwt.; potatoes are offered in small lots at $1@1.50; turnips, 75c@$1; tomatoes, $1@1.50; eggs, 40@45c; butter, at store, 40@42c, private trade, 50@60c; spring chickens, 22c; hay, delivered, $22. There seems to be but little more yet in deliveries of dressed pork.—D. H. W., Nov. 1.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .48	$ .47½	$ .49	$ .46¾
Eggs, fresh gathered extra firsts (N. Y.)	.50	.47½	.44	.50
Potatoes, 120-pound sack (Philadelphia)	2.25	2.40	2.62½	3.75
Steers, good to choice (Lancaster)	12.75	12.75	11.62½	9.37½
Hay, Number 2 timothy, baled (Phila.)	16.50	16.50	16.50	23.50
Wheat, No. 2 red winter (Philadelphia)	1.37	1.37	1.39	1.48
Oats, Number 2 white (Philadelphia)	.60½	.60½	.61¾	.57

Live Poultry Receipts Heavy

Review of the Week Ending November 5

POTATOES—Potato markets thruout the country were dull with moderate to liberal supplies and a limited demand. Shipments were lighter with the reduction mostly in the movement from Minnesota. Shipping point markets improved slightly toward the close of the week but terminal markets were dull. Farmers in many sections were holding their potatoes for higher prices. The total shipments for the 1927 season are close to 10,000 cars ahead of last season's record for the same period.

BUTTER—The butter markets were unsettled with most buyers lacking confidence and buying for immediate needs only. Prices in the eastern markets with the exception of Philadelphia remained unchanged thruout the week. Receipts of butter at the eastern markets were slightly larger than for the previous week.

EGGS—The New York egg market was about steady, altho prices showed a wide range due to the great variation in quality. Toward the close of the week the demand improved and prices were firm. Nearby white eggs were rather quiet. Receipts were somewhat heavier than the week previous and the market was sensitive to a daily increase in the supply. Pullet eggs sold fairly readily on account of their relatively low price.

POULTRY—Receipts of live poultry were heavy and the warm weather had a depressing effect on the demand. The market was generally unsatisfactory and considerable stock was carried over from day to day. Fowl were especially dull but chickens were in lighter supply and sold readily. Leghorn chickens and pullets were in good demand.

HAY—The hay markets were about steady with a fair demand for top grades. Receipts were liberal and accumulations were reported at several markets. Supplies of timothy were ample at most points with a limited demand. Hay prices during October showed an upward tendency but on October 15 the Department of Agriculture states that the farm price of loose hay was the lowest reported on this date since 1916.

GRAIN—The grain markets were generally steady and prices on cash grain were slightly higher on account of the more active demand. Offerings of corn were light and the market was steady with a good demand. Rye prices tended higher on account of improved export demand. Oats were firm.

LIVESTOCK—The Chicago hog market was unsettled. Beef steers were steady with the lower grades weak. Heifer prices were lower while stockers and feeders advanced. She stock and bulls were steady while prices of vealers fluctuated. At the close of the week fat lambs were 15@25c higher but feeding lambs declined 25c.

APPLES—The apple markets in New York and Philadelphia were rather quiet during the week. Many dealers claimed that the unfavorable weather had an effect on the demand. Prices for the best fruit held firm on both markets but poorer stock was generally lower and hard to sell. Receipts were generally lighter than the week previous and considerable stock was being placed in storage.

CHICAGO LIVESTOCK MARKET

Hogs—Top, $10.10 paid for good and choice 220@230-lb averages; few loads 210@260 lbs $10@10.10; several loads 40-head 180@200-lb averages, $9.35@9.50; bulk 130@170 lbs, $8@8.50; most pigs, 6 @8.25; bulk packing sows, $8.20@8.70; best lightweights, $8.75@9.

Cattle—Western and native grassers and stockers and feeders strong to 25c higher; bulk and bulls fully steady; vealers, $1@1.50 lower; best matured steers, $17.75; yearlings, $17.65; comparatively little above $17; steers now selling at $13.50 to $16; stockers and feeders, $9.25@10.75; heavy feeders up to $11.85; most grass cows, $8.50 downward.

Sheep—Sheep and feeding lambs, 25c lower. Week's top prices: Fat native lambs, $14.25; comeback westerns, $14.10; fed clipped lambs, $13.25; fat yearling wethers, $11; fat ewes, $6.75; range feeding lambs, 14.50.

WOOL MARKET

Boston, November 5, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 47c; ½-blood combing, 47c; ⅜-blood combing, 47@48c; ¼-blood combing, 48c. Michigan and New York fleeces—Delaine, unwashed, 45@46c; ½-blood combing, 45@46c; ⅜-blood combing, 45c; ¼-blood combing, 48c. Wisconsin, Missouri and average New England—¼-blood, 43@44c; ⅜-blood, 45@46c; ½-blood, 46c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, November 5, 1927.

Clover seed, cash, imported, $15.50; cash, domestic, $17.60; December, domestic, $17.70; December, imported, $16; February, domestic, $17.80; March, domestic, $17.75. Alsike, cash, $15.40; December, $15.50; January, $15.70; February, $15.90. Timothy seed, cash, $2.10 bid; December, $2.15 bid; March, $2.25.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia Jobbing trade to retail feed dealers on Monday, November 7, 1927. Quotations cover solid car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$ 36.00
Spring bran	35.00
Soft winter wheat bran	37.00
Hard winter wheat bran	36.00
Standard middlings	35.00
Soft winter wheat middlings	38.00
Flour middlings	41.50@41.00
Red dog flour	44.50@47.00
White hominy	39.00
Yellow hominy	37.00
Gluten feed	41.00
36 per cent cottonseed meal	44.70
41 per cent cottonseed meal	47.50
43 per cent cottonseed meal	50.50
34 per cent linseed meal	46.70

For Baltimore, Cumberland and Hampsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

County News and Comment

Fulton County, Pa.—Have had several light frosts but very little damage done. Corn is a much better crop than had been anticipated. Wheat is up and looking well. Clover seed is being threshed and is turning out well. Hogs are low, selling for 10c or less live weight. Dairy cows are scarce and high in price. Buckwheat yield was about 75 per cent of normal. Market quotations: eggs, 42c; butter, 35c; chickens, 20c; dressed pork, 16c; lard, 15c; wheat, $1.20.—T. H. T., Oct. 29.

Chester County, Pa.—During the past week many farmers completed the two jobs of sowing wheat and cutting corn. Practically all corn will mature with many bumper crops. Potatoes are rapidly being dug with many excellent yields. The county record now is over 600 bushels per acre. Owing to the open fall and abundant pasture milk is rather plentiful. Eggs, as usual, are high in price this season of the year. Cows are unusually high in price. Apples are rather scarce and bringing a very good price.—F. H., G, Oct. 31.

Clearfield County, Pa.—We are enjoying beautiful weather following the copious rains of ten days ago, allowing corn to harvest fall crops. Potato digging is well along and as to yield and quality there seems to be no boasting; considerable scab. Wheat Virginia, 6 acres. The wheat is looking fine and able pastures are getting brown they are being used on most farms. Winter cabbage up to average in yield but is in little demand at $1.50@2 per cwt.; potatoes are offered in small lots at $1@1.50; turnips, 75c@$1; tomatoes, $1@1.50; eggs, 40@45c; butter, at store, 40@42c, private trade, 50@60c; spring chickens, 22c; hay, delivered, $22. There seems to be but little more yet in deliveries of dressed pork.—D. H. W., Nov. 1.

Lebanon County, Pa.—The corn crop is one of the best in recent years. Potato crop was a good one in most cases, especially where regular spraying was done. Harvey Seltzer, of Palmyra, offered two of his farms for sale on Saturday, October 29th. The one of 125 acres was sold for $200.50 an acre, while the other one was bid up to $175 an acre, but was withdrawn. There is yet some wheat to be sown. The early-sown wheat is a good stand. Potatoes have an upward trend in price just now. Some are being held for a still higher price. Cattle is high in price. Good cows commanding as high as $175@200 per head. Prices: wheat, $1.25; corn, $1.20; hay, $17; potatoes, $1.25; apples, 75c basket; butter, 55c; eggs, 60c.—P. L. M., Nov. 1.

Lehigh County, (Upper) Pa.—We have just passed thru a very rainy period. Creeks and streams are flooded and roads are very muddy. Fortunately, potatoes have been dug and fields are nearly all sown. Most of corn is cut; will be a good crop. Frosts have done little damage to date. Farmers are busy hauling manure, cutting firewood, etc. Corn husking has not started but will soon begin after the ears have dried out. The potato market has not been very active. First the crop in general has been short and farmers are holding for higher prices. Cattle sales are plentiful and farmers are buying large numbers of cows and feeding cattle to consume last summer's enormous crop of hay. The apple crop is very short. Many farmers are buying apples for their own use. Cider presses and apple butter cookeries, which were running almost day and night last year, are running only a few days each week. Prices are high and seem to be going higher. Wheat, $1.20; corn, old, $1; oats, 65c; rye, 90c; butter, country, 44c; eggs, 48c; potatoes, $1.—G. J. R., Oct. 21.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

ONE day is not just as good as another when it comes to selling farm produce. Last Friday when I was going around the wholesale market it seemed as tho everything was dull and no one was doing much business. When I asked what was wrong the dealers would say: "Well, it is just a regular Friday market." After about two or three had told me the same story I made up my mind that I was going to find out what was wrong with Friday. I supposed it was some superstition, such as Friday being unlucky, but I found that there was a real reason why it was not such a good market day. In Philadelphia, as in most other large markets, there must be some systematic basis of credit. Here the buyers and dealers have a credit association and they have set Wednesday as the day when all bills must be settled. If a buyer does not pay all of his accounts he is blackmarked by the association and he must pay cash for all purchases until he again establishes his credit. All bills contracted up to Friday must be paid by the following Wednesday but Saturday's purchases carry a ten business days' credit. With this situation a man has to want something pretty badly to run up a bill on Friday for if he waited until the next day he would have ten business days and two Sundays before he would have to pay.

Then I thought I would find out which day the dealers considered the best market day and they practically all agreed on Thursday. In a city that is a distributing point for many suburbs and smaller cities within trucking distance, Thursday is the day when the out-of-town buyer does most of his shopping for the week-end. The city retailers are also stocking up for the Friday and Saturday business.

Monday is often a day when nearby produce is in rather light supply as the majority of farmers do not work on Sunday. The fruits and vegetables that arrive Monday morning are generally harvested on Saturday and there are not usually so large quantities as later in the week.

Tuesday is a fairly good day most of the year but if Monday has been slow there is often an accumulation of produce on Tuesday and prices are low. Wednesday is a rather good market day during the winter months but during the summer months practically all the chain grocery stores are closed all afternoon. This means that the chain store buyers are not operating on Wednesday morning and it is surprising the effect that this has on the market.

Produce merchants say that "Most anything can happen on Saturday." Generally speaking, it is a poor day to send a large quantity of very perishable produce to market.

The holidays are another point to watch. Altho they bring a demand for special products it seems that many growers forget that this demand occurs several days previous to the holiday.

When large industrial plants pay their men every other week business is likely to be pretty poor just before pay day.

The grower cannot control the prices at which his produce will sell when it reaches the market but he can to some extent control the day of his arrival.

Turkey Market Outlook is Good

By MARILLA ADAMS

ONCE again the turkey struts into the limelight. As the holiday season approaches, the farm wife who has worried thru the hazards of rain, cold, disease, scanty feed supplies, motorists with no regard for poultry in the road, and the well-known gypsy tendencies of the turkey to go roving off, frequently to forget its way home or to be gathered into another flock, takes stock of the turkeys which have survived the struggle and begins to figure what the return for her labor with them will be.

Early in the season it was believed that this year's turkey crop would exceed all previous records. The high prices which prevailed last Christmas when farmers were paid on the average of 32.8 cents a pound, the highest since 1920, induced many who had never been interested before to try their hand at raising turkeys. The demand for "seed stock" early in the year was the largest ever known in many sections. Young and healthy toms without pedigree in some instances sold for $10 and hen turkeys for $5 in Texas. So heavy was the demand for hen turkeys toward the close of last season that many cars of dressed turkeys moved to the East with only a scant showing of hen turkeys.

The stage seems set this spring for what promised to be the largest crop of turkeys ever raised. Undoubtedly, the hatch was in line with these expectations. But the hazards from poult to market are great, and this year a cold, wet spring increased the difficulty in getting young turkeys thru the tender stages, particularly for those who attempted to raise incubator-hatched poults. Furthermore, the inexperience of many producers was a tremendous handicap. There are records where hundreds of young turkeys were hatched out in Texas and only a fraction of them reached the point where they began rustling for themselves.

Estimates of the size of the turkey crop are at best only a matter of conjecture. The consensus of opinion now indicates that in spite of the larger hatch last spring, the crop to be marketed is not larger than a year ago. From Texas and Oklahoma, which supply the bulk of the Thanksgiving trade, up thru Kansas, Nebraska and into the Dakotas and Montana, come reports of "same as year ago" "or fewer turkeys than in 1926." In the Pacific northwestern states, a small increase is indicated. In the eastern states, such as Delaware and Maryland, the turkey crop is believed to be fully as large as a year ago. Pennsylvania reports some increase. In the South, Alabama, Tennessee and Kentucky shippers agree that the turkey crop is smaller than last year, while Mississippi reports production as "unchanged."

It is still too early to venture a guess as to the probable price at which turkeys will be sold this year. Prices never are determined before the first of November when the marketing season opens, and they frequently change as much as 10c to 15c a pound before the short season is over. Prices paid to producers during the past five years as reported to the United States Department of Agriculture are as follows:

	Oct	Nov.	Dec.	Jan.
	15	15	15	15
1922	25.1c	29.5c	32.3c	29.7c
1923	26.6	27.9	24.5	23.1
1924	23.3	24.2	25.8	26.2
1925	24.0	28.3	31.1	31.7
1926	26.6	29.8	32.8	31.6

Last year, the country prices paid to Texas farmers for No. 1 live turkeys started at 23 to 25 cents a pound. On November 15, the average for the entire state was 24.1 cents, or 2 cents a pound higher than a year previous. In Oklahoma, producers received an average of 26.8 cents a pound on the same date. In the central states, where a smaller proportion of the crop is ready for the Thanksgiving trade, the price averaged 29.2 cents and in the western and mountain states, 35.5 cents. A month later, farm prices had advanced from 10 to 25 per cent.

During the last three years, prices paid to farmers for their turkeys have averaged higher in December than in November. Foreign turkeys will not be a serious menace to domestic prices this fall and winter.

Altho the crop got a late start in most sections, the cool weather lately has been favorable for the growth of turkeys and the birds generally are believed to be further advanced than usual at this time. A plentiful supply of small grain also will help put the birds in fine condition and the weight per head is expected to average higher than last season.

Announce Hort Week

HORTICULTURAL Week at Pennsylvania State College, which is designed for the commercial growers of fruit, vegetables, flowers and ornamentals, is scheduled to take place November 28, 29 and 30. A complete program and other desired information may be secured from the Department of Horticulture at the college.

Rambles of a Pennsylvania Fruit Grower

(Continued from page 9)

the best growers get over six hundred bushels.

The individual holdings average around fifty acres. A large proportion of the growers are retired merchants who have brought business ability to the industry. There has been no cooperative selling since the ill-starred Oregon Fruit Growers ended its brief existence. The fruit is sold to local dealers, or consigned. Recent statistics show that the dollar of the consumer of Rogue River pears is split as follows:

Freight and express	$.47
Grower	.26
Packing	.195
Sales expense	.075

My impression of the Rogue River pear industry was altogether to the credit of the growers. They have a hard fight on their hands against blight, frost, codling moth, spray residue and other problems and the best growers are winning. They can produce a dessert pear of exceptionally high quality—would it be safe to say higher than California? One cannot help but wonder, however, if pear planting on the Pacific Coast has not gone beyond the reasonable requirements of the market. Altho there has been a reduction of twenty-six per cent in the number of pear trees in the United States since 1919, commercial production has doubled in that time. California has 77,000 acres, Oregon 12,000 acres, Washington 15,000 acres. Will the sad history of over-production in apples be repeated in the pear? Can the American public be educated to use winter pears more freely? Thereon hangs the fate of our valiant pomological brethren in Rogue River.—S. W. Fletcher.

ANOTHER $2200.00 Claim Paid

Don't neglect to renew your Travel-Accident Insurance Policy. Each consecutive full year's renewal of your policy adds 10 per cent to the specific losses (except the weekly indemnity) until such accumulation reaches 50 per cent at the end of the fifth year.

$2200.00 Instead of $2000.00

A check for $2200.00 was recently sent to Wm. H. Wilson, R. 4, Bedford, Pa., whose son, Francis Wilson, met with a fatal automobile accident shortly after renewing his policy.

This Travel-Accident Insurance policy, issued by the Federal Life Insurance Company, is offered to readers of Pennsylvania Farmer for only $1.00 per year for each policy.

Write for full particulars or fill out application blank below and forward to us together with $1.00. No one who drives an auto can afford to be without this policy.

PENNSYLVANIA FARMER
261 So. 3rd St., Philadelphia, Pa.

Here is what it is worth to you

$5,000.00 For loss of life by wrecking of railroad passenger car, street, elevated or subway car as specified in policy.

$2,000.00 For loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxi-cab or passenger elevator as specified in policy.

$1,000.00 For loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclone, tornado, as specified in policy.

$10.00 Weekly for fifteen weeks for injuries sustained in the above manner as specified in policy.

Staff Contributor and Adviser

Is Corn and Cob Meal a Good Grain Feed for Swine?

Is corn and cob meal a good feed for swine?—N. A. S., Ohio.

Corn and cob meal is not considered a good grain feed for swine due to the fact that the cob contains a large amount of undigestible crude fiber. The digestive apparatus of swine is not able to utilize to advantage this amount of undigestible material. Bulk is desirable for brood sows, but it should be supplied by pasture during the summer and by allowing free access to clover or alfalfa hay during the winter months. The cost of grinding the corn can be saved by feeding the brood sows ear corn and skimmilk supplemented with the pasture or legume hay. The sows, if in thin condition, should be fed enough grain to keep them in good, thrifty condition and so that they will gain from 75 to 100 pounds during the gestation period. This will require one to one and a quarter pounds of ear corn daily per 100 pound of live weight. In addition feed them as much legume hay as they will consume and from 4 to 6 pounds of skimmilk per head daily. The sows should have plenty of exercise at all times.

Give Young Pigs the Preference

The corn and cob meal is not a good feed for young pigs. A combination consisting of 4 parts of corn meal and 3 parts of wheat middlings is a much better combination to start the pigs on. They should be allowed about three pounds of skimmilk for each pound of grain consumed. If the skimmilk is not fed to the little pigs add 1 part of high-grade digester tankage or fish meal to the corn meal and middling ration. The skimmilk is excellent feed for the young pigs and should be fed to them in preference to the mature sows. After the pigs reach a weight of about 100 to 125 pounds the middlings can be gradually eliminated.—W. H. T.

Ensilage Too Bulky Feed for Pigs

Is ensilage good feed for pigs and if so, how much do you recommend to feed per day a head?—A. J. B., Crawford County, Pa.

Corn silage is not regarded as a desirable feed for pigs due to the fact that it is too bulky. The digestive system of the pig cannot handle to the same advantage bulky feed as sheep and cattle. The pigs would not be able to consume enough silage to make satisfactory gains. When concentrates are fed in sufficient quantity there is no objection to letting the pigs have access to a small amount of silage as a succulent feed. —W. H. T.

Has Six Chestnut Trees Immune from Blight

I NOTICED in an editorial of a recent issue of your paper a request for information as to the condition of chestnut trees in different sections of the state.

In our locality in Lancaster County the blight seems to be as deadly as ever to the native chestnut. There is a timber tract within one-quarter mile of my farm that contained about half chestnut timber, which the blight killed. I have noticed young trees starting around the stumps and they rarely reach the age of more than two or three years until the blight kills them.

Grows Disease-free Stock

However, it might be of interest to the editor, as well as the readers of Pennsylvania Farmer, that I have six large chestnut trees on my farm that are immune from the blight and every year they yield bushels of the finest nuts. I am raising some young trees from the nuts and while the trees of my first planting are four years old, not any of the young stock shows any signs of blight.

The U. S. Department of Agriculture has sent men to my farm to investigate and they pronounce them the finest trees they have discovered. They have got scions and nuts from my trees to use on the government experimental ground in Maryland. The Department of Agriculture believes that the native chestnut can be replaced from such trees as I have on my farm.—Charles V. Stern.

Since writing the editorial inquiry concerning chestnut trees we have had information from several sources showing that some of the new growth gives evidence of being immune to the blight. We hope that enough such stock will be discovered to bring back this valuable and beautiful forest tree.—Editors.

APPROXIMATELY 15,000 Pennsylvania farmers have become members of cooperative buying or selling associations during the past six years, says the Bureau of Markets of the Department of Agriculture at Harrisburg.

They Tipped the Scales for a Ton Litter

THIS ton litter was fed by R. P. Maule, Lancaster County, Pa. There were ten purebred Berkshire pigs farrowed March 22 and all of them were raised. They were kept on the sow until ten weeks old.

These pigs were never on pasture but had a small lot 40 by 40 feet besides the feeding pen 10 by 12 feet. Three times daily they were fed on a ration made up of 400 pounds of ground corn, 300 of middlings, 200 of ground oats and 100 of tankage. During the 180 days they consumed 6163 pounds of this feed in the form of a thick slop. In the spring they were fed green alfalfa once a day. Later in the summer they were given green corn and for the last two or three weeks green ear corn.

At the end of the 180 days, September 19, they tipped the scales at 2194 pounds.—R. P. M.

CLEAN OFF A BOG SPAVIN

Or thoroughpin promptly with Absorbine. It is penetrating but does not blister nor remove the hair. You can work the horse at the same time. $2.50 at druggists, or postpaid. Describe your case for special instructions. Write for valuable horse book 4-S free.

A user writes: "Had one horse with bog spavin on both hind legs. One bottle Absorbine cleaned them off. Horse now going sound and well."

ABSORBINE

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

HORSE HAS COUGH.—I have a valuable horse twelve or fourteen years old which contracted a bad cough several months ago. I feed him on ear corn and good hay. He is in good working condition.—I. C., Mechanicsburg, Pa. The cough you describe may be an indication of heaves. In such a case there should be some additional symptoms such as labored breathing, with a noticeable movement of the flank. In the early stages of heaves one may notice only the cough. Relief may be secured by feeding sparingly of hay and moistening all that is fed. The grain ration may be increased to make up for the decreased amount of hay fed. The use of a small amount of molasses on the grain may be of value. There can be little value, however, in any sort of treatment unless one can find the cause. By this is meant the localization of the trouble; whether throat, nasal passage or lungs. Have your veterinarian make an examination of the case in question.

COW HAS TROUBLE WITH STIFLE.—I have a Jersey cow whose stifle joint is out. We can put it back but cannot keep it in place. Can you suggest some way of keeping it in place? The cow is down but feels good every way. She is heavy with calf and will be fresh in about six weeks from now.—R. W. H., Morris, Pa. Treatment of such a case is of doubtful value under the conditions mentioned. Provide the cow with plenty of bedding, turn her over at least twice daily. This should be done by putting the feet of the cow close to the body and rolling her over. The method is better than rolling the cow over on her back. Secure a mild blister from your veterinarian and apply it as directed over the area of the stifle. Allow access to a mixture of one part salt and four parts steamed bone meal. A tablespoonful of cod liver oil night and morning may prove of value. See that the diet is laxative, using roots, bran or oil meal. Avoid feeding very heavily until the cow is able to stand or until calving. It is possible that this cow will be all right after calving, but will require a great deal of care in the meantime.

Born Magnate

"So you figure my boy will be a big executive some day?"

"Yes, it always takes him so long to eat his lunch."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 5 cents a word each for one, two or three consecutive weekly insertions. 3 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line).

Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry Breeding Stock, Eggs, etc.) not accepted at word rate. Send for special folder.

Kow-Kare Conditions Cows for Freshening

It is well-known that most cow disorders have their origin in breeding troubles. The terrific strain of producing a healthy calf and coming through the freshening period calls for more than good food and comfortable quarters.

Let Kow-Kare be your aid when cows freshen. No investment is so certain to pay big returns. Instead of **expecting** trouble, you **prevent** it—effectually and at slight cost. Kow-Kare invigorates the genital organs—makes them function as nature intended. Feed Kow-Kare two or three weeks before and after calving—a tablespoonful with the feed, and say good-bye to worries with freshening cows.

Treating Cow Disorders

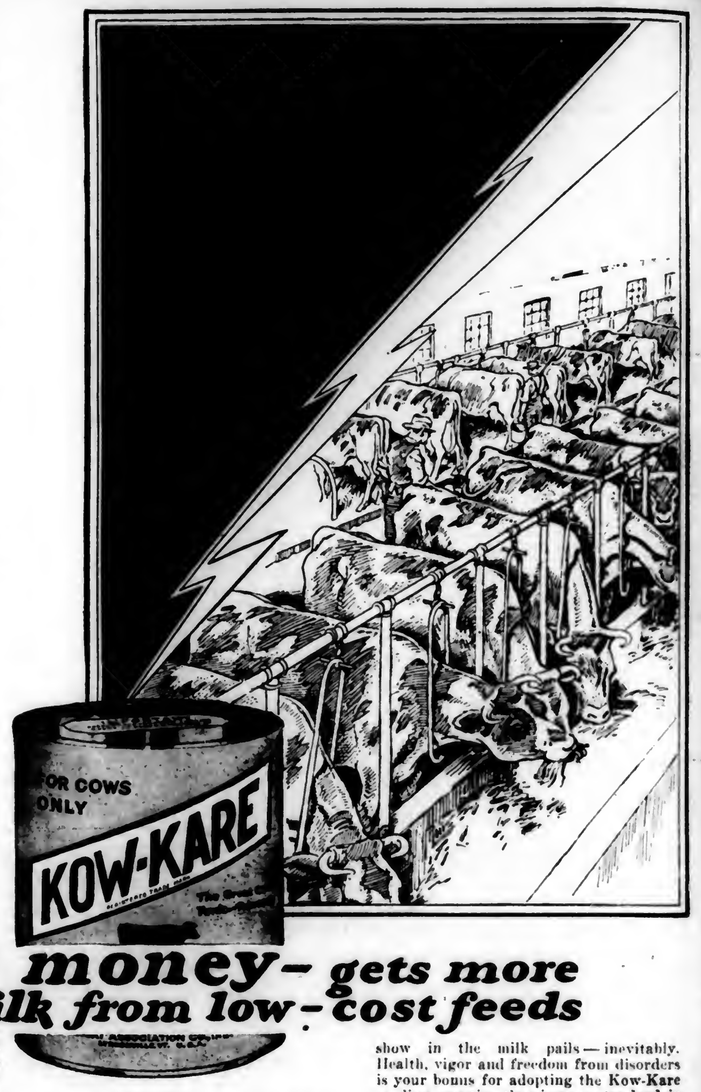
For all cow ailments arising from weak digestive and genital organs—Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Lost Appetite, etc., Kow-Kare is a reliable home remedy. Full directions on each can.

For Healthy Udders

—use BAG BALM, the wonderful healing ointment. A great healer of the delicate tissues of udder and teats. Big 10-ounce can of this famous healer, only 60c.

Home-Mix Your Own Complete Mineral

With Kow-Kare you can easily mix your own complete mineral at a surprisingly low cost—a mixture of recognized conditioning value. Simply mix 30 lbs. salt, 30 lbs. fine-ground lime, 30 lbs. steamed bone meal and four cans (large) Kow-Kare. For well under $6 per hundred you will have an unbeatable mineral. Use 80 lbs. of this mixture to a ton of grain.



Saves money—gets more milk from low-cost feeds

COWS on winter feed need a different type of care and handling than cows in pasture. Succulent, green feeds are turned into milk with a minimum strain and effort of the milk-making and digestive functions. The outdoor life induces health and vigor.

Barn-feeding conditions are a different story. The diet is heavier, richer, harder to digest. Fresh air and exercise are largely lacking—but the milk-yield must keep up. A slump means profits wiped out. The cow must be **forced** or the milk check disappoints.

Secret of Heavy Winter Yields

During the long winter months when your cows are subjected to this unnatural strain of modern dairying—you can gear up the whole herd to new heights of production by the simple addition of small quantities of Kow-Kare to their low-cost feeds. This great product is a concentrated **regulator** of the digestion and assimilation of milk cows. It replaces the wear and tear on the over-worked organs of production.

Kow-Kare makes a reasonable forcing process safe and effective—helps the cow to get all the milk value from Nature's foods with safety to her health and vigor. No need to pay out all your income for rich and expensive concentrates which, at best, have only temporary effect on production.

Give Kow-Kare a real test this winter on the whole herd. For a few cents a month per cow you will reap a surprising milk crop from natural low-priced feeds. A tablespoonful of Kow-Kare with the feed one to two weeks in each month is all the average cow needs. The benefits show in the milk pails—inevitably. Health, vigor and freedom from disorders is your bonus for adopting the Kow-Kare feeding practice that is now standard in thousands of money-making dairies.

Thirty Years of Success

For over thirty years Kow-Kare has been helping dairymen to make more money from their herds—both as an aid to greater yield, and in the prevention and cure of cow disorders. Get your supply from your feed dealer, general store or druggists. Large size $1.25; six cans for $6.25. Small size 65c. If your dealer is not supplied, we will mail direct, postpaid.

You Need *Never* Change Your Oil if You Own a Buick

Last year Buick said: "Change your oil only four times a year."

Buick tests at the great Proving Ground of General Motors at that time had shown that oil changes would *never* be necessary, with the Oil Filter to remove impurities, and with the Crankcase Ventilator, Thermostatic Circulation Control and Automatic Heat Control to prevent oil dilution.

Now more than a year has passed, and Buick owners in every section of the world—under every climatic condition—have also proved that you never need change your oil if you own a Buick—just add enough to maintain the proper level.

The trouble and expense of frequent oil changes are now things of the past with Buick owners—replenishment and inspection of the Buick Oil Filter only are required.

This is but another of Buick's many contributions to the economy and efficiency of motor car operation . . . another instance of Buick's progressiveness . . . another indication of Buick's greater value.

Japanese Beetle Work Divided into Two Branches

THE U. S. Department of Agriculture has divided the activities of the Japanese Beetle Laboratory, Riverton, New Jersey, into two distinct units.

The research department for the control of the Japanese beetle, and all investigational activities carried out by the Bureau, has been separated from the quarantine division and moved to Moorestown. This move separates the activities of the Japanese beetle control work into a division exclusively for research work and another for the control and inspection of farm crops, nursery stock and other commodities that may come under the quarantine regulations.

The research department has taken permanent quarters in the two-and-a-half story concrete and steel office building on the outskirts of Moorestown which was formerly built and occupied by the Stokes Seed Company, of Philadelphia.

New Lines Investigated

Nearly twelve acres of land is included with the office and laboratory building where all future control work on the Japanese beetle will be conducted. In addition to carrying out investigational work on the Japanese beetle, the laboratory is taking up an intensive study and investigation on sprays for trees and farm crops along lines never before touched. According to Loren B. Smith, acting entomologist in charge of the research division, the moving of the beetle laboratory and its many activities to Moorestown gives adequate space for expansion of the insect and spray control work that is being planned for this laboratory. It is understood that the Japanese Beetle Laboratory will be made a permanent institution, serving certain activities of the U. S. Department of Agriculture as a form of a Sub-Experiment Station. Among the new fields of investigational work that the Department of Agriculture is placing on the Moorestown Laboratory is the development of a completely new line of non-poisonous repellents for fruits and vegetable crops.

Present Program Will Continue

All the present work on the beetle will be carried out as in the past except on a much larger scale. The work with the parasites will be pushed to the limit of the facilities available. Spraying work will be enlarged to include many developments as well as further investigations on lines followed during 1925-26 and '27. The recently established Bureau of the State Department of Agriculture for the Suppression of the Japanese Beetle will also be located at Moorestown.

The quarantine division has taken over the entire headquarters at Riverton formerly occupied by the research department and all certification work and inspection will be conducted as heretofore at the old address. No change is contemplated at this time for this work which will continue under the direction of H. M. Stockwell, Riverton, while Loren B. Smith will be entomologist in charge of the research department.—A. K.

Banks Display Interest in Hort Show

A NOVEL feature of the New Jersey Horticultural Society's annual fruit and vegetable show at Atlantic City is the interest being shown by local banks, business houses and individuals in the prizes offered for the best packs of fruit exhibited at the show.

These business men hope to create better packing methods in their counties by offering these prizes. Banks in many counties are putting up the money for the prizes which must be won by some grower of the county. Atlantic, Burlington, Cumberland, Gloucester and Monmouth Counties are offering prizes this year in these local communities.—A. K.

All of Us Do Not Know These Facts

We Should Understand the Principles by Which Life Insurance Companies Operate

By STEWART ANDERSON

THE farmer should be a larger user of insurance, because any one of the hazards under which he lives and works may destroy his chances of earning and accumulating enough to care for his family properly, and for his own old age.

Every farmer knows the need of fire, and wind, and hail, and accident insurance. He dreads these disasters, and so he takes insurance to replace the loss which they would cause. For the same reason the farmer should carry sufficient life insurance.

None of the disasters may strike his property, but some day he will cease from his labors. The farm will remain, and usually it is his family's sole source of support. Very often it is burdened by a mortgage indebtedness, or by installments due on machinery or other things. While he is living, and his brains and labor manage the farm, the burden is bearable and the family's living is secure. But when he has gone, and wife and children must take up his work, they may quickly, through lack of skill or strength or cash or credit, lose their home. Life insurance casts out the danger; and tides the family over until it is able to meet the new conditions of their lives,—until the boys have become older, and the girls are able to earn, or, if there are no children, then life insurance money enables the wife to hire competent help, and to meet installment payments on mortgage and machinery.

Is an Investment, Not an Expense

Life insurance immediately brings into the family a sum of money that saves the home and farm, and keeps the business—for farming is a business—going. But that is only one use for life insurance—a vitally important one, of course.

Remember this, that when you pay premiums on any other kind of insurance, usually it is purely an expense. If house or farm burns, or is destroyed by a cyclone, then your damage is covered, but if these things do not happen, no dollar comes back to you; and the same is true of hail insurance and your crops. Life insurance is different.

The money that you pay to the company is very much like a deposit in a savings bank—it is savings and not expense.

Every life must end, and therefore under every policy, if it is kept up, there must be a payment; and, of course, there are forms of life insurance that are paid to the insured himself, instead of at his death. And because life insurance is a savings, you are able to draw against it in times of emergency or of opportunity. You can't do this with any other kind of insurance.

Rapid Deportation

Life insurance is protection and savings or investment, all done at the same time.

Life insurance is an old institution. There are traces of it in Roman days. But it was in the Middle Ages, and in still later centuries, when it had its real start. Its real history in America began between 1840 and 1850, when three or four of the present great companies had their beginnings. And it is in America that life insurance has so mightily flourished. There are more policies in force in the United States, and for a larger total, than in all other countries of the world put together. On January 1, 1927, American companies had policies for eighty billion dollars outstanding, issued on more than fifty millions of Americans. This does not include insurance issued by fraternal and assessment organizations, but is "old line," legal reserve, scientific insurance.

All Companies Supervised by State

American companies are of three kinds: Purely mutual companies, stock companies and mixed companies,—that is, partly stock and partly mutual. Perhaps more than three-quarters of all of this eighty billions of life insurance is on the mutual plan, all of the great old companies, with one or two exceptions, being mutual companies. In life insurance there is no argument as to whether a mutual company is stronger than a stock company, or a stock company than a mutual company. All of them are as safe as the government, and all of them are supervised by state insurance departments. In practically every state there is an insurance department, and if a farmer wants to be assured whether or not a company is all right, all he needs to do is to send a letter to the Commissioner of Insurance of his state.

Perhaps you have heard somebody say that "life insurance is all a gamble." That statement is false. What is true is that no man knows when his turn to go will come, and so he doesn't know how many years he will live to make his premium deposits to the company. Life insurance knows, however, that out of a given number of men to whom policies are issued this year, a certain number will die next year, and the next, and every year. And because this is known the companies are able to figure out just how (to page 17)

Boy Trappers Prepare for a Busy Season

By I. H. MOTES

THE farm boy trapper who lives close to his trapping ground has an advantage over the trapper from a distance. He learns where the skunks have bred in the early summer, and where the water remained during the dry weather, with a view towards some rat trapping in the early winter and early spring. (For many marshy sections may not necessarily be good for muskrat trapping because the marshes, ponds or streams may be in the habit of going dry for two or three months in summer.) He learns where the fox dens are, and knows that the young foxes will likely remain near the old home during the first winter after their birth.

Success Comes from Year-Round Attention

The expert farm land trapper should spend some time in the autumn in going over his ground. Den trees for coons should be gone over carefully, to see which ones have fresh scratches upon them. Bait should be put out early, to get fur bearers to frequenting certain likely spots. Only the one who keeps in close touch with fur bearers throughout the entire year can expect to make a success of any kind of trapping.

Generally, where you find muskrats you will also find mink.

Muskrats invariably use around tree roots in the edges of water. Wherever you find small rivulets or ditches emptying into a creek where the water is very shallow, and the banks very long and gently sloping and overgrown with water grass and lilies, there you will find many tracks of muskrats, mink and raccoons, but especially along the banks of the larger streams where there are long stretches of quiet waters which offer conditions most favorable for the habitat of these animals. Here is an almost ideal place to set muskrat traps, especially if you find many cuttings and a number of slides and trails, with every now and then a bank den. On the other hand, if creek banks are high and overgrown with grass, briars and thickets, with some tall, large timber, affording good denning places for skunks, raccoons and opossums, there you should find these animals in fair abundance.

About the time the ice begins to break up in the spring in northern states the muskrats are in their prime, whether it be February 15, March 1 or March 15, according to latitude. Muskrats are perhaps prime later in the spring than any other animal in the same latitude, the reason being that they stay in the cold water so much, and the water stays cold after the air begins to grow balmy. When the rats begin to show black spots on their heads, trapping of them should cease.

Musk is perhaps the only scent that has much attraction for muskrats, especially in the spring. The musk glands lie under the base of the tail, and are removed by cutting around them. Split with a knife and the musk will be found—a yellowish, oily substance, much more abundant and much stronger in the spring than in the autumn and winter. Muskrat musk is also good fox and mink bait, especially if you mix it with fish oil. Remove a few musk sacs from the muskrats and you will have all you will need for several years.

Anticipate Most Profit from Muskrats

Muskrats feed along likely stream-sides and lake and pond banks a considerable distance from their homes, so that there may be some dandy muskrat trapping ground near your home, although you never see any of their dens or slides in your vicinity.

More money will doubtless be made on muskrat pelts this autumn and winter than upon any other one species of fur taken in North America, because these little animals multiply so rapidly, and are therefore so numerous and so widely distributed over the United States and Canada.

Comments on the Week's News

AND now it is mountainous New England that has suffered from disastrous floods. Scarcely had the news of loss and suffering along the Mississippi subsided when the country was horrified by news of great loss of life and property by floods in Vermont and Massachusetts. At this writing the total loss of life is not known, nor has there been any attempt to estimate the property damage. To add to the suffering, cold weather dropped suddenly onto the stricken area. The work being done here again proves the value of that great organization,—the Red Cross. Pay your annual dues now!

✦ ✦ ✦

After Judge Bonniwell, in one of the criminal courts of Philadelphia, had heard thirteen liquor cases in one day, and had seen the juries return "Not guilty" verdicts in ten of them and disagree on two others, he promptly "fired," without pay, all the panel except the twelve men that had brought in a verdict of guilty in one case. Judge Bonniwell is not noted for his "dry" sentiments, hence it is all the more encouraging to those who believe in the integrity of the courts to see a judge give a merited rebuke to men who evidently fail to take their oaths seriously.

✦ ✦ ✦

Without doubt, several "farm relief" bills will be presented to Congress when it meets in December. Already a half-dozen or so have been heard of. Practically all of them will deal with the control and disposal of surpluses, mostly of corn, wheat, meat and cotton. If anything is done, of course, there must be compromises, but no one can tell what will be decided upon. There is a firm belief in many minds that the continuous discussion of this subject is doing more injury to agriculture than any likely legislation will help. It is felt that farm credits, land values, farm morale and individual initiative are all being lowered by the emphasis which is being laid on the "farm problem."

Is athletics in schools and colleges taking too much of the time and interest of the students? If one were to judge solely by the side talk, the newspaper publicity and the school papers, one might reasonably conclude that the chief purpose of an institution of learning was to maintain the best athletic teams. We examined a prep school paper the other day and found that sixty per cent of the "school news" was the reports of games and team contests. "Enough's enough, and too much is plenty."

✦ ✦ ✦

New York City is one place which takes "Apple Week" seriously. Mayor Walker and his wife gave a luncheon to the teachers and pupils of one of the schools, the news of which got into every paper. Some of the theaters turned their lobbies over to the apple committees, and railroads made big displays in prominent places. In fact, the whole city did its best to add to the popularity of the apple. Unfortunately, Philadelphians were being entertained by the throwing of verbal rotten eggs back and forth by the politicians and Apple Week passed without serious notice.

The Dean of Farm Editors Passes

WE ARE sure that we shall excite no jealousy when we say that in the death of H. W. Collingwood this country lost its best-known and most-loved farm paper editor. For forty years the farmers of this country have read with pleasure and profit the writings of this able and loyal friend of agriculture. His wit, his homely philosophy and his peculiar literary style were of such a character as to tie his readers to him, and many thousands of people read the Rural New Yorker because of their faith and confidence in its editor.

It is not necessary to try in a few words to analyze the character and work of Henry W. Collingwood. Those who have followed his writings for years feel that they know him intimately; those who have not read after him could not make his acquaintance thru the pen of another. He had the mind of a scholar, the bearing of a gentleman, and the fairness of a good sportsman. No man has done more to improve the home and family life of rural people. His personality was evident in everything he wrote. Thousands of people almost feel that they have been frequent visitors to that pleasant, old fashioned home at Hope Farm. Our sincere sympathy is extended to the remaining members of the Rural New Yorker family in the passing of its most noted and influential member.

Corn Borer Control Work

THE final check-up on the results of the corn borer control work of last spring indicates that the work was well worth while. Those who were inclined to look for a complete eradication of the pest had little knowledge of the nature of such work. The fact that the increase over 1926 damage was as low as it was is no doubt due to the clean-up campaign. Without doubt, if nothing had been done, the spread would have been many times greater. The campaign, even tho the cost seems high, was time and money well spent in showing the farmers in the affected districts how to fight the pest. Of course, real success depends upon continuing the warfare every year.

But it must be recognized that the corn borer is here to stay. Every reputable entomologist is advising farmers to expect as much. The pest adds one more enemy to the list of the pests which must be considered in planning crop rotations, in outlining farm work and insect control measures. Fruit growers are no longer the most troubled class of agriculturists. General farmers as well must learn to control the increasing number of pests and diseases which threaten the grain crops.

Do You Fill Out Crop Reports?

THE editor of a country paper, who is also the postmaster in his town, wants to know whether or not farmers generally fill out the crop report blanks distributed by the rural carriers. His observation is that the majority do not. He finds that farmers believe that such reports tend to hurt the markets by making public the crop conditions and prospects.

While Pennsylvania Farmer has always objected to the Department's practice of estimating the probable yields at the beginning of the season, we do think it is in the interest of all to know something about the nation's acreage, the general condition thru the growing season, the influences which are favorable and unfavorable, and finally at the end of the season an intelligent estimate of the total yield. We believe farmers would be serving their own interests if they would all fill out the blanks, leaving out of consideration only the call for a guess upon yields until actual figures are available.

The truth of the matter is, the government figures tend to check false information spread for selfish reasons by other people. Crops cannot be hid. Anyone passing thru the country and observing conditions may make "guesses," and they do do it. Many firms have crop reporting systems for their own purposes, and these purposes are not primarily in the interest of farmers. By all means, fill out the crop report blanks and thus help to check the spread of false and selfish estimates.

The Educated Person

SIX tests of an educated person are, according to Dr. Nicholas Murray Butler, president of Columbia University:

Correctness and precision in the use of the mother tongue;

Refined and gentle manners which are the expression of fixed habits of thought and conduct;

Sound standards of feeling and appreciation;

Power of reflection;

Power of growth;

The ability to do efficiently, without nervous agitation.

Editorial Sidelights

RETURNING to Philadelphia from Erie last week, we encountered snow,—four or five inches. Most of it was in Elk County, which we visited on a side excursion from our main route, the Lakes-to-Sea Highway. We found mud too, lots of it, when we got off the main highways. We were surprisingly successful in our efforts to navigate the slippery roads, until we reached Clearfield County.

Overconfidence resulting from the fact that we had won every mud battle that far proved our undoing on a side road near Clearfield. The high crown and deep side ditches, with no ruts to keep the car from skidding sideways should have been warning enough. But they weren't. We kept in the middle of the road for about a half mile after we left the concrete and then slipped off into the ditch.

Clean fence rows and neat wire fences are an asset to any farm, but when we found ourselves in the ditch beside such a fence we fervently wished for a nice stony fence row with a few old fence rails lying around.

There wasn't a good sized stick or stone in the whole neighborhood. There was, however, a very considerate Mr. Gearhart. Thanks to him and his fine gray team we got back onto the concrete and soon caught up with our schedule.

CUT NUISANCE TAXES

Opinions Differ Regarding Rates—Give Little Thought to Local Problems—Too Many Rural Banks.

Washington, D. C.

TAX reduction hearings before the House Ways and Means Committee have disclosed a strong sentiment in favor of the removal of the automobile sales tax and other so-called nuisance taxes, equally powerful opposition to the abolition of the inheritance tax, and a wide difference of opinion as regards the proposed cuts in corporation taxes. The sentiment of members of the committee appears to be almost unanimous against elimination of the inheritance tax.

Should Consider Local Problems

Senator Smoot says he feels that the people give too little attention to their local and state tax problems, as compared with their interest in federal tax reduction. He wonders if the hundreds of thousands of letters, telegrams, petitions and suggestions which find their way to the Senate Finance Committee during the consideration of a revenue bill are duplicated in the files of state officials and legislatures.

President Studies Relief

Information comes from the White House that President Coolidge is making a careful study of the various legislative schemes that have been proposed for the relief of agriculture. It is definitely known that the President will insist that Congressional action be taken to meet the agricultural problem, although he is not willing to accept the McNary-Haugen equalization fee scheme.

Consider Flood Control

Hearings on flood control legislation are in progress before the House Committee on Flood Control. Many interests are represented and close to 20 different plans are before the committee for consideration. The flood disaster in New England has widened the interest in the matter. It is evident that strong pressure will be brought to bear to obtain flood control legislation that will meet the needs of all parts of the country.

Commission Criticized

The United States Tariff Commission has been severely criticized because of the length of time it has taken to make the necessary investigations of costs of production in the United States and in competing foreign countries.

E. B. Brossard, a member of the commission, says that one remedy for the situation is larger appropriations so that the staff of experts may be enlarged to meet the growing demands made upon it. With a larger staff naturally the time required to complete investigations could be reduced and more investigations could be undertaken with the expectation of being completed within a reasonable time.

Fight Loan Board Appointees

The fight to prevent the Senate confirmation of Messrs. Meyer, Cooksey and Harrison as members of the Federal Farm Loan Board promises to be a warm one.

Would Reduce Banks

An important step toward improving the economic condition of agriculture would be legislation that will cut down the number of rural banks, says Secretary of Agriculture Jardine. It is not unusual to find small towns that have three or four banks where one or two would suffice.

Onion Statistics Given Out

Farmers who are asking for an increase in the tariff on onions no doubt will be interested in figures just given out by the Department of Agriculture which show that in 1926 imports of onions into this country amounted to 1,841,600 bushels, valued at $1,937,364, showing an average import value of $1.05 per bushel. Exports of onions in 1926 amounted to 615,994 bushels, valued at $833,376, representing an average export value of $1.35 a bushel.

Would Exclude Alien Criminals

That any far-reaching plan to combat crime in the United States would fail to achieve its fullest possibilities if it neglected the matter of crime among aliens, was the opinion given at the conference on prevention of crime. After presenting figures showing that crimes committed by aliens were far out of proportion to the number of foreign born in this country, Representative Johnson, of the Committee on Immigration, advocated the deportation of alien criminals and their rigid exclusion from the United States.—E. R.

BEARS SUPPLANT DEER

Claims for Damage by Bears Out-number Complaints about Deer—Farm Products Show List Ready.

Harrisburg, Pa

FOR the time being marauding bears are occupying the attention of officials of the State Department of Agriculture handling claims for damages due to animals. A number of statements indicating havoc among hives and about farms by bears have come to the State Capitol and in some instances have been so clear that damages have been paid. Few complaints about deer have come in lately.

Rabbits Again

Stories that rabbits are afflicted with fevers and other diseases in Pennsylvania are being run down by agents of the State Game Commission and have been found to be without substance. In some isolated cases sickly rabbits were found, but nothing like a general ailment was discovered.

Plant More Roadside Trees

Arrangements are being made by the road and forestry authorities for systematic planting of trees along state highways in several sections of Pennsylvania. The state will furnish the trees and the Highway Department will plant and care for them.

Study Squirrels Widely

The study of squirrels under way by state agents is not being confined to any one section notwithstanding reports to the contrary, but is being worked on a wide scale. The several varieties of squirrels are being studied as to developments, food supply and spread. This is the first complete research of squirrels to be undertaken in this state.

Premium List Out

The State Farm Products Show Committee has issued the first copies of the premium list for the January exhibition and in addition to the plan for distribution from the Capitol on request they will be sent to counties for handling through the extension offices. The list notes several new classifications and numerous cash prizes as well as the cups and other trophies.

Make Record on Guard Rails

According to reports heard at the State Highway Department the state has erected more guard rails this year than in any similar season. Miles have been put up along some of the main highways as well as in mountain regions. Road building will end for the year with something like 700 miles of road built, including concrete, resurfacing, etc.

Fire Loss Down

State forestry authorities say the snows will make certain an unusually small fire loss this fall. The number of fires covering more than a few acres has been exceptionally small and snows end the rest of the menace. State authorities are complimenting hunters for the care shown in the woods.

Urge Better Care of Bees

A forthcoming state report will call attention to the discovery that many bees are illegally housed. Inspection work has been carried on extensively with the result that many colonies have been found so badly cared for that treatment for disease has been retarded.—T. C.

ANNUAL SHOW HELD

Mercer County Exhibition Represented Entire Poultry Industry—Draft Plan for Tax Fight.

Trenton, N. J.

THE annual meeting and show of the Mercer County Poultry Association held in conjunction with the meeting of the Board of Agriculture at Hightstown, November 15 and 16, was viewed as one of the largest central New Jersey poultry exhibits of the season. The show consisted of both utility and exhibition classes as well as classes for eggs and dressed poultry. The program was representative of the poultry industry as a whole.

To Shape Tax Legislation

The farmers' state tax committee, composed of Dr. Frank App, former American Farm Bureau Federation executive committeeman; Senator David H. Agans, Master of the State Grange, and H. E. Taylor, secretary of the New Jersey Federation, arranged to meet at Trenton in mid-November to draft the plan of the tax fight which they propose to carry into the state legislature this winter. Arguments in support of the New Jersey farmers' fight for tax relief will be assembled in tangible form.

Holstein Men Active

The Hunterdon County Holstein Association decided at its last regular meeting to hold a banquet at Flemington in late November or December. Holstein interests in the county have grown decidedly within the last two years and the county association has been conducting a definite program, purposing not only to build up the breed but to place the county on the map as a milk and stock producing area.

Cuban Tariff Rates Raised

New Jersey potato shippers will be confronted with a 50 per cent increase in the tariff rate on shipments to Cuba in 1928, caused by the passage of a new tariff act in that country. The rate has been advanced from 60c a sack to 90c.

Eight-year Chase Ended

Judge Soper, U. S. District Court, Baltimore, sentenced J. F. Wilson, formerly of Atlantic City, N. J., to two and a half years in Atlanta for swindling shippers while located in New Jersey. Eggs, poultry, hay and grain were the principal lines handled by Wilson, or Thornton, a name under which he traded at times. His arrest came after an eight-year chase extending from coast to coast.

Farmers Pay High Taxes

A tax survey in New Jersey shows that the farmers of this state are paying from 20 to 60 per cent of their incomes for taxes. An average of 600 farms studied during the last three years shows that the average was 31 per cent or $5.83 per crop acre.—A. K.

SUGGESTS NEW TOPIC

State Official Says Marketing Should Be Taught In High Schools—Electrical Service Extended.

Ithaca, N. Y.

DR. A. E. ALBRECHT, director of the New York City office of the State Department of Farms and Markets, told a convention of New York State high school teachers in Syracuse recently that a course in marketing should be taught in all agricultural high schools. He believes a new text book should be written dealing with merchandising, cooperation, selling, grading, advertising and other important topics.

First Testing of Cows Suspended

Due to the shortage of milk in the East at this time the state department of farms and markets has ordered that first tests of cows for bovine tuberculosis be suspended for the present. Retests will continue.

New Farm Paper Published

The Bureau Farmer, the official organ of the American Farm Bureau Federation, is now going into 30,000 New York State homes free of charge, as a part of the Farm Bureau service.

Farm Electrification

During the past year the Farm and Home Bureau state committees have continued to collect information as to the progress of farm electrification in other states and have developed acquaintance with the leaders of the industry in this state. Some extension of electrical service for individual farmers has been secured.—M. G. F.

WHAT A DIFFERENCE THE REMOVAL OF ONE HAT MAKES!

Hanes

makes warm friends and saves them money

1 HANES Collarettes are cut to size. A 40 suit has a 40 collarette. Won't roll or gap open.

2 HANES Cuffs won't pull off. They snug the wrist. Reinforced on the end to prevent raveling.

3 HANES Elastic Shoulders give with every movement, because they're made with a service-doubling lap seam. Comfortable. Strong.

4 HANES Closed Crotch really stays closed. Crotch can't bind, for HANES is fitted by *trunk* measurement as well as chest.

5 HANES Elastic Ankles never bunch over the shoetops. No ugly pucker showing under socks.

YOU can step into a suit of HANES and smile at winter winds. HANES brings you comfort and healthful warmth. It protects you from the bitterest blasts of winter. And—HANES prices save you money.

There is longer wear in HANES too. Just examine the quality of the material. Notice how soft and elastic and closely knit it is. Notice that those buttons are sewed on to stay. HANES Underwear is absolutely guaranteed—every thread, stitch and button. In every particular, HANES offers you the greatest underwear value that you can possibly buy.

HANES is made in extra heavy, heavy, medium and light weights. Union suits for men priced from $1 to $1.50. Shirts and drawers 75c and 85c a garment. Union suits for boys and children too, 75c to $1.

Ask for HANES at your regular store. If they cannot supply you, write to us today.

P. H. HANES KNITTING CO., Winston-Salem, N. C.

TRADE MARK HANES

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

OUR Leghorn pullets, hatched May 1, laid 1941 eggs in October. That is a 26 per cent production for the 240 birds. They are now, November 7, producing at the rate of 60 per cent. They have not been over-stimulated by laying mash as we did not wish to cause any molting this fall. However, they are being fed a commercial laying mash now, together with wheat and cracked corn for grain feed. Several people have expressed surprise at the rapid development and quick maturity of this flock, and want to know the reason. I have seen a number of farm flocks of pullets which are not more than two-thirds grown, although they were hatched earlier.

◆ ◆ ◆

IN THE first place, our baby chicks were from good stock. Then they were well fed from the beginning with all the balanced food they could eat. They never were without clean water, and always had shade protection. I am convinced that most farm chicks do not get enough of the right kind of feed to enable them to make the most rapid growth. Too many people depend chiefly upon cracked corn when chicks have free range, and then wonder why they are so slow in getting ready to lay. There are a number of excellent commercial starting feeds on the market so that there is no excuse for the horde of stunted chickens one sees in the country at this time of year.

◆ ◆ ◆

THE celery is being trenched, but not before we were scared a little. The temperature dropped below freezing—28 degrees was the lowest—but it seemed that it might go lower. I remembered what happened a few years ago when practically all the celery in this section was ruined by a hard freeze. When I got home the other evening I called up Herbert Starkey at Bustleton, one of our most successful celery growers. I asked him what he thought, and he replied that he was not alarmed. "Celery will stand a good bit of freezing if the ground is moist," he said. "But if the ground is dry, celery will freeze more easily."

◆ ◆ ◆

MOST of us keep putting off a lot of little but important fall jobs until cold weather catches us and more or less damage is done. I remember the experience of a neighbor family some years ago. The farmer and his wife were industrious, hard working people and, as usual, had a generous winter's supply of fruit, potatoes, turnips and canned goods stored in the cellar. It was the old fashioned kind which had to be banked up in fall to prevent freezing. A few panes of glass were missing from the two small windows. All this was scheduled to be attended to, but the farmer kept putting it off. One night early in December the thermometer suddenly dropped to near zero and the family's winter supply of food was ruined.

◆ ◆ ◆

PROBABLY it is because the old story of the Arkansas man who did not fix his roof hits us all a little that the story is so much appreciated. "I am going to do that before winter sets in," is a well-worn statement. We are going to fix the water pipes so they will not freeze, do some much needed work in the stables, lay a walk to the barn, oil and store the farm machinery, patch that leaky roof, install a water system, oh, well! You all know the list of things that should be done. Have you done all of them? Neither have we.

◆ ◆ ◆

WHAT are the people who are neither citizens nor foreigners? It seems by the figures that half of the people must belong to this unnamed class, since only about one-half the qualified people vote at the elections. There is a great deal of bombast during the course of a year about the wonderful privilege of being an American citizen. But when election day comes and the votes are counted we find that fifty per cent of the people place little or no value on this privilege. It takes more than a strut to make one a 100 per cent citizen.

The Cheerful Plowman

Work and Diet Needed!

GLUB GLIBBER'S dead! Poor pompous Glub! He overdid on rest and grub, he broke the laws of health! He couldn't keep up proper steam and eat as much as any team, in spite of all his wealth. I saw him failing, think of that, in spite of all his hills of fat. I saw it long ago; I knew for years the time would come, when with five others, sad and glum, we'd tote him, sure but slow!

One day I saw him in the bank and in a manner bold and frank I said my little say. "Look here," said I, "why tempt the fates by downing food by pails and crates, why gorge from day to day? Your stomach power is so much per, and can't increase, so I infer, so do not load it down until its rafters creak and strain and all its studdings shriek in pain; you're looking like a feather tick, so mountainous, and paunched, and thick, six chins below your hat! And exercise—my goodness, Glub, I knew you as a little dub back yonder years ago, and you were up and doing then, and traveling with the boys and men who worked a steady row but now you sit in easy chairs and puff when climbing up the stairs, you plant yourself for hours with pipe and paper close at hand, and bon-bons right at your command and tax your stomach powers! You grow more mountainous each day; some noon we'll lug your form away,—ah, how we'll have to strive! And as we tote you o'er the hill, six sweating men, we'll love you still and wish you were alive, but we shall then review your case, we'll say, 'Poor Glub, he stuffed his face and wouldn't work a mite! He stuffed his face until he died; he could have lived—!'" Ah how I tried—but Glub —is—dead—tonight!—J. Edw. Tufft.

Friendly Talks

By Edgar L. Vincent

I BELIEVE in inspired farmers. It is quite the thing to say, "Yes, I believe there were inspired men in the long ago, men who because of the peculiar gifts they possessed were led to do and to say things that may be called prophetic." But that was in the long ago, and only here and there a man or a woman was thus favored."

But there is no doubt whatever in my mind that we have today a great host of men and women right on the farm who are doing wonderful things, perhaps not in exactly the same line as of old, and yet, no less important and just as truly under the direction of a great Power.

We can think of some of the men of the long ago who were taken right from the farm to become prophets and leaders of the people. One of them was Gideon. His call came to him when he was working away out in the country. Since then men have been summoned from the farm to do great service. Cincinnatus was such a man. And more men than we know have thus for a time laid down the tools of the farm and responded to some call to serve.

But there are thousands today working on the farm whose names no history will ever gather up, but who are putting into their work true, faithful, earnest service for the good of humanity. I do not say that these men ever heard a voice from the skies calling them to give the best there is in them to all that they undertake to do. They are, however, obeying an inner voice which speaks to them no less truly than came to any man of past centuries.

Your Conscience Will Guide You

Some men are led by this voice speaking to them to give all their strength, all their energy and all their ability to the growing of choice fruits. Others turn to the raising of vegetables, or corn or wheat or potatoes. Still others, following the gleam, devote themselves to all-round farming, making everything they grow just as good and beautiful as they can. And it is the same way with women. Many a farmer's wife is just as surely inspired to give the best there is in her to the making of a good home and the bringing up of a family of boys and girls that will be a credit to the world as was the prophetess Deborah to do the work assigned to her by heaven. The world often passes by these chosen men and women without a sign of recognition. That is not strange, nor should we let it trouble us. Our work surely blesses the world and it will bring its reward.

The Little Everyday Things Count

If we do the little, everyday things of life cheerfully, as unto the Divine Ruler of the universe; if we plow and sow and think and leave the world a little better than we found it, that is all that is required of us. We are helpers of the Almighty, just as surely as if we were preachers or teachers or gifted men in any other profession.

How shall we get this consciousness of an inspired calling?

Just by living the right life day by day, clean, good, kind, asking all the time, "What more can I do to make my farm and the world about me better, more fruitful, more beautiful and to make those whose lives I touch happier and more blessed?"

And no line is drawn, none can be drawn, down through the world, on one side of which stand the chosen and on the other the less favored men of the farm. The field is open to everybody, for all can be good and kind and true and heaven-led men. The question with us all is, "Shall I be this kind of a farmer? "If we say, "Yes" to that we shall have all the help God has in His power to give! That will be enough to enable us to reach the height of our ambition!

More For Your Money when you buy a CHRYSLER

4 Chassis—$725 to $3595

EVERYWHERE you hear people praising Chrysler "52," "62," "72" or Imperial "80"—delighting in their smartness, performance and handling ease, their roadability, comfort and wealth of equipment—in other words, expressing their satisfaction with the continued leadership of Chrysler engineering and manufacturing.

With four great Chryslers ranging in price from $725 to $3595, it is exceedingly easy now to select any Chrysler—according to your needs and taste—with certainty you are getting the utmost value for your money.

New 52 — 4-Door Sedan, $795. Four other body styles priced from $725 to $875

Great New 62 — 4-Door Sedan, $1245. Six other body styles priced from $1095 to $1295

Illustrious New 72 — Royal Sedan, $1595. Six other body styles priced from $1495 to $1745

All prices f. o. b. Detroit, subject to current Federal excise tax. Chrysler dealers are in position to extend the convenience of time payments. Ask about Chrysler's attractive plan.

Health saved is money saved! Wear underwear which keeps you well!

FALL days are tricky. There's a nip in the early morning air. The middle of the day is warm. Five o'clock brings the first breath of night chill. Now is the time when most folks take cold.

Your doctor will tell you, "To keep well, keep your body warm and dry all the time." You can guard yourself against sudden changes of temperature. You can be warm and dry all the time, if you wear Wright's Health Underwear.

This comfortable, snug underwear is made of highly absorbent wool, which is a non-conductor of heat. It keeps out those chill, biting, icy winds of winter. They absolutely can't get in. Your natural body warmth can't get out, either. The patented loop-stitch with which Wright's Health Underwear is knitted increases its power of taking up body moisture. Your body is always comfortable, warm and dry when you wear Wright's Health Underwear.

Wright's Health Underwear is the very finest value your money can buy. The workmanship is the best. Seams well sewed, buttonholes which won't tear and buttons which won't come off. Sizes are cut to fit, no bulging, clumsy bunches. Three weights—heavy, medium and light—enable you to buy just the garment for your season or climate. Worsteds and wool-and-cotton mixed, as well as pure wool. Separate garments or union suits. The next time you're in the store, ask for Wright's Health Underwear. Wright's Underwear Co., Inc., 345 Broadway, New York City.

FREE—Write for our booklet, "Comfort," which gives interesting information about Wright's Health Underwear. Please mention your storekeeper's name.

GARDEN AND TRUCK

GILBERT S. WATTS, Editor
Logan Spring Farm

The Open Season for Odd Jobs Is at Hand

UNLESS unfavorable growing conditions or floods intervene there should be "string" beans aplenty this winter. Reports indicate that Louisiana plantings of this crop may reach 18,000 acres, three times last year's total. Destruction of sugar cane and cotton by floods has led thousands of farmers to plant truck crops. The Louisiana cabbage crop promises to be doubled. We hope the unfortunate farmers who are endeavoring to recover flood losses, to get some cash income, in this manner may not be disappointed through the low prices that so often attend sudden increases in any crop. Possibly widespread publicity calling attention to the value of "string" beans in the winter diet would help. It would be even better advertising if the term "snap" beans could be brought into general use and growers everywhere saw to it that they produced only quality varieties rightly grown, really stringless, "snap" beans.

The fall and winter crops of spinach in the United States are expected to total 31,000 acres this season as compared to 15,000 acres only four years ago. To what extent has this phenomenal growth been due to propaganda favoring more green vegetables in the diet? This has been free advertising. Will spinach consumption continue on the same high level as this wave of vitamin publicity grows older, loses novelty and possibly diminishes in volume as some think it is doing even now? Perhaps spinach growers will be forced to produce and pay for their advertising as citrus fruit growers have long been doing. In connection with the local market and roadside market I am sure our modest spinach advertisements appearing in local papers, have helped.

• • •

Last spring we planted an acre of red raspberries, the plants coming from a field which had been carefully "rouged" over a period of years in order to eliminate carrying "Mosaic."

Even though disease-free plants are obtained there is always danger of the disease being introduced to a new plantation by aphids, plant lice, especially when old, diseased berry patches or wild raspberries are growing nearby. Yesterday, upon request to our county agent, a plant disease specialist from State College visited our raspberry patch and marked seven plants which show mosaic. These must be grubbed out root and stem and will be burned to lessen spreading of this disease which has practically wiped out the raspberry industry in many localities. The recommendation was also made that all wild raspberries be kept down on an adjoining steep hillside.

It also seems that red raspberries are especially bad actors in providing a source of disease which is then transmitted to the black caps by insects. We were strongly advised to locate at least 500 feet distant a patch of black caps which is to be set in the spring. Indeed, it seems the time has arrived when our farms must be run like hospitals since separate wards are required for the different kinds of raspberries, and seed disinfection, plant bed soil sterilization, spraying and dusting have become routine matters. Cleaning up and plowing down of diseased crop refuse and pest harboring rubbish or fence rows falls in the same category of preventive measures. November is the "open season" for such work.

• • •

Where is the sprayer? Will Jack Frost find any lurking pockets of water in cylinders, in hollow top pistons, in pipe bends, in valve boxes or pressure regulator? The mere opening of a drain cock is not sufficient, sediment may have clogged the base of the cock. Poke a wire through and be sure. If there is an engine, how about the water jacket? A friend once told me of going through a gas engine plant in January and finding the foundry busy casting jackets for an obsolete model. The foreman explained that these were being provided in order to meet the annual early spring rush orders for replacements. Irrigation equipment, water pipes around hotbeds, coldframes, heating plant and in plant growing houses which will not be warmed up until late winter also deserve inspection.

If there is celery to be sold for Thanksgiving use, it is wise to advise one's customers well in advance. Jobbers, wholesalers and retailers all recognize the importance of the celery trade at this season. He who goes to market without notice only a day or two before the eventful Thursday is likely to find that dealers of all kinds have provided for their needs.

Rambles of a Pennsylvania Fruit Grower

XXVII. Oregon Prunes and Cherries

THE heart of Oregon, agriculturally, is the Willamette Valley. Here are grown the famous Oregon cherries, the big ones that come East packed in shallow boxes, tier upon tier in regular alignment. Here also is the home of the Italian prune. Unlike the Rogue River Valley, it is a region of diversified horticulture—apples, pears, strawberries, loganberries, blackberries and other fruits are grown commercially besides prunes and cherries. The Valley is about 120 miles long and twenty miles wide, a beautiful rolling country, lush with verdure. Here the orchards are on the foothills, not on the floor of the Valley as in the Rogue River. "The winters are mild and the summers are cool," (quoted from local sources) but the humidity and precipitation are likely to be high at all seasons, with fifty inches of rain or more. Land is comparatively cheap, one hundred and fifty dollars an acre will buy excellent orchard sites.

The most important fruit of the Willamette Valley is the prune. The Italian is grown almost exclusively. This is black and tart when dried, as distinct from the French prune of California, which is sweeter and lighter in color. When I last visited the Willamette Valley, twenty-five years ago, the prune growers were knee high in clover. Orchards sold for $1000 an acre or more and there were still greater expectations. The inevitable aftermath, deflation and disillusionment, came. The pronounced slump since 1920 has carried prune orchard values to their lowest point. Today some of the best orchards can be bought for $200 an acre, which is but little more than the value of the land. There is general and profound discouragement.

Carry Prune Crop as Side Issue

One of the obstacles to improvement is the fact that most of the acreage is held by general farmers. The Italian prune, as grown here, requires no spraying, no thinning and a modicum of other cultural care. So it has come about that there are ten to twenty-acre prune orchards on many general farms of sixty to a hundred acres, and the prune crop is a side issue in general practice. Under these conditions it is difficult to get the growers together on any program of improvement, which inevitably must involve standardization of crops, collective advertising and cooperative effort in other directions.

There are 60,000 acres of prunes in Oregon producing around 90,000,000 pounds annually, as compared with the 220,000,000 pounds of California. I visited Dallas, "The Prune City," which has 11,000 acres within six miles of the city limits. Many of the orchards reflect the prevailing depression by neglect of cultivation and pruning. The only spraying is once in three or four years to kill the moss which would smother the trees. Brown rot occurs sometimes but is not considered serious enough to justify spraying. There is no pollination trouble and no need for thinning the fruit.

Oregon prunes are dried in the evaporator, not in the sun. The cost of production is four and a half to five cents a pound, which is about what the growers have been getting in recent years. The outlook for these prune growers is not bright unless they can agree to cooperate on a standardization and advertising program which will greatly increase their outlet. California fruit growers have demonstrated that this can be done.

Willamette Valley cherries, on the other hand, have been doing well. This is the land of big cherries. I have seen some that measured nine or ten to the foot, which is large enough to fit any mouth of decent dimensions. They are all sweet varieties. There is a very interesting pollination question here. The three leading sorts—Royal Ann or Napoleon, which is the same as the common Oxheart cherry of Pennsylvania, Bing and Lambert—all are not only sterile themselves, but also are inter-sterile; no one of them is able to fertilize either of the other two or itself. It is necessary to plant Black Republican or Waterhouse with them in order to have fruitful trees. There is little damage from frosts and no orchard heating is done, but prolonged, cold rains at blossoming time may interfere with pollination.

There is practically no brown rot on cherries and very little spraying is done. A few growers apply Bordeaux and arsenate of lead just before blossoming, and sometimes one summer spray. It is the general practice to plant trees of the Mazzard stock in the orchard and topwork them to the desired variety when three or four years old. This should be done in Pennsylvania, also, using the native Mazzard, which is the common, wild, sweet cherry of Pennsylvania. It will give longer lived and more healthy trees than

(Continued on page 23)

Grows a Foot a Day

THE United States Department of Agriculture recommends the timber bamboo for culture in most of the cotton states of the South. B. T. Galloway writes:

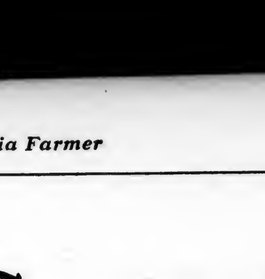
"Eventually, when a grove is fully established, magnificent stems shoot up to a height of 60 to 70 feet, furnishing poles 4 to 5 inches in diameter at the base. The plants have the remarkable faculty of reaching their full size in a short time, usually in two to four weeks, depending on the age of the parents. The new shoot suddenly bursts through the ground in the spring and then grows a foot or more a day. As the cane shoots skyward the leaves, branches and branchlets unfold, producing a most striking and beautiful effect. There is a majesty and grandeur to these plants that make a strong appeal to the imagination."

After attaining full size the plants may require three to five years to fully harden and ripen.

Camel

The cigarette that earned first place by its goodness

The greatest endorsement ever given to a cigarette is revealed by the fact that Government figures show that more Camels are being smoked today than ever before. An endorsement by the many—not the few.



If all cigarettes were as good as Camel you wouldn't hear anything about special treatments to make cigarettes good for the throat. Nothing takes the place of choice tobaccos.

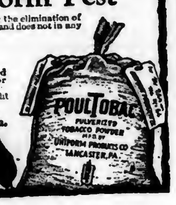
UNIFORM PRODUCTS CO., Lancaster, Penna.



Why are there so many charming women today?

NEVER before have there been so many charming women. Wherever you go, you find them. Vivacious, happy, beautiful, delightfully dressed in most exquisite taste.

Clear, pink-and-white complexion, luxurious, well-kept hair, gleaming teeth, trim athletic carriage—these are almost universal characteristics of American women of today.

Why?

At first thought it may sound absurd, but one of the most powerful teachers has been advertising.

Advertising has helped to teach us all that the real basis of beauty is health and cleanliness. We are the greatest users of soap and water in the world.

Advertising has taught us how to care for our teeth, our hair, our feet, our hands and our complexions.

Advertising has taught us how to dress—how to choose colors and fabrics and becoming styles.

Advertising has taught us how to talk, how to entertain.

One reason why so many women are charming is because so many women are reading advertising. From advertising they are learning the secrets of great beauty specialists. They are getting health information of inestimable value. They are learning the secrets of becoming dress from the famous designers of Paris and New York.

Advertising is one of the biggest reasons why so many women are so charming.
Read advertising regularly

Mr. Mahar Carried His Fighting Qualities into Peacetime Pursuits

LAST January at the New Jersey State Poultry Show at the Trenton Armory, Mr. Daniel H. Mahar, of the Kwality Farm at Princeton Junction, carried off the sweepstakes prize for utility Leghorns and included with his winnings first cock, first pullet, first young pen, second old pen and second cockerel. Quite an achievement in strong competition for a breeder who had only been at it a few years. This fall the representatives of the Soviet government visited leading poultry farms in 22 states, and came back to Danny Mahar to select his birds of superior size and high egg-laying record to take back with them to improve the laying stock of Russia. It was quite an honor, and it left the owner richer by $200 for 14 pedigreed yearling hens and four cock birds. So I went to see Mr. Mahar and learn if I could just how it was done.

First a little history. It will throw some light on some of the reasons for his success, and give an insight into the character of the man behind the birds. But it wasn't Danny Mahar who spoke of his war record; he will talk of his birds but not of that. However, back in 1916 he was with a New York National Guard unit on the Mexican border, and there he contracted typhoid fever. But when the World War broke out, he managed to pass inspection. At Spartansburg, N. C., he contracted pneumonia. While his company was en-route to embark at Newport News, he disappeared from the hospital. When the ship was in mid-ocean, he was there with his company, and while it was never discovered just how he had got by inspection, it was rather too late to send him back. At Bony, on the Hindenburg line, he was seriously wounded during the fighting of September 18, 1918.

Ticketed for a hospital in England, he disappeared again, to turn up at the front lines; but shrapnel, gas, lack of food and the effects of sickness were too much for this little fighter, and his war duties were done. But he held medals from America, England and France. After three years in government hospitals he took two years of vocational training under the government, studying poultry breeding under Rice at Cornell. Then the government helped him to get a start, and the fighting qualities and persistence that he showed during wartimes enabled him to make a success of peaceful pursuits.

Size and Quality His Goal

Mr. Mahar secured his foundation stock of Leghorns from Prof. Rice, of Cornell, and with it he has blended blood from the Hollywood and Wyckoff strains. For several years he has bred, trapped and selected with certain ideals as his goal; a large bird that would possess points of beauty, lay exceptionally well and produce eggs of large size. His birds are not only pedigreed, but are blood tested and certified by the state as well.

When I visited his farm he was busy laying a concrete floor in a new poultry building, but obligingly knocked off work long enough to answer questions and tell about his breeding work. This new house was right up-to-date with lights, automatic water devices and a concrete floor that sloped to an outlet so that it could be flushed with a hose in the interests of sanitation.

Mr. Mahar is using a ration not greatly different from the formula recommended by the New Jersey Station. He is much in favor of plenty of yellow corn in the feed, which is right in line with present good practice. During the summer he feeds alfalfa for green feed, and uses cabbage during the winter. A moderate amount of artificial light is used on breeders.

Impressed by Size of Birds

In examining the older birds, their size impressed me at once. But the records showed that they could lay as well as make weight for the flock average on 170 birds for a year was 218 eggs. On flocks including birds four years old the average was 160 eggs, which is a mighty good record for old birds. In breeding for pedigreed cock birds, hens of large size with records of 225 to 250 eggs are used. Outside blood is not used, but various pens and families within the flock are worked over to get the males and as vigor, hatchability and low mortality prevail, the method is giving good results.

There is always danger in introducing outside blood into a strain, as the result may not be what is anticipated. An outstanding example of the success of these methods was the cock which took first at the Trenton show. His dam was "99," who had laid 262 eggs as a pullet. Her weight was 6 pounds 2 ounces, and she produced an egg weighing 28 ounces per dozen, which is an exceptional size. The cock weighs 7 pounds when in condition, and while much above the standard weight, is otherwise a fine example of the breed.

Mr. Mahar's stock is in great demand, but with the exception of the adult birds sold to Russia, only baby chicks have been sold. As the flock numbers less than a thousand birds, not all of which are breeders, there is not a great surplus above home requirements.

"I turned down orders for 40,000 chicks and could have sold 75,000," said Mr. Mahar in this connection, "and although I might have supplied some of them with chicks from flocks of my strain in the neighborhood, I am running a breeding farm and not a hatchery, so that nothing goes out unless I raised it myself. I anticipate a big future, and I do not intend to jeopardize it by present sales not up to the standard I have set."

Which goes to show that if a man has the brains and the grit to develop something good, he will have no difficulty in finding a market.—R. L. S.-H.

Sparrows Carry Germs

ENGLISH sparrows carry the germs of coccidiosis. When R. P. Tittsler, bacteriologist of the Pennsylvania State College, examined 21 of these birds which had been killed at the poultry plant, he found that this poultry disease was being carried by seventeen of them. It has caused severe losses to poultrymen in Pennsylvania this year. Mr. Tittsler is making wider investigations concerning coccidiosis in sparrow flocks and expects to obtain some interesting results.

The whole world knows Aspirin as an effective antidote for pain. *But it's just as important to know that there is only one genuine Bayer Aspirin.* The name Bayer is on every tablet, and on the box. If it says Bayer, it's genuine: and if it doesn't, it is not! Headaches are dispelled by Bayer Aspirin. So are colds, and the pain that goes with them: even neuralgia, neuritis, and rheumatism promptly relieved. Get Bayer—at any drugstore—with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Roup Epidemic Killing Poultry

Birds sneeze, wheeze and choke. Throat rattles. Nose runs. Spreads rapidly Act at once!

Readers who find colds or roup starting in their flocks will be interested in a letter written by Thomas Pulliam, Shiveley, Ky. He says:

"I have had birds with their eyes closed and every form of roup, and saved every one of them. Last winter I had a Barred Rock cockerel that was nearly dead. He had dropped from 7½ to 2½ pounds. I gave him Roup-Over and it worked like magic. In two weeks, he was back on the firing line and fighting every rooster on the place. I can't understand why people let their birds die with roup, when Roup-Over will save them."

It is amazing how quickly and easily colds and roup can be ended by this method. If the trouble is already started, a few drops of Roup-Over, applied in the nostrils, will usually banish every symptom in one day. Better still, a few drops used in the drinking water guards the whole flock against roup, colds, and other epidemics. A liberal supply of Roup Over can be obtained by sending fifty cents (or $1 for large size holding 3 times as much) to **The Harrell-Dugger Co., 241 Postal Station Bldg., Indianapolis, Ind.** As Roup-Over is guaranteed to do the work or money refunded, it costs nothing to try. Readers will find it entirely different and much quicker in action than anything else ever tried for roup and similar infections.

Danny Mahar and his champion rooster

Nest Box Notes

FALL colds often result from drafts. Long houses not broken up by partitions are likely to be drafty and for this reason it is customary to divide them into pens holding one hundred or more fowls. The partition doors in our houses are covered with roofing paper to insure that each pen is a little world in itself. Such doors are lighter than if made of solid wood, but it is necessary to tack poultry wire over the paper to prevent holes being punched thru. We once used burlap bags to cover the doors but hens will pick holes in this material.

* * *

Pullets that roost on window sills, hoppers, nest boxes and other places where they have no business to be often are the first birds to catch cold and start an epidemic in the flock. Such birds should be placed on the roost with the others after nightfall and soon will learn to go where they should. If the windows are made without sills and the nest boxes have slanting tops it will help to prevent this practice.

* * *

If the pullets at this time of year seem rather fat, it is no reason for alarm. On the contrary, most poultrymen are anxious to have their birds in plump condition as they start laying. Leghorns, especially, are likely to get thin under the strain of heavy laying, with the result that the flock slumps in production and is easy prey to roup, pox, prolapsis or whatever comes along.

PAN-A-CE-A
puts hens in laying trim

Put your hen in laying trim —then you have a laying hen

YOU WANT music in your poultry yard—song, scratch, cackle.

You want an industrious hen—a hen that will get off her roost winter mornings, ready to scratch for her breakfast.

A fat, lazy hen may be all right for pot-pie, but for egg-laying—never!

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily, and see the change come over your flock.

See the combs and wattles turn red.

See them begin to cheer up and hop around. See the claws begin to dig in.

That's when you get eggs.

Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.
60 hens the 5-lb. pkg.
200 hens the 25-lb. pail
500 hens the 100-lb. drum
For 25 hens there is a smaller package

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

DR. HESS & CLARK, Inc., Ashland, Ohio

Dr. Hess Instant Louse Killer Kills Lice

10 Hens Lay 10 Eggs a Day

Winter doesn't stop Mr. Henry's hens

Readers whose hens are not laying well during these days of high egg prices will find much of interest in the following letter from C. D. Henry, Alverton, Pa. He says:

"I placed 10 pullets by themselves, and fed them Don Sung. The third day my eggs increased from 3 to 9 a day. They have had Don Sung ever since and have laid continuously. Yesterday I got 10 eggs from them and am willing to make affidavit to it. Don Sung certainly gets the eggs. It has paid for itself many times over."

Don Sung, the Chinese egg laying tablets which Mr. Henry used, are opening the eyes of chicken raisers all over America. The tablets can be obtained from the **Harrell-Dugger Co., 135 Postal Station Bldg., Indianapolis, Ind.** Poultry raisers whose hens are not laying well should send 50 cents for a trial package (or $1 for the extra large size, holding three times as much). Don Sung is positively guaranteed to do the work or money promptly refunded, so it costs you nothing to try. Right now is the time to start giving Don Sung to your hens, so you will have a good supply of fresh eggs all winter.

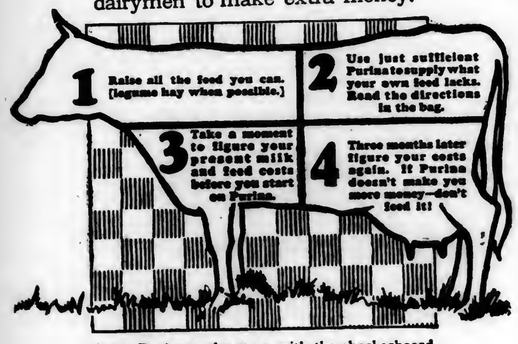
60,000 dairymen can't be wrong!

Here's the plan used by 60,000 dairymen to make extra money.



1
Raise all the feed you can. [legume hay when possible.]
2
Use just sufficient Purina to supply what your own feed lacks. Read the directions in the bag.
3
Take a moment to figure your present milk and feed costs before you start on Purina.
4
Three months later figure your costs again. If Purina doesn't make you more money—don't feed it!

Order Purina at the store with the checkerboard sign. It is *bound* to make more money for you.

DAIRY

A. A. BORLAND, Editor
Head of the Department of Dairy Husbandry
Pennsylvania State College

First Jefferson C. T. A. Increased Butterfat Thirty Pounds in Second Year

THE first Jefferson County Cow Testing Association finished its second year June 30, 1927, with twenty-eight full-year members. In addition one member was in the association during part of the year. The total number of cows in the association during all the year was 398.

Through cooperation of the members with the tester it has been possible to raise the average production of butterfat in the association from 270.2 to 301.9 pounds.

The 300-pound herds have been increased from nine to seventeen.

Many of the members have disposed of a large number of their lower producing cows and also made use of better feeding and herd management suggestions offered by the tester.

Two herds break all previous records in the county and several other members have a considerable increase over last year in milk, butterfat and income above feed cost.

There was a silver cup donated by the Jefferson County National Bank to the owner of the herd with the highest average increase in butterfat production over last year.

This cup was won by Harry Marshall who has an average of 7384 pounds of milk and 251.0 pounds of butterfat for 1926 and 7866 pounds of milk and 319.2 pounds of butterfat for 1927, which is an increase of 482 pounds of milk and 68.2 pounds of butterfat over the previous year.

The result of the association for two years is as follows:

Year	Avge no. cows	Pounds milk	Pounds butterfat
1926....	244.34	5952	270.2
1927....	293.69	6800	301.9
Increase..	49.35	848	31.7

The result for the year is as follows:

Average number of cows..	293.69
Average number of pounds of milk per cow	6800
Average pounds of butterfat per cow	301.9
Percentage of butterfat per cow	4.4
Value of product per cow..	$265.63
Cost of pasture per cow....	8.23
Cost of roughage per cow..	39.12
Cost of grain per cow.....	54.73
Total cost of feed per cow.	102.08
Value of the product above cost of feed per cow.....	163.55
Returns for $1 expended for feed per cow	2.60
Feed cost per 100 lbs. of milk per cow	1.50
Feed cost per pound of fat per cow	.34

Following is a grouping of all cows producing over 300 pounds of butterfat. These cows are grouped as follows: Group 1, above 500 lbs. butterfat, 3; group 2, above 400 lbs., 26; group 3, above 300 lbs., 84. Total number of cows producing over 300 lbs. butterfat, 113.

J. P. Winslow, county agent; W. E. Arnold, assistant county agent; George R. Kennedy, tester in charge; figures compiled by I. O. Sidelmann.

Owner.	Average no. cows	Breed	Pounds milk	Lbs. butterfat

New Jersey Boy Wins Highest Honors

A NEW JERSEY farmer boy won highest honors of the National Dairy Show, Memphis, Tenn., on judging milk. John B. Tilton, Jr., Mount Holly, Burlington County, was rated as the best judge of milk in the United States so far as boys of the vocational agricultural schools are concerned. This distinction was won in competition with agricultural boys from every part of the country.

John, Jr., is seventeen years of age and is an agricultural student in the Mount Holly High School. Earlier in the fall he represented his school at the Trenton Fair and was selected as one of the four highest ranking boys in the state for the New Jersey team. Following the picking of the team at Trenton in September, the boys were given a special training at the Agricultural College previous to going to Memphis.

Competing against young Tilton were boys from 33 states. In all, 98 boys were pitted against Tilton in the milk judging contest for the high individual honors. To Clarence B. Davenport, Mt. Holly, goes the distinction of preparing this youthful judge who has won such high national honors. Mt. Holly is ranked as one of the best agricultural schools in the state.—A. K.

Wet Clover Undesirable

I have been told not to pasture clover when there was any moisture on it, only to allow cattle on when the field of clover was dry.—S. E. W., Westmoreland County, Pa.

There is more danger of cows bloating when they eat clover hay that is moist. Grass or clover when wet by dew or rain frequently disorders digestion and brings on bloating. Frozen roots or pastures covered with frost should also be regarded as undesirable. When food has been eaten too hastily or when it is cold and wet, the digestive process is imperfectly performed and the food contained in the paunch ferments during which process large quantities of gas are formed.

The advice you have received, therefore, is correct in as much as it is undesirable to pasture clover when it is wet.—A. A. B.

Gypsum Used on Dairy Farms

THERE was a time when gypsum or land-plaster was used extensively on farms in the eastern United States. With the introduction of commercial fertilizer containing considerable quantities of gypsum, the purchase and use of gypsum as such have been reduced to insignificant proportions. There are sections in the United States where gypsum is still used in large amounts. For instance, in certain sections of Oregon and Idaho it is used as a source of sulphur for clover and alfalfa. In California it is used in very considerable amounts for improving the texture of land inclined to accumulate alkali salts and to become impervious to irrigation water.

Available as a By-product

On the other hand, in Pennsylvania, New York, New Jersey and other eastern states the supply of sulphur seems to be sufficient for the ordinary needs of crops. A certain quantity of sulphur is brought down from the air in rain and snow, some of it is supplied in animal manures and some of it in commercial fertilizers containing sulphate of ammonia and acid phosphate, the latter being rich in gypsum.

Very large amounts of gypsum are available as a by-product. The writer had two communications recently; one from the owner of a grinding plant who thought he could grind to advantage old plaster of Paris forms used by pottery makers. This plaster of Paris had been converted into gypsum when the forms were prepared. He claimed that he could grind these old forms and sell the finely ground gypsum f. o. b. his plant at about $5.00 per ton. Another letter is from a manufacturer of chemicals who makes large quantities of gypsum as a by-product. The latter contains one per cent of available phosphoric acid and a larger quantity of unavailable phosphoric acid.

Justified if Cost is Reasonable

There is no doubt that if gypsum could be had at the consumer's station at something like $6.00 to $8.00 a ton it might pay to use it in cow stables for the sake of improving their sanitary condition and for conserving a portion of the ammonia that tends to escape into the air. It is well known that small quantities of gypsum mixed with manure encourage the latter to ripen more evenly and to give better results when applied to the soil. Hence, the use of gypsum in the eastern states where commercial fertilizers are used more or less regularly may be justified on dairy farms, provided the material may be obtained at the reasonable cost noted above.—J. G. Lipman.

Lancaster Co. Farmer Wins 1927 Championship

AMOS EBERLY, Lancaster County farmer, is the 1927 champion potato grower. His yield of 651.4 bushels on a measured acre is the largest reported this year to E. L. Nixon, potato disease specialist of the Pennsylvania State College and founder of the famous Keystone 400-Bushel Potato Club.

Eberly plowed under alfalfa sod shallowly last fall and plowed it deeply this spring. He planted 301 bushels of seed May 4, spacing his potatoes 29 by 30 inches. The field received eight tons of manure broadcast and an application of 1200 pounds of 3-12-5 fertilizer in the row. The potatoes were cultivated four times, weeded six times and sprayed 12 times.

There are 115 members of the 400-Bushel Club reported to date, which breaks last year's record of 97. Lehigh County leads with 16 of the big crop growers.

Ray Briggs, of Luzerne County, made a desperate effort this year to prolong his championship to a four-year standing. In 1924 he grew 637.6 bushels, in 1925, his yield was 571.4, and last year he established a state record of 665 bushels.

Announcing Our New Ball-Bearing Cream Separators!

A beautiful black-japanned, ball bearing cream separator for every dairying need. Six sizes, capacities 350 to 1500 pounds of milk per hour—"for one cow or a hundred." Hand, belted, and electric. Demonstrated, displayed, sold and serviced by McCormick-Deering dealers in every community. Write for the completely illustrated booklet about the new machine.

The NEW McCORMICK-DEERING

THE Harvester Company is proud to announce a distinctly modern line of cream separators, new in design, improved throughout, which we believe is absolutely qualified to render a new all-around satisfaction not to be had from any other separator.

Every one of the six sizes of the New McCormick-Deering now has *high-grade ball bearings at all high-speed points.*

To make the machine as durable and pleasing as it is possible to achieve, the celebrated process of exterior finishing called *japanning* has been employed in the New McCormick-Deering. You will certainly admire the *hard, brilliant, mirror-like lustre* produced by many coats of japan finish requiring eighteen hours of baking at high temperatures.

These are features of *easy running, durability, and beauty.* The New McCormick-Deering has many other features and details of design that combine to make it *a most attractive and thoroughly efficient cream separating machine.*

Let the machine *prove itself* before your eyes, and before you buy. The McCormick-Deering dealer will gladly give you a complete demonstration without obligation, on your farm or at his store.

Adventures in Candy Making

The Thermometer Turned Failure into Success

BEFORE I bought a thermometer, candy making usually ended in grief for me, for while I might boil my fudge again, there was not much to do about chocolate creams with too thin coating and too large bases.

It is possible to make good candies without a thermometer, but necessary to keep in practice, and to use very cold water for testing. Even with the use of a thermometer, you will need to use your best judgment until you have a little experience.

On a warm, humid day, candy making will not be successful. Do it when the air is clear, crisp and cool!

For perfect fudge use a small burner, a hot fire, and a broad, heavy-bottom aluminum sauce pan. Place two-thirds cup of cream or milk, 2 cups fine granulated sugar, 2 level tablespoons white corn syrup in pan and stir constantly as it dissolves, and frequently thereafter. After fudge is boiling, add 2 ounces of chocolate melted by setting in pan of hot water.

When a half teaspoon of the hot mixture dropped into very cold water forms a ball that can barely be gathered together and picked up with the fingers, set the pan into a basin of cold water. This is 236 degrees F.

Don't Stop Beating

When cooled to 100 F. add two tablespoons butter, 1 teaspoon vanilla, beat hard and continuously. Do not stop as long as it can be beaten for it might turn sugary. If you don't stop beating in time to spread it into the buttered tin, it can be kneaded. You may omit the chocolate and use chopped nuts, candied cherries or chopped maraschino cherries.

Do not scorch fudge. Use a heavy pan and stir often. If it curdles, beat hard during boiling. Condensed milk can be used instead of cream. The butter may be increased to 4 tablespoons.

If it is cooked too long, or not long enough, add a little milk, stir as it dissolves, and cook again—there is no harm done.

Grainy fudge may result from beating while fudge is hot, or from not beating hard nor long enough.

For cake frosting, cook only to 232 F. and pour over the cake instead of into a tin.

Fondant Requires Care

Use water instead of milk for fondant making. The recipe reads: two-thirds cup boiling water, 2 cups sugar, 2 level tablespoons white corn syrup. Stir until dissolved, put a tight cover on the pan and let cook 2 minutes. Remove cover, insert absolutely clean thermometer (free from sugar from previous cooking). Wipe the sides of the pan with a pastry brush, dipping it into cold water. This is better than a fork wrapped with cloth. Wipe side of pan continuously. Do not stir the fondant as it cooks, nor jar the pan, as the least jarring may start crystallization.

Cook to 240 F., remove thermometer, turn out fire or slide pan to back of stove without jolting. When it stops boiling, pour in a thin stream on a meat platter which has been rinsed with cold water. The syrup is not scraped out of the pan, as this might start crystallization. Sprinkle slightly with cold water and let stand until cool enough that it crinkles when touched with the fingernail. Do not move the platter during cooling.

Beat fondant hard and continuously with a wooden spoon until creamy white, then knead with hands, cover tightly with damp cloth for an hour or more to ripen. Then knead, color and flavor.

CHOCOLATE CREAMS

Either fudge or fondant is used as the basis for chocolate creams, using any desired flavor or color and shaping into balls, cones or cubes.

Buy regular coating chocolate, labeled for dipping chocolates. It costs from thirty to sixty cents a pound, depending upon quality. It may be sweet, bitter or milk chocolate for coating.

The chocolate is grated by running through food chopper and placed in a bowl. This is set in the top of the tea kettle, so that no steam or water can get into the chocolate as that would make it unfit for dipping. Stir constantly with a wooden spoon, applying as little heat as possible. After melting, remove from over the hot water and beat until cooled to 80 degrees F. It is then cool enough that a center dropped into it, turned over, and taken out, may be placed upon heavy oiled paper, and be perfectly coated.

Do not add any paraffin, butter or other substance to thin the chocolate. If the right kind is purchased, and it is not overheated, it will be thin enough to handle nicely. Centers can be dipped by hand, but I find it easier to use forks, letting the excess chocolate drip off, before placing, upside down, on heavy oiled paper or oil cloth.

When the chocolate in the bowl cools, it can be warmed by placing over hot water. When there is not enough left to dip any more centers, add nuts and dried fruits, coat well and dip out in clusters. These chocolate-coated nuts fill the cracks in packing candy boxes.—Doris W. McCray, Iowa.

Note:—We will be very glad to help you select a dependable thermometer for insuring better results in your candy making. And it may interest you to know that the same thermometer is very useful in jelly making. For information write Home Page Editor, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

Coating centers with chocolate

Thanksgiving

FOR the fruits upon the tree,
For the birds that sing of Thee,
For the world in beauty dressed,
Father, mother and the rest,
Father in heaven, we thank Thee.—Emerson.

Another Menu Suggested for the Hunting Season

PERHAPS you will appreciate knowing about a supper I built around rabbit as the meat dish, which won praise as the "best meal I ever ate."

Here is the menu I served.

Baked Rabbit with Gravy
Red Kidney Beans—Plain Cooked
Fried Potatoes
Cabbage Slaw with Hot Sauce
Apple Sauce—Warm
Hot Corn Bread Pumpkin Pie
Lemonade, for ourselves, since we much prefer it; and Coffee for guests, if they desire.

The same heat baking the rabbit cooks the beans. Later the potatoes are fried, the apple sauce made and the slaw prepared while the bread is baking. The pie may be baked any time.

Baked rabbit with gravy is most appetizing. Clean the rabbit, cut up and put to cook on top of the stove, in salted water to which has been added generous bits of beef suet. Let cook for fifteen minutes, remove to a roasting pan, sprinkle with pepper and place a thin slice or two of onion in pan. Pour over it the suet stock and bake until tender. Remove from pan and make gravy of the liquid and fat left, thickening with flour and seasoning with salt and pepper to taste.

My second recipe for serving rabbit is roast rabbit. Clean without cutting into pieces. Stuff with bread dressing mixed with a corn fritter and tomato sauce. Sprinkle rabbit with salt, a mere dash of pepper, and lay on a rack in a roasting pan and roast until done. A rich gravy may be made from the stock much the same as for the baked rabbit.

I make the corn bread as follows. Blend one pint of corn meal sifted fine, one heaping tablespoon each of flour and sugar; one teaspoon of soda. Add one egg; mix thoroly with two cups of not too sour buttermilk. Pour into hot, greased pan and bake in hot oven until golden brown.—Gertrude Shockey.

Roast rabbit may be served hot or cold

Every Housewife Needs a Hobby

THE woman who works her fingers to the bone for her family may be pointed out as a model housekeeper, but she seldom has the time or energy to be an agreeable companion to her husband and children. If she plans her housework so that she has some time for a hobby, she may be able to make both herself and her family happier.

The hobby may be drawing, painting, sewing or interior decoration, for all have many applications in the average home, and when they are considered as a hobby instead of as a task they become much more interesting. Nature study and reading may be made particularly fascinating when children share in them. Gardening provides a chance to be out-of-doors and yields attractive flowers for the house or food for the table as well. Even accounting may become a hobby for a woman who likes to juggle figures or is fond of buying. A hobby pursued in an interesting way will often give a wholly different outlook on life and put a new zest into every-day living.—N. C. A.

Who Will Be the First?

"PLEASE give us some recipes that are strictly 'Pennsylvania' dishes."

I am wondering if such a thing is possible today. Since we have been enjoying cross-continent tours and nation-wide "hook-ups" are frequently on the air, it seems that California and Maine are almost talking across the backyard fence. Neighbors are neighborly and recipes get mixed up, so there you are.

Last year produced two Keystone recipes and many of you will recall Holiday Dutch Cakes and Shoo-Fly Pies. Who will be first to answer this call for any recipe that is strictly "Pennsylvanian"? Please send your offerings to Home Page Editor, Pennsylvania Farmer, 261 South Third St., Philadelphia, Pa.

True Thankfulness Shown in Simple Hospitality

THANKSGIVING is the ideal day for a fine family gathering, but with folks as widely scattered as they are today, often that is impossible. Every locality has lonely persons, so do let's consider them this year. Overloaded tables are unnecessary and good taste demands that a dozen kinds of pie and several cakes and puddings be forgotten and one good dessert with no dyspepsia following be the rule.

A group of thankful-hearted folks will enjoy this simple menu which is within reach of almost every family.

Cream of Celery Soup
Platter Meat Loaf surrounded by Mashed Potato Cones—Parsley Garnish
Baked Squash Brown Meat Gravy
Cabbage Salad
Whole Wheat Bread Butter
Milk Cider Coffee
Pineapple Short Cake
Whipped Cream

Table decorations may be gorgeous colored leaves, with a few last chrysanthemums. A fine bowl of rosy red apples or golden russets and a bunch or two of grapes will add autumn flavor. Serve it all with the best of human kindness and gratitude for food and friends.—Mrs. E. M. Anderson, N. Y.

Christmas Seals Stamp Out T. B.

AN UNDENIABLY successful venture in public service is the Christmas seal sale which is held annually throughout the country and which soon will be before us. Like all big business enterprises, its growth is due to the commonly prescribed rules for success; namely, vision, hard work, thrift and giving the public what it wants.

Within twenty years this undertaking, which is the chief support of the national, state and local tuberculosis associations of the United States, has developed from a $2000 business to one whose gross receipts in 1925 were approximately $4,900,000. From a tiny hospital for tubercular patients in Delaware which was financed by the first $3000 in 1907, it has become the means for creating a network of sanatoria, hospitals, open air schools, clinics and other public health activities that protect the American people against what was once known as the Great White Plague.

Finances Many Organizations

According to the National Tuberculosis Association, the mother of this gigantic movement, the Christmas seal sale finances approximately 1500 state and local organizations besides the national association. The united efforts of these have resulted in the establishment of 700 sanatoria and hospitals, with nearly 70,000 beds for tubercular patients; more than 1000 open-air schools; nearly 12,000 public health nurses, and over 600 clinics. In addition, children's camps and preventoria, nutrition classes and numerous special campaigns are made possible by these little penny stickers.

Altogether, the record of the tuberculosis Christmas seal inspires the confidence and continued patronage of its millions of supporters.

Aunt Ada's Axioms: We don't need to worry about our young folks going to the dogs if they have had the right start with good, healthful surroundings in the home.

Style Interpreted by New Details in Early Winter Modes

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5650.—Four sizes: 2, 3, 4 and 5 years. A 4-year size requires 2 yards of 36-inch material. Price 10c.

5601.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅝ yards of 54-inch material. Price 10c.

5609.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3¾ yards of 54-inch material with ⅝ yard of contrasting material. Price 10c.

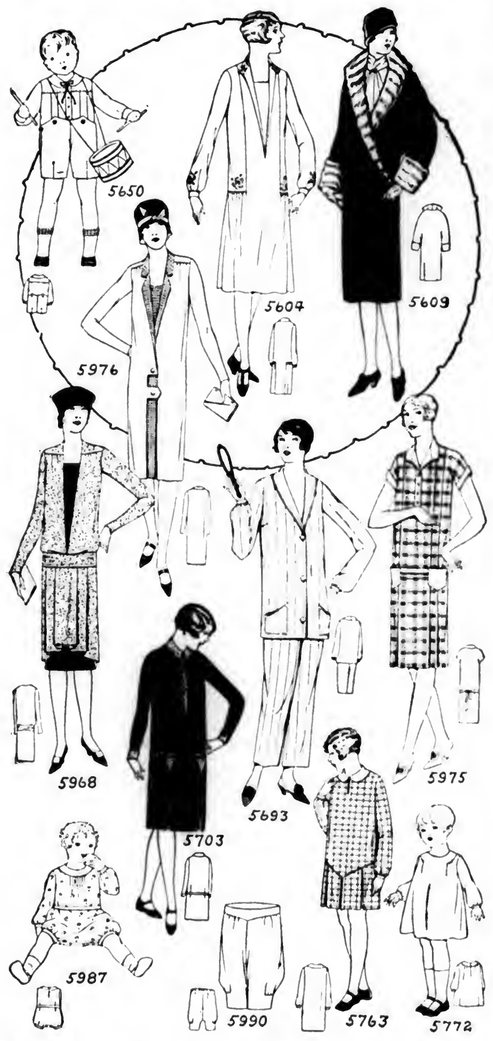
5976.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 40-inch size requires 2⅝ yards of 40-inch material with ⅞ yard of contrasting material. Price 10c.

5693.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4¼ yards of 36-inch material with ½ yard of contrasting material. Price 10c.

5975.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅛ yards of 36-inch material, together with ¾ yard of contrasting material. Price 10c.

5987.—Three sizes: 6 months, 1 year and 2 years. A 6-month size, if made with sleeves, will require 1½ yard of 27-inch material, with ⅜ yard of contrasting material. If made without sleeves 1¼ yard of material is required with the contrasting material. Price 10c.

5990.—Four sizes: small, 29-31; medium, 33-35; large, 37-39; extra large, 41-43 inches waist measure. A medium size requires 1⅞ yard of 32-inch material. Price 10c.



quires 2⅝ yards of 40-inch material with ⅞ yard of contrasting material. Price 10c.

5968.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires ⅞ yard of 32-inch lining for the underbody and 3¾ yards of figured material, and ⅜ yard of plain material 40 inches wide. Price 10c.

5703.—Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 2⅝ yards of 40-inch material with ⅞ yard of contrasting material. Price 10c.

5763.—Four sizes: 4, 6, 8 and 10 years. An 8-year size requires 2 yards of 40-inch material with ¾ yard of contrasting material. Price 10c.

5772.—Five sizes: 1, 2, 3, 4 and 5 years. A 3-year size requires 1½ yard of 32-inch material. Price 10c.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Thanks-giving needs

There has been a mighty change in American living conditions since the first Thanksgiving turkey dinner was served in 1621. Science, American ingenuity and modern methods have made possible practically all of the comforts and conveniences of the finest city residence in the most remote farm home.

One of the important links in the chain of merchandising that brings these things to you is your local "Farm Service" Hardware Store. Before Thanksgiving time comes, with its usual holiday feast and entertainment, you should visit your local "tag" store and select the modern cooking utensils, kitchen helps, cutlery, silverware and such things that will make the dinner better and easier to prepare.

Also, you should ask about a radio set to bring the many wonderful radio programs into your home on that day and all of the others following. You will find everything offered in these stores to be of dependable quality and the best possible values that your money can buy.

Be sure you find a store with the "tag" in the window.

Your "Farm Service" Hardware Men

All of Us Do Not Know These Facts

(Continued from page 3)

much each man should deposit to protect his family. There is no gamble about it. If every man lived until old age there wouldn't be any life insurance. But because life ends early and late and in between, and no mans knows when, life insurance came to protect the families of those who did not live until old age. It is a scientific system, as we have said, and that is why it is safe. "Old line" life insurance has stood the test of time. Nearly all of the huge companies of the country are from fifty to eighty years old, and each year they grow in strength and usefulness.

The business of the companies is closely supervised. Once a year each company must make a detailed report to the Insurance Commissioner of every state in which it does business. These reports are on blanks supplied by the Insurance Departments, and they go down into every item of the business. And the Insurance Commissioners make examinations of the companies at stated times—very often the statute of a state says just how often.

Investments Restricted by Law

Insurance companies are restricted in the kinds of investments they may make, none but the very safest classes being permitted. In addition, they are limited by law in the amount they can spend for obtaining new policies each year. All of this is done for the protection of the policyholders and their beneficiaries. There is no safer business in the country than life insurance.

A large portion of each premium deposit you make goes into what is called the "reserves." A life insurance company has reserves and it has a surplus. The reserves are at all times sufficient to meet every claim as it falls due. But since there is occasionally a panic time, when securities go down in value, or there is occasionally a universal epidemic, the companies keep at all times a surplus. They are required by law to maintain reserves. They couldn't pay their claims unless they had these reserves. The surplus fortifies the reserves and makes it impossible for them ever to fall below the legal requirement.

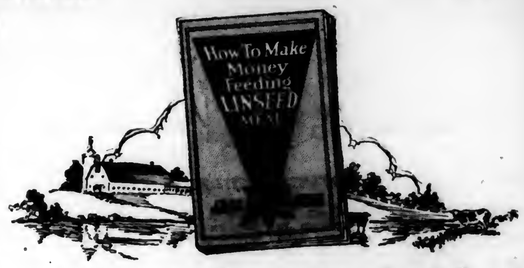
Savings Develop Resources

These vast reserves which the companies hold are not like capital that is put into a business. They are invested—invested in the policyholders' behalf. The millions of little premium deposits that are made through agencies all over the country, are sent on to the home offices of the companies. And they are put together and go out again as investments in government bonds, state, country and city bonds, mortgages of all kinds, public utility bonds, railroad bonds. And so, you see, the savings which the American people make through life insurance are being turned back all the time into the country's daily life, expanding business, building new homes, improving the railroads, developing electric light and gas, helping the farmers to develop their farms and to increase their acres, and, in short, making it possible for the American people to develop all their resources, and to increase their comforts, their employment, and their happiness. There is no kind of organization that is closer to the people than the institution of life insurance.

Editors' Note:—This is the first of a series of articles which we have asked Mr. Anderson to write, explaining for our readers how life insurance work is conducted, and how it benefits the insured.

Thinning Woodlot Pays a Profit

JOHN H. STOLTZFUS, Berks County farmer, thinned one acre of his young timber last winter. He put 70 hours of labor on the job and got 15 cords of pole wood ready to saw. The wood was worth at least $3 so he got $45 worth of wood for his work and has a better acre of young timber. This was his second year thinning and he plans to continue the work every year.



More profit per head with this Free Book

Why work so hard to make a few dollars, when modern feeding methods will do part of the work for you? This free book tells you how to feed dairy cows (and other farm stock) so that each animal yields you a bigger profit, and fewer head are necessary to make a good living. Helps you get higher production out of your farm-grown feeds, through home-mixed rations including Linseed Meal.

This book contains simple, practical rations that work. Thousands of copies in daily use. We will gladly send you one, free! Mail the coupon.

—on a million farms

"Old Hickory Smoked Salt is wonderful. We never had nicer meat and we will never go back to the old method of curing. We have recommended it to all our friends". —*Mr. John Lange, Montevideo, Minn.*

A million farmers, about one fifth of all those who raised hogs in the United States last year, cured their meat with Edwards Old Hickory, the *original and genuine smoked salt*. Thousands of them have written grateful, enthusiastic letters like the above, telling how Old Hickory has saved time, labor, meat and money;—how it has prevented spoilage during cure and done away with the fire risk and excess meat shrinkage of the old method of smoking. But chiefly they tell of that marvelous flavor of genuine hickory wood smoke mingling with the natural meat juices in a delicious blend that only Old Hickory can produce.

You can get the same splendid results and the same delicious flavor by simply replacing ordinary meat salt with an equal amount of Old Hickory Smoked Salt in your own curing recipe. Old Hickory is highest purity meat salt smoked in the open air with hickory wood smoke. Not another thing is added. No smoke-house is needed. For meat curing Old Hickory is packed only in ten pound drums with the trade-mark, exactly as it appears here. Your dealer will show it to you.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Friends:—I am going to tell you about our trip to Harrisburg. We started about 6:00 A. M., went thru Light Street, Bloomsburg, Grovania, Danville, Northumberland and then crossed the river to Shamokin Dam. We went down the river a ways till we came to a small stream called Penns Creek. Here we ate our breakfast which seemed more like dinner altho it was a trifle later than half past seven. There was a roadhouse about 30 feet from where we ate, the name of it being Drive Inn. We left this place at 8:00 A. M.

The next places we went thru were Selinsgrove, Port Trevorton; Liverpool, Half Falls and New Buffalo. Next we went to Armity Hall and here crossed the river to Clarks Ferry. Then we went thru Dauphin and Rockville. Below Rockville we saw the longest stone bridge in the world and here is the beginning of Harrisburg. We see the homes of many wealthy people. We go quite a ways before we see the Capitol at all. Then we see the dome and almost before we know it we are in front of it. We drove around behind it and there parked our car, got out and looked around.

The first place we went in was the library. After we had gone thru the library we went to the main building and there got a guide to take us thru. He told us many things. We were in all the rooms except several which were closed. We saw all but the museum before dinner.

Before dinner I took my sister, who is nineteen months old, around to the front of the Capitol and we looked around to see what we could see.

After dinner we went in the museum which took quite a while as there were so many things to see. When we had seen everything in the museum we rested a while. We started home at about 4:00 o'clock.

We take a trip nearly ever summer. We do not know where we will go next summer as we do not know if we will be living till that time or not. If we go on a trip next summer I think I will tell you about it. That is, if you want me to.—Alta R. Belshline, (X), Columbia County, Pa.

I shall be very glad to hear about the trip you're planning for next year.

THE FORUM EDITOR.

LALIA AND MARGARET DANNER
Berks County, Pa.

Dear Forum Friends:—I live on a rather large farm. We have a dog named Teddy. He is brown and white. He likes me to lead him around. When he sees me with a stick he always comes up and gets hold of it and wants to be led. He follows me everywhere.—Margaret Tindall, Mercer County, N. J.

Dear Forum Friends:—I always like to read the letters on the Forum page but I seldom see any from Union County. I like to milk and feed calves but best of all I like my pony. I ride him when I go after the cows. We also have a little truck wagon.

I'M HOLDING THE BRIDLE
Martha Herman, (X), Union County, Pa.

My sister and I hitch him up and haul different things. We helped haul wheat and oats. I also raked the hay and wheat with him. I will send you a picture of the pony and us. I am standing at his head. The smallest girl on the pony is my sister.—Martha Herman (X), Union County, Pa.

Dear Forum Editor:—I have been reading Pennsylvania Farmer ever since I can remember as dad has taken it quite a while. My brother, Ivan, was down to Philadelphia this spring and he says it is a very nice place.

We have dogs, hogs, cows, chickens, turkeys and horses and my two kittens. We live on a farm. We sell milk. We have to have it down at the road every morning at 8:00 A. M. I hope to be a member of this big circle. I will write again soon.—Gladys R. Means, (X), Bedford County, Pa.

Dear Forum Friends,—I live on a 93-acre farm. My mother is not very strong so I have several household duties to perform every day. We have a large lawn in front of the house on which I play and romp and run after my daily chores are over.

For pets I have a small fox terrier dog which we call "Mac," a little Airedale puppy, called "Airy," a big black tom cat, called "Beady Eyes." We call him this because his eyes look like beads and are very shiny. We also have another cat named "Fluffy."

We have a radio. I like, especially, stations WRI, Washington, and WJZ, New York. I will write later on and tell you of a club of which I am president and about the tricks of my dogs.—Clara Long (X), Baltimore County, Md.

Have You Joined the Hunt?

DEAR FORUM BOYS AND GIRLS:—If all of you haven't read about our Treasure Hunt, you'd better look up last week's issue (November 12) and turn to the Forum page. There you will find a list of sentences and all the details of the Hunt. All contest papers must be postmarked not later than November 19th. Address your letters to The Forum Editor, 261 S. 3rd Street, Philadelphia, Pa. Who do you think will capture the prizes this time?

Have you been reading the announcements on the Forum page about the Colonial History Quilt? Each quilt block depicts a historical scene and if you enjoy quilting I'm sure you'd like to make one.

THE FORUM EDITOR.

PALS
Margaret Christman, Franklin Co., Pa.

You Might Have a Quilting Party

LAST week there appeared on the Forum page an illustration of a block for a Colonial History Quilt. This was but one of 20 blocks included in our Colonial History Quilt Pattern. A quilt of this design makes a very practical Christmas gift or, perhaps, you may want to make one for yourself. You will become attached to the characters shown on this quilt, for they tell the story of our country. Each block is 8 inches square, and comes on a hot-iron transfer pattern by which you can stamp the design on a square of white muslin. The block is then embroidered in outline stitch, and the 20 set together as pictured on page 16 of our issue of November 5th. The 20 hot-iron transfer patterns in one package, with complete instructions for making will be mailed postpaid upon receipt of 50 cents. Address orders to Editorial Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

DEAR LITTLE FOLKS:—We have a wise old owl at the head of Our Little Folks' Puzzle Corner, and I often wonder what he thinks of all the merry times we have here each week. But he looks as if he enjoyed having the Little Folks frolicking about, and I wouldn't be surprised if he knew many things about us all. One thing he prides himself on is that he often knows about things before they happen. And he tells me that he knows what most of us will be thinking about on Thursday, but he wouldn't tell me what it was and he didn't say which Thursday. But I believe if you will cut out the eight irregular piece of white with black marks on them from the dotted space below and turn them about until they fit together you will find out what it is he thinks you will be thinking about on Thursday—you might even be able to guess which Thursday and what made him think of it just now.

When you have this picture pasted together let me have your answer so that it reaches me by November 26—two days after a certain Thursday. You may send your answer on a postcard or in a letter, but don't for one moment imagine that I am as wise as the old owl and that I can guess who sent the answers. Of course, I need to know what your post office address is, in what county you live, how old you are and when your birthday comes.

You don't have to do anything to join this circle but come in and enjoy yourselves making out the puzzles. If any of you have ideas about what you would like to have in this corner, I'll be glad to have you send them along.

The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the October 29 issue (the one about the box lanterns certain Little Folks had made for a Hallowe'en surprise) is: WILLIAM, CAROLINE, HENRY, GRACE, FLORENCE, THOMAS.

The prize winners are: Paul Vance Bolton, age 8, Pottstown, Pa.; Helen Garbrick, age 12, Bellefonte, Pa.; Donald Edgar Kahle, age 10, Knox, Pa.; Mary Grace Leaman, age 7, Bird-in-Hand, Pa.; Ray Muir, age 9, Blairsville, Pa.; Betty Parks, age 10, Parkton, Md.; Editha Peters, age 10, Wajwallopen, Pa.; Janette Stevens, age 7, Greencastle, Pa.; Morris Way, age 11, Port Matilda, Pa.; Mary Wheaton, age 8, Bridgeton, N. J.

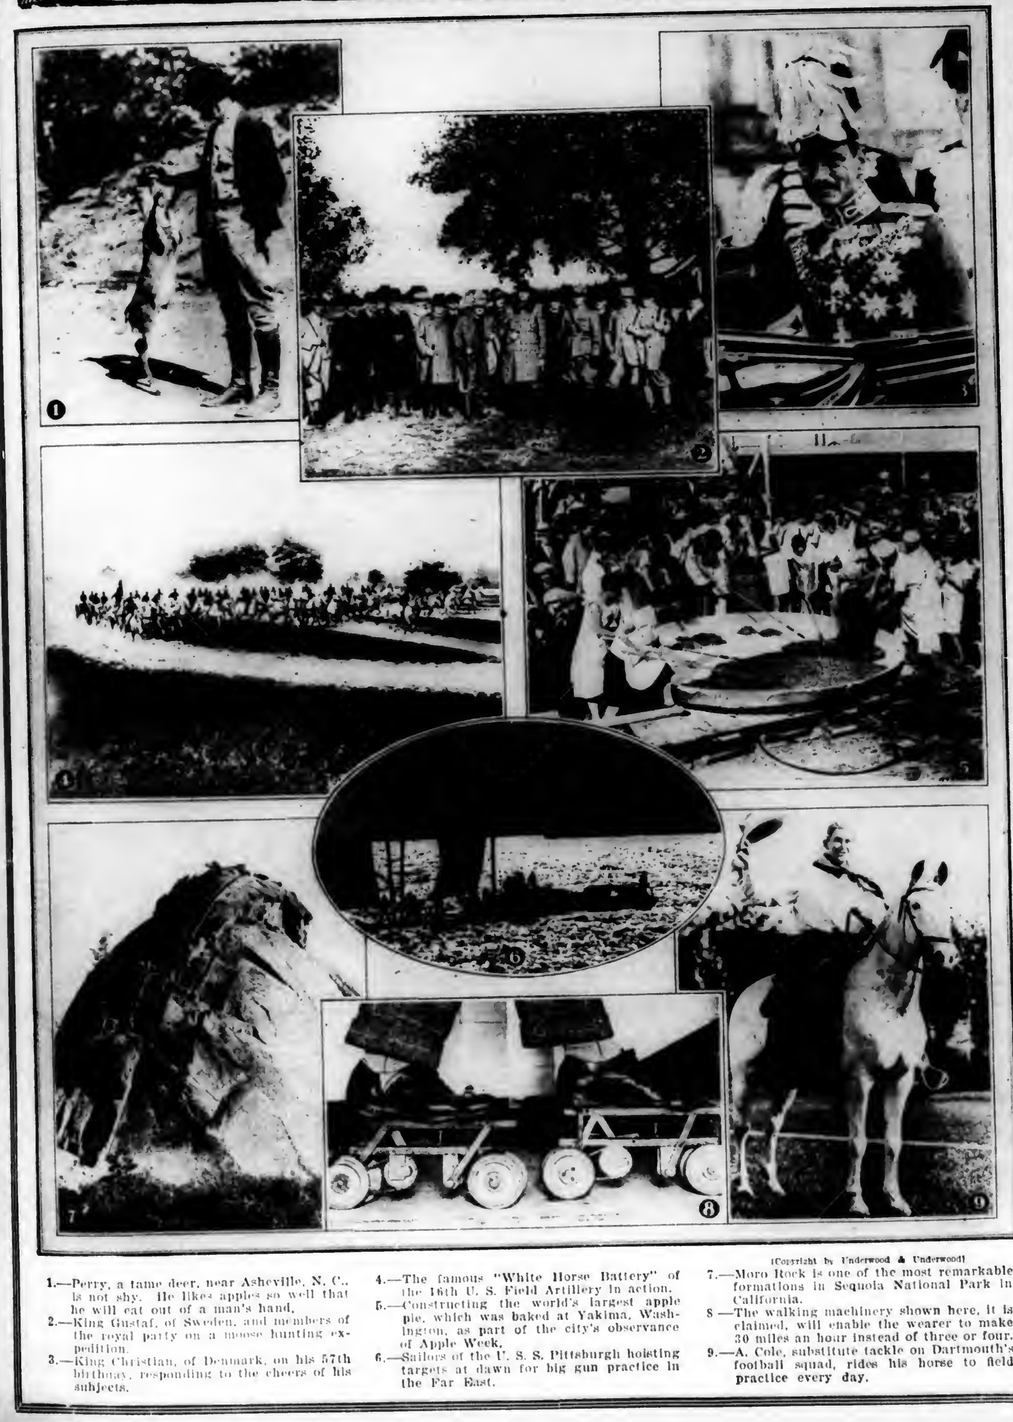
PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—Perry, a tame deer, near Asheville, N. C., is not shy. He likes apples so well that he will eat out of a man's hand.

2.—King Gustaf, of Sweden, and members of the royal party on a moose hunting expedition.

3.—King Christian, of Denmark, on his 57th birthday, responding to the cheers of his subjects.

4.—The famous "White Horse Battery" of the 16th U. S. Field Artillery in action.

5.—Constructing the world's largest apple pie, which was baked at Yakima, Washington, as part of the city's observance of Apple Week.

6.—Sailors of the U. S. S. Pittsburgh hoisting targets at dawn for big gun practice in the Far East.

7.—Moro Rock is one of the most remarkable formations in Sequoia National Park in California.

8.—The walking machinery shown here, it is claimed, will enable the wearer to make 30 miles an hour instead of three or four.

9.—A. Cole, substitute tackle on Dartmouth's football squad, rides his horse to field practice every day.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

AS I wandered around, I saw that the number of rifles was few. There were some trade guns, awkward affairs, hardly more than a barrel fastened to a clumsy stock, an old blunderbuss or two and a number of muskets. Some had stout staves, and a number of poles with scythe points fastened to the end like spears. But by far the greater number had no arms of any kind.

While I was idly gazing about, a hand fell on my arm. I looked up to see Krafft. He shook hands with me fervently.

"I thought they'd scragged you, sure," he told me. "That made another account to settle today or tomorrow. How did you get free?"

I told him briefly and went on to ask of his own mission.

He frowned at that. "I got to Hunter as fast as a man could," he declared. "There was time, then, if he had sent some men at once. But there was arguing and fooling around, and by the time they started the word came from Salisbury that our powder and Waddell's was all gone up in smoke."

He paused and looked gloomily over the groups among the trees. "There's the men," he declared and waved his arm. "Where's the general? Who's to show 'em how to fight? For that matter, what've they got to fight with? I tell you these men don't know yet what they're in for."

He spat to show his disgust. "Look at that. A fight coming and what are they doing? Horse racing!"

So they were. A space a half mile long in the road had been cleared and three men, riding close to their mounts like monkeys, were lashing their horses down the lane. The crowd closed in behind them as they dashed past. Presently, with the race over, the crowd broke into small groups and then we saw, cantering towards us, one of the riders in the race. As he came nearer I recognized him.

"Jennings," I cried. He nodded and came toward us.

"I'd 'a' won it, if I could have whaled one jump more out of this critter," he admitted. "But durn 'em, they put a boy on that bay and my boss had to carry thirty pounds more weight. However, I'll git my money back someway. They're getting up a shooting match. Come over and watch me drive nails."

We followed, altho Krafft snorted his disgust. Over a few yards from the roads, a dozen men in buckskin were gathering. A jolly looking farmer seemed to be the master of ceremonies.

"Eight shillings, proclamation money, to get in the shoot," he cried. "Each man gets three shots. The man who drives the most nails takes the pot. Six gentlemen have already contributed. Who's next?"

By this time, Jennings had got rid of his horse and picked up his rifle. He came up and squinted at the other contestants. Then he turned to the referee.

"How far?" he asked.

"Forty paces."

"Boy's work," grumbled Jennings. "But I'll try it, tho it ain't no distance for a full-grown man. Here's the money."

A good sized nail with a square head was driven in a hickory, at about the height of a man's head. The referee stepped forty paces and drew a mark in the turf. The marksmen lined up to shoot in turn.

There were no muskets or trade guns in the hands of any seven, you may be sure. All had long Decker rifles, and each took his time about measuring out powder for the first charge. Jennings grumbled to himself as he thrust home powder, bullet and patch.

"Eyes are getting a little weak," he said. "I can still bark a squirrel and shoot fair to middling at a mark, but I can't quite—"

"What's barking a squirrel?" I asked.

"Where was you raised, boy?" he asked. "A good hunter don't mess up a squirrel by shooting him thru the head. Nope. He shoots just a mite below him, the bullet hits the tree so durned hard it knocks the squirrel off. You pick him up before he wakes up. Sometimes he don't wake up at all."

I wondered if he was joking and looked at Krafft. He nodded. "I've seen it done," he declared. "No sense in it particularly, but it is fancy shooting."

The marksmen were ready. The first man stepped up to the line, stiffened and fired. Some one ran to the tree.

"An inch to the right and high," he called back.

The next put his bullet alongside the nail. The third bent it slightly, the best shot yet. The other three hit close, but did not touch it. Jennings fired and followed up his own shot. He came back shaking his head.

"To the left," he commented, "and about the thickness of a squirrel skin away."

"GOOD shooting," I commented, but he looked at me with scorn.

"There's two more done better," he complained. "I want that money. Got to even up for that horse race somehow."

The next round the man who had bent the nail took the longest to fire. After the shot, the observer ran up to the tree.

"Can't find it," he reported at first.

"Drove it," exclaimed Jennings and slapped his knee. "Now I got to start shooting."

It was what had happened. The nail, hit squarely, had been driven back into the tree. A new nail was driven in. The other marksmen hit close but failed to touch it.

Jennings was confident as he stepped forward. "Got her fixed now," he told me. "There was just a bit more breeze than I figured on. Watch this."

He took a quick aim and fired. The observer raised a shout.

"Drove it!"

Things looked bad for Jennings, however, when the other expert bent the nail for the second time. That gave him a score of one dead center, and two on the edge. Jennings had one clean miss, tho, a close shot and one center.

JENNINGS made them wait when his turn came. He decided suddenly that the charge wasn't right, and drew powder and ball. Then he carefully selected a new bullet, measured out a new allowance of powder and tamped them home. He aimed a long time. Then the rifle spoke. Jennings turned away instantly.

"That did it," he claimed confidently. "Hand over the cash."

The referee looked puzzled. Then from out in front came the sing song report of the observer.

"Drove it."

"Course I did," said Jennings cheerfully and pocketed the prize.

We turned away. Krafft pointed.

"There's Hunter."

He had just ridden up. Some of the farmers gave him a friendly greeting. Some seemed hardly to know him. Certainly there was nothing here of the reception of a chief by its army.

Krafft stepped forward and put his hand on Hunter's bridle.

"Here's your army," he announced, but added sardonically. "Who's to command 'em?"

Hunter flushed and looked uneasy. A score of men had heard the question. Then he said loudly

"We are all freemen here. Each commands himself."

There was a sort of cheer at this. Krafft gave a sour look and walked off. Hunter had noticed me, however.

"You came with the powder, didn't you?" he asked. "Is your name Craig?"

I told him yes.

"Your uncle is due here in a day or so. I have word from him. He is bringing a score of hunters from over in the Cherokee country."

They rode on and I went back to find Krafft and Jennings.

Each of them had a bag of corn meal, some salt, and some jerked meat. We built a fire, baked corn pone in the ashes and made out a meal. I contributed nothing, a fact that worried me, but the others would not hear of my hunting provender elsewhere.

"If this gang of outlaws hadn't scared the game from here to the hills, I'd go out and get ye something tasty," Jennings told me.

Late in the afternoon, we saw men getting together along the road. There was an excited buzz of talk, and then the groups broke up and spread out again. We stopped one man who had just come from the gathering.

"What's up?"

"Tryon's still in camp. Getting ready to move tomorrow they say."

We looked at each other soberly.

"Tomorrow morning will tell the story," said Krafft.

We were all uneasy, I think, and anxious for an excuse for action. So when Jennings suggested that we make a tour of the camp, both Krafft and I assented. We went past camp fire after camp fire, deep into the woods.

"How many do you reckon?" Jennings asked.

"Two thousand, maybe more," Krafft assented. "Hard to tell. No guards out, I'll bet."

"You Jose," retorted Jennings. "Somebody's out there in front anyway and making as much noise as a herd of cattle."

He pointed to the woods ahead of us and to the right. We were already on the right flank of the movement. Sure enough, when we listened we could hear the sound of men's voices from that direction. We pushed on.

In less than ten minutes, we came to a small clearing. Twenty men were gathered in a circle about the trees in the center. They were packed so close I could not see what was happening. Then I caught a glimpse of a swinging arm and heard groans. Still I did not guess. Krafft was quicker.

"GIVING somebody a whipping," he explained. "Let's see."

We pushed thru the crowd, dodged around, following the line of least resistance, and came out by the fire. Across it, I could see the two trees about which the men were gathered. To the nearest tree, a man was tied. His face was to the trunk and his wrists were lashed together beyond it. His shirt off and blood oozed from cuts across his bare back. By him lay what was left of a military coat.

The man tied to the next tree was in the same plight, except that his ordeal was not over yet. I could see the jaw muscles swell out as the whip bit down into his back, for there was no crying out. And the man with the whip was laying it on hard.

This much I saw in an instant, and then I heard Krafft's roar:

"These men are prisoners. Stand back."

The butt of his rifle rose and came down with a crack on the skull of the man with the whip. Then he had reversed the rifle and was facing the crowd. Jennings squeezed into place beside him and I jumped the fire, fumbling with my pistol as I came.

It was easy to see that our interference was unwelcome. A big fellow with a broken nose—I knew him for the man who wanted to whip the deputy sheriff when we rescued Butler—pushed forward. The other men were daunted for a moment, but there were plenty of hands put to belts.

"What put in is this of yours, Mister?" asked the big fellow. "We captured those fellows and we aim to do what we like with them."

"Regulators whip scoundrels," replied Krafft scornfully, "but not prisoners. Whip Fanning or Frohawk if you want to and catch them. These men—"

HE stopped to ask a question of the bound man behind him. I could not catch the reply.

"These men are officers of the militia from the seaboard. Save your lashes for the men who deserve them," Krafft finished.

This did not go down well. I counted five pistols out and there were a dozen hands on knife handles. I shivered and wished myself elsewhere.

"Who told you to take charge?" insisted the man with the broken nose. "No Dutchman—" have I said that Krafft spoke with an accent?—"can give us orders."

Jennings took a step forward, dropped his rifle butt to the ground, leaned on the weapon and gazed up into the big man's face with the friendliest expression in the world.

"Now, that's what I call a fair question, folks," he declared. "We was just waiting for somebody to ask that, but seems like our big friend here was the only feller bright enough. Why just an hour or so back, here comes Jim Hunter and tells us to scout around and find out if the governor's got any spies out. And here we come and find you've done the job for us. That's fine. Now I expect Hunter and the rest will be pretty anxious to talk to these spies and to set up drinks for the men that found them. So my guess would be that you fellows will be moseying along that way mighty quick to tell the rest of the camp that you're a durned sight smarter scouts than what we be."

Before he was half thru, there were laughs from the crowd. As he finished and stepped back, the crowd, changeable as only a gang of drink-filled men can be, swept up to the trees, cut the two men loose and bore them away. Jennings turned to Krafft.

"That was close," he said. "You stick with them. They're safe enough now, I think, but in case they start some more monkey shines, slip ahead and tell Hunter."

He put his hand on my arm. "Me and this lad are going to scout around a bit ourselves. If Tryon can spy on us, I don't see why we can't spy on him."

As we started out, I protested that I had no rifle. Jennings scoffed at me.

"We aren't doing any shooting this trip," he explained. "I'm just taking my piece along for company."

INSTEAD of following the road which led straight to Great Alamance Creek, Jennings led thru the timber to the right. We struck a woods road presently and followed it to a creek and a ford. Pressing on due southwest, we came presently to a more important highway running in a northerly direction. This we followed until we heard a stream again on our left, when Jennings turned to the right into the bottom land again and found another creek and a way to cross it.

Over this, we drove straight thru a patch of timber, came out on another road, crossed it and went thru woods again. This time we found a stream but no ford. It was shallow enough to wade, however, and we came out of it to climb a little stretch of upland and then plunge back into the woods again. One more stream we crossed, this one the largest of the lot, and then came presently to a road running due north.

"This is the one we're looking for," commented Jennings with satisfaction.

I said I was glad, and meant it. Meanwhile I sat down by the road to clean red mud off my boots. It had been an exhausting trip, thru swamp and brush and stream.

There was no rest yet, however. We set out at a brisk clip along the road. Presently we heard running water ahead and made out a wooden bridge.

"Stinking Quarter," commented Jennings. "This is the creek you been wading thru all right—this or little creeks that feeds it. Now if Tryon is the general he thinks he is, there'll be a man or two keeping an eye out here."

He bade me wait and crept up to the bridge from the side. He was out of sight as soon as he slid into the grass and I heard nothing for a long time. Then someone came striding over the bridge.

"Come on, lad," called Jennings cheerfully and loudly. "Nobody within five miles."

From there we followed the road a few rods. Then to my dismay we struck again into the timber. In fifteen or twenty minutes we came out on a little knoll. Jennings pointed thru the branches of the trees on the slope below us.

"There he is—hoss, foot and artillery."

In the distance a hundred camp fires glowed. For a camp at midnight, there was a mighty stir. I could hear commands, the tramp of columns, a series of sharp challenges.

"He's marching now," cried Jennings, and then corrected himself. "No horses tho. He wouldn't start out without his guns. I can't hear harness creak."

"Changing guard," I guessed. "But he must have half the army on guard. What a noise they make!"

As I learned afterward, my guess was right. Tryon had put one-third the entire force on guard at a time, and had changed guard every two hours. What a contrast to the unwatched camp of the Regulators! I made this comparison as I watched the flickers of fire light on musket barrels, in the camp across the river, and drew small hope from it for the morrow.

"Roll over and take a nap," Jennings advised. "I'll keep an eye on them. As soon as they start hooking up, we'll light out and make for camp."

I was dog tired and never slept sounder. A gray sky was over me as I woke, and birds were active in the tree overhead. Jennings quit shaking me.

"They been marching up for grub the last half hour. Now they're getting the horses harnessed up. Time to go, lad."

I took a quick look at the encampment. There was bustle everywhere, but the tents still stood and the wagon trains were not being lined up for a march. I pointed this out to Jennings.

"Leave 'em behind, of course," said he shortly. "Tryon's not such a fool as our fellows think. Now we'd better run for it."

RUN we did, at a dog trot, down thru the timber, and came to the main road in a few minutes.

"Ought to be a scout out somewhere," muttered Jennings. "There —back with you."

There was a cross roads ahead and at it two mounted men stood guard. They seemed to be alone. Fortunately they were looking the other way.

"Probably a bigger bunch back a little ways," Jennings guessed. "Well, two is easy. Here, you wait for five minutes, no ten. Then start down the road easy and free. When they challenge you, tell 'em you've got an order for them from the colonel or the major or somebody. Keep 'em interested.

I asked what he planned. Jennings only grinned at me.

"I've done all the walking I reckon for this night," he declared, and with that left me.

For a moment I had half a notion to strike out thru the woods by myself. To walk down the road seemed a foolhardy trick, regardless of what Jennings had in mind. A patrol might overtake me as I parleyed with the outpost.

Yet I could hardly desert Jennings.

It was hard to gauge the time. I counted up to five hundred after I was sure I had waited long enough, and after that figured that I had given Jennings plenty of leeway.

Then, with a great hollow feeling at my stomach, I stepped out into the road, and whistling, sauntered in as carefree a manner as I could muster toward the cross roads.

I was seen almost at once. One of the mounted men made as if to ride toward me, at which my heart almost stopped. Fortunately, he thought better of it and turned back. I thanked the officer who had given such positive instructions to watch the cross roads. Of course, I had the advantage that I was approaching from the camp of friends.

The Progress of Agriculture Portrayed

Editors' Note:—We believe that the following description of the pageant held under the auspices of the County Agent in Schuylkill County will be a suggestion to farm organizations in other counties. The interest shown by the rural people in this event proves that it was well worth while. Agriculture needs the stimulus of such gatherings.

AN APPROPRIATE climax to ten years of work of the Schuylkill County Farm Bureau was held on the Fair Grounds at Cressona last summer with a Farmers' Field Day and Pageant of Agriculture.

The day dawned clear and cool, an ideal field day. Early in the morning farmers from all parts of the county began to arrive. Everyone was prepared for a good time. By ten o'clock several thousand farmers with their wives and children gathered on the grandstand to watch the sport events of the morning. Among these were running races for boys and girls, a shoe race, a relay race for boys, and tugs of war between the men of different Granges. A final tug-of-war was held between winners of the preliminary tugs. These tugs of war were quite exciting, as each community sat with bated breath hoping for their side to win.

Singing Contest Held

An enjoyable event of the morning was a singing contest among three rural choruses. Each of these choruses was given the same three songs and was privileged to make its own interpretations. Amplifiers were used to broadcast the whole day's program to the audience, and made the singing contest audible. One of the choruses made a very attractive appearance in white sailor suits.

At noon, family reunions were held and farmers from different sections of the county, who had not met for a year, greeted each other over their coffee cups.

By 1:45 every seat in the grandstand was filled and the crowds overflowed the paddock. The farmers had

turned out 6000 strong to see the Pageant of Agriculture. The sun added resplendency to the stage with its crescented cluster of white columns wound with green vines and topped with gold urns containing ferns. A throne in the center was backed by an immense screen on which a beautiful rural scene was painted.

The Reader of the Pageant advancing, took his place beside the choir. Then trumpets were heard as two heralds announced the approach of the Queen of Agriculture.

Episode One portrayed the Ancient Religion of Agriculture. The Spirit of Religion took her place on the Low Throne to review this Episode. A high priest and his followers entered bearing a sheaf of wheat, a dish of fruit, a jar of oil, a sheeppelt and various other offerings for the altar. They were followed by twenty-four small, barefoot girls dressed in white, strewing daisies in their path. A pretty scene was made by ten maidens on either side of the sacred white heifer, holding long ribbons which were attached to the heifer by a chain of daisies. The heifer drew a plow which turned the sacred furrow. The high priest lit an altar fire and blessed the offerings and the ground and prayed for prosperity for the coming year. The populace then followed the plow from the field, each person taking a handful of the sacred soil to be carried home and scattered over their fields. Upon invitation of Queen Agriculture, Religion took her place on the right of the Queen.

Science Reviews Corn Dance

The Heralds then trumpeted and the Spirit of Science advanced to the Low Throne, there to review an Indian Corn Dance. A score of bronzed and painted Indians advanced in single file to the field and upon a sign from their chief began to sing and dance, portraying the ceremony of the beginning of the planting season.

The Peace Pipe ceremony was interrupted by the appearance of an early settler's scout on horse-back who advanced, dismounted and gave a sign of friendship to the chief. A covered wagon lumbered in, followed by several men and boys on horse-

(Continued on page 22)

Are your cows *breeding* regularly?

OR, ARE they slow in settling? If so, you have a stable full of strippers that are not paying their board, when you should have a lot of fresh, heavy-milking cows that boost the milk check when most needed.

Slow breeding in heavy-milking herds is the cause of heavy losses to the dairyman. It is due in many cases to improper feeding. The cows come in season regularly, but do not get with calf. They are barren for a long time and are finally sent to the butcher—a total loss so far as breeding qualities are concerned.

Thousands of forward-looking, business-dairymen who appreciate the importance of regular breeding, as well as heavy production, feed UNION GRAINS exclusively. They know that in the ebb and flow of dairy farming over the past twenty-five years UNION GRAINS has stood the test. They know, by experience, that UNION GRAINS is palatable, that it maintains a heavy flow of milk, and they also know that UNION GRAINS keeps the dairy cow in the pink of breeding condition throughout the year.

UNION GRAINS keeps the cows, as well as the milk check, up to a high level. "A heavy yield and a calf every twelve months" is their slogan. No "bullers" or cows that fail to breed in a herd fed on UNION GRAINS. Why? Because UNION GRAINS is made right. Its ingredients, from a variety of sources, provide the proper nutritive protein balance that has proved necessary for the high producing cow.

Feed UNION GRAINS to keep your cows on a regular breeding schedule and milk flow at its maximum.

UBIKO *Dairy Service Bulletin* Free

We will send our new bi-monthly publication, the "UBIKO Dairy Service Bulletin," regularly to dairymen who ask for it. Each issue will contain a helpful article on some phase of dairying written by a recognized authority—also other up-to-the-minute information regarding feeding, health, etc. Write today.

The Progress of Agriculture Portrayed

(Continued from page 21)

back. The wagon stopped and men, women and children dressed as early settlers emerged from it and unloaded their agricultural implements. The Indians, after watching this amazing spectacle, led the scout and covered wagon off the field to find water. Then the settlers gave an exhibition of primitive farming using wooden plow and brush harrow, sowing by broadcasting, cutting with sickles, raking with wooden rakes and flailing. As the settlers worked they sang the old Pennsylvania German song, "Hi-he—Hi-ho." Work was stopped and the farmers hurried from the field when the dinner bell was heard ringing in the distance.

The Corn Husking Bee, a social phase of farm life as it existed in Schuylkill County, was one of the most amusing interludes.

Invention Then Entered

The Reader called forth the Spirit of Invention in the following manner:

"Let now invention come
With magic powers,
Lightening man's load of toil
And giving wings to hours.
Of all who serve our Queen
None is more welcome here,
Invention, take the stage
And let thy works appear."

Invention preceded a line of farm implements including tractor pulling plow, disc cultipactor, spring-tooth harrow, potato planter, weeder, cultivator sprayer, hand duster, elevator digger, grader and also a tractor pulling hayloader and side delivery rake. After exhibiting before the grandstand they passed from the field. Science and Invention joined the Queen's court.

Interlude Three was an old-time singing school. The comical old singing master entered with his lantern and lit it.

Grange Showed Organization

Again the Heralds trumpeted as the Spirit of Organization walked to the Low Throne. The Grange then took the stage and showed how their organization secured the Rural Free Delivery of mail through an appeal to the government. An old rural mail carrier on horseback entered and placed mail at different rural boxes. Then a modern touring car filled with parcel post entered and showed present-day delivery. Comedy was added to this scene by the delivery of several boxes of baby chicks and auto tires.

Education then entered and joined Organization. A group of farmers came in followed by the County Agent in his auto.

A Farm Woman entered, followed by Drudgery, Inconvenience and Isolation. These three characters bound her with their ties until she appealed to the Queen. Sixty farmer lads and lassies entered. They displayed banners portraying Farm Improvement, Home Conveniences and Community Improvement through Boys' and Girls' Clubs. They cut the ties of Drudgery, Inconvenience and Isolation and the Farm Woman ascended to the throne as the Queen welcomed her.

The Spirit of Cooperation approached, followed by sixteen young men. They proceeded to build an ideal community for the future of agriculture. The foundation was built of the four essential stones: Health, Education, Religion and Recreation. The platforms of Citizenship, Farm Business, Farm Home and Community Life were then laid on this foundation.

Miss Laura Reynolds, Home Economics Extension Representative in the county wrote and directed the Pageant assisted by W. R. Gordon, Rural Sociology Extension, State College, and W. L. Bollinger, Schuylkill County Farm Agent. The Pageant was a huge piece of work and its production was possible only because everyone who was asked to cooperate did so with a cheerful, willing spirit.

Jersey's R. O. P. Work Now Under One Head

THE Poultry Department of the New Jersey Experiment Station has taken over the record of performance work formerly carried out by the State Department of Agriculture, Trenton, under the direction of Alben E. Jones. This centralization of activities brings under one head all of the R. O. P. work conducted at the two egg-laying contests and the trap nesting work on the farms of the members in the newly-formed Record of Performance Association of New Jersey.

Under the new arrangement, which was suggested by Secretary of Agriculture William B. Duryee, Prof. Willard J Thompson, head of the Poultry Department, Experiment Station, New Brunswick, will supervise all trap nesting work at the egg-laying contests as well as those being carried out on the farms of the state.

Parker I Tappen, New Brunswick, has taken over the detail work of the new Department for Prof. Thompson in connection with the R. O. P. breeders.

Alben E. Jones, Department of Agriculture, who previously has had charge of the home R. O. P. work, will now devote his entire time to blood testing and poultry certification work. The rapid expansion in this latter field has taken so much of his time that it was leaving but little for other important matters.—A. K.

Annual Dinner Held at Vineland

THE Vineland Cooperative Poultry Association held its annual dinner on November 16 in the Masonic Hall, Vineland. This is one of the largest poultry associations in the East, with a membership of nearly 500 active poultrymen who are engaged in the production of white eggs for the New York market.

The date for the annual Vineland poultry show has not yet been set as there is still some question about securing a hall large enough to accommodate the growing list of poultry exhibitors.—A. K.

Makes a Hard Task Easier

SPREADING manure as it is produced insures that none of the plant food will be lost. Instead of putting the manure on the pile, place it in the spreader and get it onto the fields as fast as possible. The spreader gives a more even distribution and makes a hard, disagreeable job comparatively easy. The manure spreader saves time and exertion.

Eastern States Farmers' Exchange

Cooperative Buying Pays

Sixty-six Massachusetts herds will be placed on the National Dairy Association's roll of honor this year as these 66 herds during the year ending July 1, 1927, have succeeded in averaging per cow in their respective cow test associations for a full 12 months 300 lbs. butterfat or more. Of these 66 herds, 37 received Eastern States grain—more than half—and the owners of 31 have contracted with their Exchange for dairy feed for the present year. The Exchange records indicate that 70% of the feed and grain tonnage used by its members is ordered on contract. The records indicate that 84% of the Eastern States members on this roll of honor from Massachusetts are securing their grain requirements on contract.

The 4 leading Massachusetts herds were all fed Eastern States grain and all 4 herd owners have contracted for their 1927 supply. The leading herd, 17 pure blood Guernseys, belonging to Unkamet Farm, Pittsfield, Mass., produced an average of 443 lbs. fat per cow. Thomas Dyer's 13 Jerseys from Springfield, Mass., were a close second with 439 lbs. fat per cow. Of the 10 herds which averaged 400 lbs. fat or more, five were Eastern States fed.

Where records are kept, Eastern States Open Formula Feeds prove their worth.

Massachusetts, New Hampshire, and Vermont are the only states in New England in which cow test records are available for this year's National Dairy Association's roll of honor. In Massachusetts 66 herds qualified and 37 were Eastern States fed. In New Hampshire 8 herds qualified and 7 were Eastern States fed. In Vermont 98 herds qualified and 57 were Eastern States fed. In Massachusetts the 4 top herds were Eastern States fed; in New Hampshire the 7 top herds were Eastern States fed; and in Vermont the 3 top herds were Eastern States fed.

With dairymen the purchasing of grain is a means to an end. The end is to secure the greatest net profit possible from the dairy enterprise with due regard for the cost of making milk, of growing young stock and of maintaining the general health of the herd. Cow test association members have records which give them more accurate information than other dairymen. It is significant that so large a portion of the leading cow test association members in Eastern States territory are standardizing on Eastern States feeds. It indicates that their records have convinced them of the value of the selective buying service their Exchange is performing for them.

For information on the Eastern States feed service for horses and poultry as well as dairy cattle, the service which should not be confused with ear door service offered by manufacturers through dealers or groups of farmers, write the office.

Eastern States Farmers' Exchange

Rambles of a Pennsylvania Fruit Grower

(Continued from page 9)

those grafted or budded in the nursery.

Willamette Valley cherries produce two to four tons to the acre. Some individual trees have produced 8000 to 9000 pounds each. The price at the cannery has been eight to nine cents a pound. Most of the Royal Anns are canned. The other varieties are shipped as fresh fruit to the markets of the East. The cost of picking is one and a half cents a pound. Other cash costs are two to three cents a pound, so that the total cost of production, including overhead, is around six cents. I met one grower who netted $1600 on less than three acres last year. All agree that the cherry has paid better than any other fruit. Apple growing is a declining industry here.

Flavor, Color and Shape Valuable

This is an excellent small fruit territory. Oregon strawberry growing centers on the canned varieties. There are districts where hundreds of acres are grown solely for the cannery. To be valuable for canning, a variety must produce heavily, have a tart flavor, red flesh and keep color and shape well in the can.

In this humid climate it is necessary to grow all varieties in hills, the runners being cut off as fast as they appear. I saw Ettersburg plants that yielded six to eight pounds each and fields that ran three to four tons an acre. These hill plants do not bear their heaviest crop until the second or third bearing season and are commonly cropped for five to eight years.

There are 6000 acres of loganberries in Oregon, and the acreage is increasing. This hybrid between the European raspberry and the Pacific Coast dewberry is not hardy in Pennsylvania. It is grown on a trellis like grapes. The canes, eight to twelve feet long, are twisted on the trellis, forming the figure eight. Yields of four or five tons an acre are common. There is no spraying, and no Mosaic or other degenerative disease. Practically all the berries are canned, for use in pies. A few are turned into juice and jelly.

Disease Does Not Attack Species

The Evergreen blackberry, a European species unknown in the East because it is tender, is grown in much the same way. The plants are remarkably vigorous and the canes, which are ten to eighteen feet long, are viciously thorny. No disease attacks it, nor any insect pests. Fifteen-year-old plants in the Willamette Valley look good for fifty years more, at least. The yield is four tons or better and the cannery price last year was six cents a pound. I met one grower who said that he nets $400 an acre. This berry has escaped from cultivation and grows wild in some parts of Oregon. In New Zealand it has become a pest.

I was interested in experiments on the preparation of fruit juices, at the Oregon Agricultural College. Millions of dollars are spent in the United States each year for worthless synthetic drinks, or "pop." These have practically no food value, except the small amount of sugar in them. This industry has expanded tremendously since prohibition went into effect. If at that time the apple growers of the country could have united to put over apple juice as a national drink instead of "pop," it would have been a blessing to everybody concerned. The main difficulty, aside from lack of cohesion within the apple industry, is that apple juice, and any other fruit juice, must be pasteurized, while it is not necessary with synthetic drinks.—S. W. Fletcher.

Birth of a Sprinter

"What steps would you take if you saw a dangerous lion on the campus?"

"Long ones."

Get Rich Quick

The topic of the Sunday meeting of the society will be "Learning to Prey."

Now is the time to think about your Brood Sows

Give the brood sow Quaker Pig-N-Hog Meal and you give her exactly the things she needs to build you big, strong, healthy litters. For this meal is in a class by itself, containing *everything* that you know is good for the sow and her young. There's *tankage! oatmeal! alfalfa meal! barley! hominy! wheat flour!* and *iodized salt* (to prevent goiter troubles) and Cod Liver Meal to provide valuable vitamins. Build yourself big litters—save every pig. That's the foundation for the best pork profits you've ever realized.

LIVESTOCK

Review of local market for week ending November 12, 1927: Market fairly active on good and choice beef steers, compared with week ago all weights grading good and better 50c higher; new top, $16.50 paid for load 1449-lb local fed bullocks; three loads from nearby averaging 1300 lbs, $15; four loads, 1190@1275-lb Virginias, $13.50@14.75; bulk of sales, $10.50 @12. Bulls and she stock steady with week's 25c advance, all cutters about steady; bulk bulls, $7.25@8; butcher cows, $6.25@7.; cutters, $4.50@5; stockers and feeders slow; better grades closing steady with week's upturn, common and medium grades weak, tending lower; bulk of sales, $9@10. Calves steady; top vealers, $15.50. Hogs slow; compared with week ago, 25@50c lower.

Receipts for Saturday's market: Cattle, 16 cars; 6 Chicago, 4 St Paul, 4 Virginia, 1 Penna, 1 Maryland, containing 560 head, 176 trucked in from nearby farms. Total cattle, 1126 head, 138 hogs, 15 calves. Receipts for week ending November 12, 1927: Cattle, 189 cars; 47 Canada, 40 Ohio, 34 Virginia, 28 St Paul, 9 West Virginia, 8 Penna, 6 Buffalo, 3 Maryland, 2 Kentucky, 1 Indiana, 1 Ohio, 1 New York, containing 5656 head, 280 trucked in. Total cattle, 5936 head, 1169 hogs, 138 calves, 200 sheep. Receipts for corresponding week last year: Cattle, 224 cars; 97 Virginia, 52 St Paul, 27 Chicago, 17 West Virginia, 8 Canada, 7 Penna, 5 Tennessee, 3 Buffalo, 2 Indiana, 1 St Louis, 1 New York, 1 Pittsburgh, 1 Maryland, 1 Missouri, containing 6362 head; 200 trucked in from nearby farms. Total cattle, 6362 head; 71 calves, 1105 hogs, 14 sheep.

Steers:—

Good, 1300@1500 lbs	$13.00@14.50
Good, 1100@1300 lbs	12.75@14.50
Good, 950@1000 lbs	12.00@14.00
Medium, 950 lbs up	10.25@12.75
Common, 950 lbs up	8.00@10.25

Cows:—

Choice	8.00@9.00
Good	6.50@7.50
Common and medium	4.50@6.50
Low cutter and cutter	3.00@4.50

Heifers:—

Good and choice	13.50@15.50
Medium	11.00@13.50
Cull and common	6.00@11.00

Hogs:—

Heavyweight, 250@350 lbs	10.50@11.25
Mediumweights, 200@250 lbs	10.50@11.25
Lightweights, 150@200 lbs	10.25@11.00
Rough stock	8.00@10.25

HAY AND GRAIN

Wheat, Hay and Straw (prices paid to farmers)—Wheat, $1.20 bu; hay, baled, timothy, $12@15; straw, $8@9.

Feeds (selling prices)—Bran, $40@41; shorts, $39@40; hominy, $43.50@44.50; middlings, $45@46; linseed, $55@56; cluten, $47@48; ground oats, $46@47; alfalfa, regular, $40@41.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .49½	$ .48	$ .48¼	$ .50
Eggs, fresh gathered extra firsts (N. Y.)	.52½	.50	.47	.55
Potatoes, 120-pound sack (Philadelphia)	2.45	2.52½	2.52½	3.52½
Steers, good to choice (Lancaster)	13.25	12.87½	12.00	8.67½
Hay, Number 2 timothy, baled (Phila.)	16.50	16.50	17.00	23.50
Wheat, No. 2 red winter (Philadelphia)	1.38½	1.37	1.39	1.44
Oats, Number 2 white (Philadelphia)	.59¾	.60½	.59¾	.55½

Demand Good for All Commodities

Review of the Week Ending November 12

BUTTER—The eastern markets were firm during the week and prices closed about 1c higher. The Chicago market, however, was unsettled. Buyers in the East gained confidence and trading was generally satisfactory. Receivers were able to sell the daily receipts and also to move some fancy storage butter. Production is expected to increase in the near future when cattle are placed in the barns on full winter rations.

EGGS—The New York market was firm on the better grades. Receipts were light and rather irregular in quality, with strictly fancy stock bringing higher prices. Nearby white eggs were a little more plentiful toward the close of the week but prices held steady.

POULTRY—The live poultry market in New York was firm and prices advanced. Lighter receipts were chiefly responsible for the advance. Fowl were in good demand with fancy stock bringing a premium. Chickens were stronger and pullets sold well. Ducks, geese and old roosters were in demand. Receipts of dressed poultry were heavy and the market generally unsatisfactory.

POTATOES—The potato markets throughout the country improved during the week and while prices did not make sharp advances, trading became more active. In many markets supplies were lighter than last week and the stiffening of the shipping point markets also helped the city markets. The most recent crop report increases the estimate of this year's crop. The crop in Pennsylvania is turning out better than was first expected and the estimated production was raised to 25,056,000 bushels or about 3,000,000 more than was estimated in October.

GRAIN—The markets were generally steady during the week. There was a good demand for wheat of good milling quality and this held prices firm despite the heavy offerings of Canadian wheat. Corn was stronger and receipts of old crop corn were light. Unfavorable weather over most of the Corn Belt was also a strengthening factor. Rye was firm and oats advanced.

HAY—Hay was steady with unchanged prices. Receipts at most markets were moderate and the demand from feeding sections continued light. There was a fair demand for the best grades of timothy at eastern markets but lower grades were accumulating and hard to move. The floods in New England resulted in lighter receipts at Boston. Alfalfa hay was rather quiet.

LIVESTOCK—The Chicago hog market declined during the week while beef steers advanced with fed steers reaching the highest price of the season. She stock showed some improvement while vealers advanced sharply. Bulls were stronger and heavy calves about steady. Fat lambs declined while sheep were higher. Feeding lambs were weak at lower prices.

APPLES—The apple market in Philadelphia and New York showed a weaker tendency during the week and while prices did not show much change, trading was much lighter than the week before. Buyers did not make as large purchases and there was a tendency for stock to accumulate. The quality continues about the same and receipts have not been excessive.

YORK PRODUCE

Butter and Eggs—Country butter, 50@ 55c; separator, 55@60c; eggs, 50@60c.

Poultry—Hens, 16@22c, dressed, 75c@ $1.75.

LIVESTOCK

Cattle—Steady. Steers, $9@10.75; state bulls, $4@7.75; cows, $2.50@6.50.

Calves—Steady. Veals, $12@15.50; culls, $8@10.50; grassers and fed calves, $5@6.50.

Sheep—Steady. Sheep, $2.50@6.50; culls, $2.25@3.50; lambs, state, fair to good, $11.25@13.75, choice southern, $14; culls, $8@11.

Hogs—Steady. Light to medium weights, $10@10.25; pigs, $10@11; heavy hogs, $9.75@10.50; roughs, $7.50@8.25.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt or 30-day shipment City Brand, per ton, in 100-lb cotton sacks; red dog, $48.50, nominal; western feed, prompt shipment brand, $36, in 100-lb sacks; spring bran, $36, in 100-lb sacks; middlings, $41; red dog, $47.50, all in 100-lb sacks, all-rail or lake-and-rail shipments, white hominy feed, $39.50 nominal, in 100-lb sacks; cottonseed meal, 41 per cent protein, $50.80 in 100-lb sacks.

Hay and Straw—Hay, old or new, large bales, timothy and light mixed: No 1, $23; No 2, $21@22; No 3 and poorer, $17 @20. Straw, large bales, rye, $22@23.

Grain—Wheat, No 1 red, f. o. b. domestic, $1.45¾; No 1 dark spring, c. i. f, domestic, $1.51¾; No 2 hard winter, f. o. b. export, $1.41; No 2 mixed durum, f. o. b. domestic, $1.39¾. CORN, No 2 yellow, all rail, 93½c; barge, 93½c. OATS, No 3 white, 41½c; No 2 white, 59@59½c; No 4 white, 58@58½c; fancy white, clipped, 65@66c; No 3 white, clipped, 58@ 59c. RYE, No 1 f. f. export, $1.01. BARLEY, malting, c. i. f, domestic, 95c.

CHICAGO LIVESTOCK MARKET

Hogs—Top, $10.70, strictly choice 160@ 190-lb average; about steady; bulk $10.50@10.65; 140@200 lbs, $8.75@9.35; most pigs, $8.50@8.75; packing sows largely $8 @8.35; best lightweights, $8.50@8.60.

Cattle—Compared with week ago: Fed steers sharply higher; highest of season; instances 25@50c up; western grassers strong to 25c up to killers; 15@ 25c higher to stockers and feeder dealers; good to choice fat cows and heifers 25@ 50c higher, bulls strong to 25c higher; vealers, $1.50@2 up; both fed yearlings and long keep steers and heifers

The story of a runty pig

Just look at this fellow! Don't you feel sorry for him? Worms, malnutrition—most everything's the matter. He sure was an unpromising specimen to pose for a picture. Weighed only 45 lbs.

ON SEPTEMBER 30th this pig was sickly, undernourished and wormy. He weighed just 45 lbs. . . . Then things began to happen! Dr. Hess Improved Stock Tonic was added to his feed. And what a change it brought!

On January 3rd—95 days later—he weighed 203 lbs.! Thus, in exactly 95 days he had gained 158 lbs.—or 1 2/3 lbs. per day!

How? Just ordinary feed and 40c *worth of Dr. Hess Improved Stock Tonic* did it all! Here are the figures:

5 bu. ear corn	$3.00
182 lbs. middlings at $1.40	2.55
19 lbs. tankage at 3c	.57
4 lbs. Dr. Hess Improved Stock Tonic at 10c	.40
Total feed and Tonic consumed	$6.52
158 lbs. gained at 12c	18.96
Profit	12.44

Why could this wormy, runty pig produce 14 lbs. of pork to the bushel of corn, or its equivalent? Because he had added to his ration one tablespoonful of Dr. Hess Improved Stock Tonic each day, or about one pound per month.

This supplied him a tonic to keep his appetite on edge.

It supplied vermifuges that expelled the worms and controlled the worm reinfestation.

It supplied the mineral balance—calcium carbonate, calcium phosphate and potassium iodide—in all-sufficient quantities.

Doesn't look like the same pig here, does he? Those 95 days with Dr. Hess Improved Stock Tonic sure brought him out. He gained 158 lbs. in weight—made a net profit of $12.44—and he'd just about take a prize now at a real hog show!

Dr. Hess Improved Stock Tonic

WORMER—APPETIZER—MINERAL BALANCE
all combined

PRICES: 25-lb. pail $3.00; 100-lb. drum $10.00; 500 lbs. at 9½c; 1000 lbs. at 9c; ton lots at 8½c per lb.
Except in the Far West and Canada

Research Farm

Dr. Hess & Clark, Inc., Ashland, Ohio

Could You Drive This Team?

One Line Driving Is Uncommon in Northern Pennsylvania

"HOW do you let those mules know where you want them to go?" we asked Mr. Enos S. Bell, the driver of the team in the accompanying picture. We had stopped along a road in Lebanon County to watch him finish plowing a small field, driving a team of three mules (Or was it two mules and a horse?) with only one line.

"Oh, that's easy," was his reply, and he pulled the plow out of the furrow and maneuvered the team to show us just how easy.

One line driving is as common in southeastern Pennsylvania as it is uncommon in the northern part of the state. Teams of two, three and four animals abreast are frequently seen plowing and harrowing, guided only by one line and the driver's voice.

The single line is divided and snaps into both sides of the bit of the mule on the left, as shown in the diagram. An iron rod, called a jockey pole, connects the left hame of each animal with the right side of the bit of the mule to the right. A strap connects the left side of the bit of each animal to the tug or side-strap of the animal to the left.

When the lead mule turns right, the jockey poles push the others to the right. When he turns left, the straps pull them to the left.

"But how do you steer the lead mule?" we asked after all this was explained to us.

Again Mr. Bell demonstrated. Several slight jerks on the line meant "Gee" to the mule. A steady pull meant "Haw." That's all there was to it. This is old stuff to many Pennsylvania farmers, but perhaps not to the majority of those living in the northern part of the state.

Mr. Bell, we may add, operates Mr. A. S. Kreider's Homestead Farm, near Annville. He has a son and a daughter who are members of the Lebanon County Baby Beef Club.

Livestock Gains on Water

EXPERIMENTS by the various agricultural institutions have proved over and over that the cheapest of feed for all kinds of livestock is a plentiful supply of clean, palatable water available at all times. A horse needs 12 gallons of water per day, a dry cow 10 gallons, while a cow producing a heavy milk flow needs from 30 to 40 gallons per day. Drinking cups in dairy barns add from two to five pounds per day to each cow's milk production over the open tank method of water supply, and experiments in swine feeding have shown that plenty of water increases the rate of gain.

Yet the winter season, when milk and dairy products are the most valuable and production the hardest to keep up, is the time when cows and other livestock suffer most from the lack of water, either because the tanks or other sources of supply are frozen over, or the water is icy cold. The tank heater is the logical solution to this problem, as it is inexpensive in first cost and to operate.

Many Types of Tank Heaters

Tank heaters come in many different types and sizes. Probably the most widely known type is the one with the firebox entirely under water, as this type uses the heat very efficiently. Almost any kind of fuel can be used, such as waste wood, corn cobs, coal, kerosene, and recently some have been successfully burning waste crank case oil. The heater should be well weighted down with concrete if its own weight is not sufficient, as it is rather disheartening to have it upset with the temperature about 20 below zero.

For winter hog production, experiments carried on last winter at the Iowa Experiment Station showed that heated water in automatic hog waterers paid good dividends by helping the porkers make quicker and cheaper gains. Pigs having access to heated waterers gained 5 per cent more in the same period, the amount of feed per 100 lbs. of grain reduced 10 per cent and the cost of production reduced 63 cents per 100 pounds or 10 per cent.—I. W. D.

Grew Ton Litters Four Years Straight

GROWING ton litters for four consecutive years is the unusual record established on two Pennsylvania farms, according to L. C. Madison, swine extension specialist of the Pennsylvania State College.

In Union County, D. H. Strickler produced 2344 pounds of pork in 180 days in 1924 with 11 pigs sired by a purebred Chester White boar. The next year he grew two ton litters sired by a purebred Poland China sire. One group of 10 pigs weighed 2280 pounds and the other, also of 10 pigs, scaled at 2456 pounds. In 1926, eight pigs of the same breeding weighed 2132.5 pounds. This year Strickler fed eight pigs of Poland China string again and they weighed 2034.5 pounds.

S. B. and L. T. Conner, Clarion County farmers, hold the other four-year record. This year nine grade Chester Whites weighed 2044.4 pounds. During the past three years they grew litters sired by a purebred Duroc-Jersey. Ten pigs in 1924 scaled 2480 pounds, 10 the next year weighed 2206 pounds, and last year 8 pigs made 2248 pounds.

DAIRY

HOLSTEINS Two registered Holstein bulls ready for service. One's dam has 30 lb. record; other's sire's dam 1,000 lb. Must be seen to be appreciated. Prices on application. Herd passed for T.B. and Abortion test. L.K. Hutzenberger, Worcester, Pa.

Buck & Doe Run Valley Farms—Hereford cattle and Poland China Hogs. All ages for sale. THE SAINT AMOUR COMPANY, Mortonville, Pa.

Guernsey Registered Bull Two years old. E. A. VanAtten. Fine quality. Price Reasonable. Red Rock Farm, Troy, Pa.

BULLS Registered Ayrshire Bulls and Bull Calves for sale. W. I. W. BECHTEL. Stony Creek Mills, Pa.

IF YOU WANT practically pure bred Holstein or Guernsey dairy calves, write EDGEWOOD DAIRY FARMS, Whitewater, Wis.

GUERNSEY DAIRY HEIFER CALVES—Practically pure from rich milkers. Write us. L. H. TERWILLIGER. WAUWATOSA, WIS.

SWINE

BERKSHIRES. We have a splendid lot of fall pigs either sex, sired by Elimination Rival, that are good and splendid. Prices reasonable. Also several bred sow gilts all sired by Rival. Dasboro, Del. DAVIS BERKSHIRE FARM.

300 FEEDING PIGS ate to seven weeks old $4.00 each. These pigs are grown on free range with access to growing grains. INDIAN CORN HOG FARM, Dasboro, Pa.

SPOTTED POLAND CHINAS—Fine lot of Sept. pigs by Son of Giant Shipbeam, the 1250-lb. boar. $15 each, 2 for $25, trio, registered free. Nancy Brook, Pa. A. W. KENNEL, R. D. 2.

400 CHESTER WHITE, Duroc and Berkshire Pigs, 5 weeks old, $4.00; 8 weeks old $5.00. Ready to ship in Sept. Oct. & Nov. High-grade or purebred pigs, $6.00 each. Oaks Dairy Farm, Wyalusing, Pa.

Chester Whites Big Type Chester Whites: From our prize winning herd service Boars and open Gilts. Also pigs at 10 weeks of age for sales. H. H. WERKING, Woodsboro, Md.

HAMPSHIRE HOGS—Few choice bred gilts and boars, also pigs. Registered free. Chambersburg, Pa. J. W. FOGELSANGER.

PIGS Big Type Poland China Pigs—Either sex, prices reasonable. CRYSTAL SPRING, PA. OAK SPRING FARM.

POLAND CHINAS Registered, Purebred, Big Type Pigs. Prices reasonable. C. L. LEBO, Womelsdorf, Pa.

BERKSHIRES Two excellent Boars, 7 months old W. F. McSparran, Furnace, Pa.

HIGH GRADE CHESTER WHITE and Berkshire Pigs, 6 and 7 weeks old, $4.00 and $5.00 each. J. LEO ROUSE. DUSHORE, PA.

165 HEAD—Big Type Pedigreed Chester Whites. Young boars, bred sows and pigs from our 765 lb. sow and Champion boars. C. K. Cassel, Hershey, Pa.

BIG SPOTTED POLAND CHINAS—Choice spring boars. Also fine Gilts bred for March and April. BOYD HAMMAN. SHILOH, OHIO.

RABBITS

MAKE BIG PROFITS with Chinchilla Rabbits. Real money makers. Write for facts. 846 Conrad's Ranch, Denver, Colo.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Choicest from the column, when properly answered and classified, make one of the most valuable medical compositions a farmer-stockman can obtain.

CALF CANNOT STAND.—I have a nine-week-old calf which is so weak he cannot get up. When he was five days old I began feeding calf meal, using half milk and gradually substituting water. When he was six weeks old I turned him out to pasture. He seems to have lost the strength in his legs.—J. M. P., Williamsburg, Md. It would be desirable for you to feed more milk for a time, as the calf meal may be fed to advantage. Allow the calf plenty of variety in order to stimulate the appetite. Provide plenty of good bedding and turn the calf several times daily. Attempt to get the calf to its feet every few days. Give one tablespoonful of cod liver oil daily. Keep the bowels moving normally. The oil will help to bring this about, but it is primarily intended to furnish the anti-rachitic vitamin. The calf will probably recover if care is used in the diet and in the handling of the calf.

ABORTION.—A cow which I bought in the spring lost her calf last week. How does contagious abortion act? I am wondering if that might be what is wrong.—Mrs. M. L., Brogueville, Pa. Abortion may be defined as the expulsion of an immature fetus. This may occur at any time during pregnancy but is probably more noticeable when it occurs about the sixth to seventh month of pregnancy. There may be symptoms of uneasiness, springing of the udder or a vaginal discharge. In many cases these symptoms are absent and the first indication is the appearance of the fetus. It is advisable to destroy the fetus and membranes and isolate the cow for a period of sixty days or less, depending upon the discharges that may be present. You would be interested in securing from the Bureau of Animal Industry at Harrisburg the pamphlet on Contagious Abortion. This will be sent to you free by writing Dr. T. E. Munce, State Veterinarian, at Harrisburg, Pennsylvania.

SWEENEY.—I have a horse about eight years old, weight about 1600 pounds. He is lame on left front leg. I think he is sweeneyed. Can sweeney be cured?—E. S., Murrysville, Pa. "Sweeney" is a term applied to a condition characterized by a decrease in muscle tissue. It improves when the horse is put at light work which calls these muscles into play. Massage the affected area daily. Apply a good liniment to the part. It is possible that the sweeney comes as the result of a foot or leg injury. The foot and leg should be examined carefully to determine whether the cause lies in the foot, leg or shoulder.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising (except Baby Chicks) and Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry Breeding Stock, Eggs, etc.) not accepted at word rate. SPECIAL TRIAL OFFER

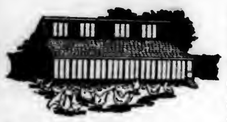
On Our New SUPER-STRENGTH GLASS CLOTH

ORIGINATED 1916 PATENTED

STRENGTH!
Test how you the tremendous strength of the new GLASS CLOTH, here are nine people, total weight 1062 lbs., standing on a frame of the new material. No increase in cost. Extra value for your money. Longer life and greater satisfaction.

Now It Is Easy to Get Lots of Winter Eggs



Hens are big money makers in winter if you put them behind GLASS CLOTH windows. This amazing material lets in the sun's ultra-violet rays. Ordinary glass shuts them out. Science says hens will not lay without these rays. GLASS CLOTH scatters the light over the whole hen house. The hens pep up, scratch and exercise. Egg paralysis disappears. The egg glands start working. The hens lay like it was spring. It is common for 400 hens to lay $1000 worth of eggs during the winter. Profit like that is not to be overlooked. It costs only $5.00 for enough GLASS CLOTH for windows for a big poultry house. The profits are amazing. Never has GLASS CLOTH failed to increase egg yields. Ultra-Violet rays are nature's own egg producers. GLASS CLOTH simply makes it easy to give hens a big supply of these rays.

$1037 in Winter Eggs

Mrs. A. W. Potts writes, "I am a widow. The money I get from my chickens is a good part of my income so imagine my delight when Glass Cloth brought me three times more eggs last winter than I got before. I put the $5.00 roll into one big window across the south side of my hen house. Every day I got a big pail of eggs. My record shows I got $1037 for eggs in the cold months."

FRED TURNER
Originator of Glass Cloth

Half a Million Poultry Raisers Now Use Glass Cloth

500,000 people now use GLASS CLOTH. Its popularity has spread over the entire United States because it brings such enormous profits. People tell us how they get $100 to over $1000 in winter eggs after putting up a $5.00 roll of this remarkable material. All over the country poultry raisers are actually taking out glass windows to put up GLASS CLOTH. It pays them. GLASS CLOTH will make profits for you just as it has for everyone else. Try it this winter.

Porch Enclosures, Storm Doors and Windows

Storm doors and windows of GLASS CLOTH give ideal protection from storm, wind and cold. Repays its cost in saving of fuel and doctor bills. Makes whole house more comfortable. Just tack GLASS CLOTH over your screen doors and windows, or onto home made frames. Cheap and very satisfactory. Holds in heat. Shuts out draughts.

Enclosing a porch with GLASS CLOTH adds a valuable room to the house. Makes a fine play room for the children because of the healthful ultra-violet light. House plants show added life and beauty when given a sunbath here.

Because of its low cost there are many uses for GLASS CLOTH. Keep a few extra yards on hand. Repair outbuilding windows, etc. Used in hog houses, makes stronger, healthier, faster growing fall pigs due to ultra-violet rays.

"Paid for Itself in 3 Days"

"My Glass Cloth paid for itself in about three days in extra eggs it has given me. Before I used Glass Cloth my 61 hens used to lay about 2 or three eggs a day during the winter. Now they have laid high as 40 eggs in one day. With eggs selling at 50c a dozen last winter I figure I got enough EXTRA eggs in 3 days to pay for the Glass Cloth, which cost $4.00. My Poultry house was cozy and warm during the coldest part of the winter. My birds have enjoyed perfect health and I attribute it largely to the Glass Cloth." Mrs. H. W. Nieman.

Ultra-Violet Rays

It has been only a few years that science has known the powers of ultra-violet rays. To poultry they are as necessary as food and water for producing eggs. They cannot pass through ordinary glass, so when your hens are cooped up for the winter behind glass windows the hens get NO ultra-violet light. Egg paralysis sets in; Eggs do not form. Put up GLASS CLOTH and you can just see your hens pep up. In a few days they start laying and soon will lay like it was summer. Nature intended hens to have these rays. Shut them out and you lose money. Let them in and you reap a harvest.

3⅓¢ PER SQ. FT.

This year GLASS CLOTH is greatly improved. A new, super-strength material is being used. "Tough as boot leather." No increase in price. No ordinary accident will tear it. Lasts longer.

To introduce this new material to you we make the following low price, Special Trial Offer:

$5.00 buys a big roll 45 ft. long and 36 in. wide. 135 sq. ft. Will cover a scratch shed 9x15 ft. This amounts to only 3⅓¢ per sq. ft.

Order a roll today. Use it on your poultry house to get winter eggs. Use it for storm doors and windows. Ideal for repairing outbuilding windows.

If, after 10-day's use, you do not find it better than glass or any glass substitute you may return it and we will refund your money.

Samples and catalog showing how to use it on request. Common sense instructions, "Feeding for Eggs," free.

Genuine GLASS CLOTH is made only by Turner Bros. Patented. No other material has the same weather resisting formula. To protect you against imitations we place the name "GLASS CLOTH" on every yard. Look for it when buying.

Do not let another winter go by without getting the profits GLASS CLOTH will bring you. Place your order today.

GLASS CLOTH is sold by thousands of dealers. If your dealer does not have it, order from us direct.

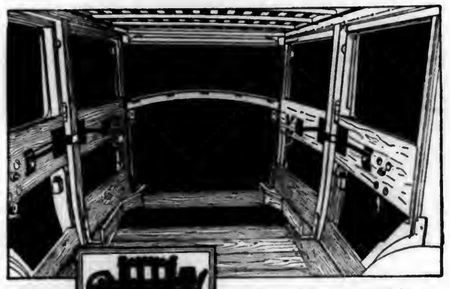
Strength plus Resiliency

THE framework of all Fisher Bodies—like the framework of all quality bodies without exception—is made of wood, powerfully braced with malleable iron and steel braces.—*To supply Fisher with sufficient lumber for body manufacture, approximately 160 acres of timber land, equal to a quarter-section*—most of it hardwood—are cleared every working day.—The framework consists of a strong foundation and a super-structure. Wood is necessary, because it is the only material which combines the necessary *resiliency* with the necessary *strength*. Resiliency is necessary, because an automobile body is subjected to road shocks, strains and stresses. Wood, and wood only, will stand up satisfactorily. Wood, and only wood, will deaden the noise and absorb the shocks.

There are no stronger bodies built than those which Fisher builds—and none which stand up better or longer.

Composite Construction—All Fisher Bodies are of composite wood and steel construction, which affords flexibility, durability and greater strength. The wood reinforces the steel and the steel reinforces the wood.



A Fisher Body framework from the interior. Note the sturdy construction, in which the finest of hardwoods are used.

Lumber—The lumber for Fisher Bodies is carefully selected and seasoned, and subjected to many close inspections, both before and after being cut for building into a body.

Body by FISHER

LEADCLAD FARM FENCE

Send for this catalog of better farm fence and roofing.

BILL PERKINS is fencing again. Kind of mad, too, Bill is. Says the tarnation fence they make nowadays don't last anytime. It's a cinch Bill don't know Leadclad. A heavy coating of PURE LEAD makes Leadclad last years longer than ordinary fence. It'd save Bill a lot of time and money if he'd fence with Leadclad.

We're glad to send the Leadclad catalogue to folks interested in more lasting fences, as well as samples and prices.

Successful Trapping Requires Care with Sets

HERE is a splendid set for the red fox: Find a place where the fox is likely to travel, and pour out a bucket of ashes over a space about two feet square and smooth them over evenly. Then put a handful of roasted meat skins on them. The fox is likely to get them the first night, but if not, bait until he does. Put fresh bait and ashes out every night for four or five nights, if the fox gets it every night. On the sixth night set your traps. Better sift the ashes for this set.

Take two No. 2 traps and with a hatchet cut holes so that the traps will fit into them snugly, in the ashes. Place your traps and cover smoothly with ashes until they are completely concealed. Put small pieces of cotton waste under the pans to prevent ashes from keeping the traps from springing. Carry away all loose dirt which you have dug up, on a newspaper or piece of burlap, or else cover it up thoroughly with ashes.

Rough, broken, rocky sections, with some high ridge lines and swampy or marshy land between them furnish good sets for red foxes and other foxes.

Minks Caught in Bait and Blind Sets

Here is an excellent bait set for either raccoon or mink: Find a place near a stream or pond margin that is suitable for a bait set, then take some mud and build up a crawdad house, making it look just like a crawfish made it. Put one or two small fish in the hole, so they will not show too plainly. Set your trap in the most likely approach to the hole, and very near it, and cover lightly with mud-soaked leaves. Where low, swampy land has been drained into a nearby creek through tiles, these tile outlets furnish a large number of good mink sets. Minks are caught in both blind and baited sets, but the first mentioned is far more successful. If you prefer a baited set for mink, use any kind of small fresh fish as bait. Small perch are good.

Wherever you find opossums you are also likely to find skunks. They use in about the same kind of country—a rather dry, upland region, but not far from a running stream, lake or pond. The opossum rustles its food in creek bottoms and low, swampy places, but it prefers to have its den out in the hills, or in some other dry locality, for it dens in the ground, under the upturned roots of fallen trees, or in hollow logs lying on the ground, rather than in standing timber.

Wild Grapes Attract Skunks

The most successful sets for opossums and skunks are in trails and runways leading to persimmon trees. Wild grapes are also a great attraction for these animals, and they will travel long distances to get this fruit, which grows plentifully almost all over the southern and central states, in swamps and creek bottoms. Persimmon trees are often found in sandy valleys and glades in low, swampy places, and especially in old abandoned fields alongside or near creeks and river bottoms. Wherever there are wild berry patches you will also very likely see signs of opossums, 'coons and skunks, and there will be many good sets in such localities, especially in their trails leading back into the swamps, or into the uplands in the case of the opossum. The 'coon is a more or less water-loving animal. He leaves his imprint in the muddy margins of the creeks and rivers in his hunt for crawfish and frogs. But sometimes he leaves the low ground and forages out into the uplands, for he ranges far from his den tree.

When making land sets for any kind of animal, carry with you a large piece of burlap to stand on while at work. All debris, chips, loose dirt, etc., should be taken away and thrown into running water if possible.—I. H. Motes.

Working for More Intelligent Feeding

The College Feed Conference Board—What It Is and How It Operates

By E. S. SAVAGE

THE College Feed Conference Board was organized to bring about more intelligent feeding of dairy cows, so dairymen can make a better income from milk production. It is a practical bit of extension work by the agricultural colleges represented on the board, which today number nineteen. A roster of members reads like a Who's Who in Dairy Feeding in the United States and shows that the state colleges of all the leading dairy states are taking part in the work.

The board studies and approves dairy feed formulas for manufacturers who ask its cooperation, and who are willing to comply with the board's regulations which are based on college research and the results of sound experiment. It is a purely voluntary service, and open to any feed manufacturer who requests it and adapts his feeds to the specifications laid down.

Certain Standards Set up by Board

These specifications I am listing in detail as they define the standards which the board has set up after considerable experience in checking feed mixtures which make milk economically.

They are as follows:

1. All feed formulas must be public and be printed on the bag or on a tag, accompanying each bag. In case of bulk shipments formula should accompany shipment.

The following list of ingredients is approved for use in College Feed Conference Board formulas:

1. Corn meal
2. Corn feed meal
3. Hominy (white or yellow)
4. Corn bran
5. Corn gluten feed
6. Corn gluten meal
7. Corn germ meal
8. Corn distillers' dried grains
9. Ground oats
10. Ground barley
11. Ground malt
12. Malt sprouts
13. Brewers' dried grains
14. Malt grains
15. Ground wheat
16. Pure wheat bran
17. Pure wheat middlings
18. Standard wheat bran (with mill run of screenings)
19. Standard wheat middlings (with mill run of screenings)
20. Flour middlings
21. Red dog flour
22. Wheat mixed feed
23. Ground buckwheat
24. Buckwheat middlings
25. Cottonseed meal with protein percentage stated
26. Linseed meal, O. P. with protein percentage stated
27. Soy bean oil meal
28. Peanut oil meal
29. Cocoanut oil meal
30. Dried beet pulp
31. Alfalfa meal
32. Molasses (cane)
33. Molasses (beet)
34. Skimmed milk powder
35. Dried buttermilk
36. Blood flour
37. Tankage
38. Fish meal
39. Steam bone meal
40. Raw bone meal
41. Bone black
42. Ground limestone
43. Salt

3. The range of dairy feeds with respect to total protein content shall be 12, 16, 20, 24 and 32 per cent.

4. The minimum number of plant sources for concentrates represented in formulas for dairy feeds shall be four.

5. The maximum amount of cottonseed meal in formulas for dairy feed shall be 25 per cent, except in the 32 per cent mixture where it may be 40 per cent.

6. The maximum amount of gluten feed shall be 40 per cent. The maximum amount of gluten meal shall be 25 per cent, except in the 32 per cent mixture where it shall be 40 per cent. The maximum amount of both gluten meal and gluten feed combined shall be 40 per cent.

7. The maximum amount of ingredients from a single plant source shall be 75 per cent.

8. Any ingredient shall not be considered as a plant source to conform to specification 4 unless it is present in 5 per cent or more.

Specify Per Cent of Minerals

9. The minimum pounds of T. D. N. in 1 ton of 12 per cent dairy feeds shall be 1375; in 16 per cent, 1400; in 20 per cent, 1440; in 24 per cent, 1440; in 32 per cent, 1450.

10. It is recommended that the weight per bushel of dairy feeds be about 32 pounds except the 32 per cent mixture.

11. The College Feed Conference Board recommends that the minerals in dairy feeds, except the 32 per cent mixture, be 1 per cent steam bone meal or 1 per cent raw bone meal, 1 per cent ground limestone and 1 per cent salt. The steam bone meal or the raw bone meal must be specially prepared for feeding purposes.

Something Will Be Done About Taxes

THE three great farm organizations of Kansas have mapped out and agreed on a tax-reform program. And that is well. It means something will be done.

In ten years taxes levied on the farmers of the United States have grown from 308 million dollars to 845 millions. They have almost tripled, the National Industrial Conference Board reports.

It has been discovered that Illinois farmers are paying 40 per cent more taxes on the actual cash value of their land than is being paid by Chicago real estate.

And 600 bookkeeping farmers in another state find that taxes are taking one dollar in five of their earnings.

Which makes it very plain that one practical way to relieve the farmer is to reduce his taxes—relieve him from carrying more than his share of the tax burden, relieve him from a part of the load which should be borne by others much better able to bear it and in duty bound to.

Property Taxes Are Unusually High

One big reason why taxes are unduly high and oppress the farmer and the town home-owner, is that real estate and the general property tax still are the principal source of revenue for county, city and state governments. Yet in all probability, intangible personal property, stocks, bonds, bank deposits, notes, etc., now exceed real estate in value and it is increasingly difficult to reach the increased wealth by taxation.

The economists of the National Industrial Conference Board are of this opinion, and these economists say the farmer has suffered particularly from this development. "There can be little doubt," they add, "that the burden of taxation is heavier upon agriculture than upon the rest of the nation's taxpayers combined.

Eating them out of house and home

And sharing this injustice with him is the home-owner in town.

It is partly because personal property do not pay its honest share of taxation that state and local taxes which were $36.27 per capita in 1921, had reached $119.92 per person gainfully employed in 1926, and that the brunt of this increase was loaded on to the general property taxpayer. Wealth which escapes the notice of the assessor has not been paying its share for years, a share which also has greatly increased in the meantime. And the result is that real property has been doubly hard hit and a readjustment of the entire system of taxation has finally become imperative.

It is to relieve farm and city property from the burden of such unjust taxation that the Farmers' Union of Kansas, the Farm Bureau Federation of Kansas and the State Grange acting in concert, have outlined this tax-reform program:

Enactment of a state income tax.
A gross production tax on minerals.
A limited sales tax on luxuries.

Home Rule in Taxation Is Provided

This will afford a broader and more equitable basis of taxation than the present injurious and outgrown general property tax, and is as much in the interest of the overtaxed town man who owns his home as it is to the farmer.

It virtually provides for home rule in taxation for cities, towns and counties. Also it will eliminate varying assessment valuation in counties, which the Illinois Agricultural Association says is costing the farmers of that state from 1½ to 2 million dollars a year.

Another good effect of such a tax-reform system will be to center attention on the expenditures of local governments, and that is all to the good for every community.

Such a tax revision put in effect would reduce the tax burdens of the farmers and home-owners of any state, as it should. It would result in far more equitable levies. It would make farm taxation bearable where at present it is unbearable and unfair and not longer to be borne.

Comments on the Week's News

THE year 1927 must be near the top of the list in the matter of catastrophies, with six weeks to go. The latest at this date is the explosion of a natural gas reservoir in Pittsburgh, killing more than two score of people and doing damage to the extent of several millions of dollars. People used to consider such casualties as we have had as acts of Providence. Now, we are beginning to realize that they are frequently the result of man's shortsightedness.

✦ ✦ ✦

Richard Pattee, whom many of the dairymen of this section will remember as the dapper and efficient presiding officer of the national dairy meetings, died at his home in New Hampshire on November 6th. Mr. Pattee was one of the organizers of the New England Milk Producers' Association, and also gave valuable assistance in promoting dairy organizations outside his own territory. His illness extended over more than a year.

✦ ✦ ✦

A march on Erie will be made by local delegates to Pennsylvania State Grange to convene in that city December 13-15, inclusive. The headquarters will be at the Lawrence Hotel, while the sessions will be held in the Carney Auditorium. The meetings of the State Grange have become big, annual affairs since each subordinate Grange is entitled to two delegates. This is not the year for the biennial election, altho a master will be chosen for the unexpired term.

✦ ✦ ✦

The Bureau of Plant Industry, in the State Department of Agriculture, has examined 16,039 colonies of bees in Pennsylvania and found that about two per cent were diseased with American foul-brood. It also found that fifteen per cent were not housed according to law. The law of 1923 makes it unlawful to keep bees in hives which are not readily accessible for examination. This makes it necessary to provide modern structures with movable frames so that every comb may be easily removed and examined. The inspectors found that many of the violators were not aware of the law's requirements in this respect.

✦ ✦ ✦

To one standing on the side lines three weeks before Congress meets it looks as if we would have an avalanche of bills and a barrage of words dealing with the subject of flood control. If it takes as long to arrive at a definite program as it has in the matters of Muscle Shoals and the Boulder Dam, there will be plenty of time in which a regular Noah's flood might occur. Other unsettled and long-drawn subjects are the merchant marine and the U. S. Shipping Board. When to these big unsettled questions is added the flood of new bills which will be introduced there ought to be plenty of chance for preelection political maneuvering.

✦ ✦ ✦

A chicken thief was sentenced to life imprisonment in New York the other day. It was his fourth conviction before the courts, and the Baumes law makes it obligatory upon judges to sentence fourth offenders for life. We wonder how long people will stand for so drastic a statute. It was urged at the passage of the law that severity would lower the number of criminals; that it was necessary to strike terror by extreme measures. But even laws to protect society should be based upon justice. A criminal may commit one, two, or three major crimes and get off lightly, or go scott free, while the fourth conviction for petty thievery brings life imprisonment.

✦ ✦ ✦

New Jersey voters at the late election approved the proposed state highway development plans, and the bonds to carry it into effect. Already possessing one of the best road systems in the country, this move will place New Jersey in the foremost ranks of the good-roads states.

The National Grange's Program

THE sessions of the National Grange were opened last week in Cleveland. While a report of the proceedings is not yet available, a reading of Master Taber's address gives an outline of the possible actions.

Mr. Taber stated that agricultural people consume twenty to thirty per cent of the nation's manufactured goods and are responsible for a large share of the national prosperity. For this reason alone, agriculture is worthy of the respect and attention of all classes. "Equality for agriculture," he said, "cannot become legislation alone. No amount of governmental assistance, of education, of experimentation, or of research, will do for agriculture all that needs to be done." Here he emphasized the necessity for full cooperation thru organization if justice and equality are to be achieved.

The National Master then referred to the Grange's plan in the so-called farm relief efforts. It is claimed to be a straightforward, honest attempt to bring tariff benefits to the articles of which there is an exportable surplus. The export debenture plan is somewhat after the plan of the late David Lubin, then called an export bounty plan. The Grange will bring all its influence to interest Congress in this matter.

The speaker decried the growing disrespect for law, and the inclination of citizens to choose for themselves what laws they would respect and which they would disobey.

Better Than Expected

AN INVENTORY of the crops of the nation shows better than most farmers looked for three months ago. The changed weather conditions at the close of August are responsible for increasing the corn crop by 147,000,000 bushels. The wheat yield will be 30,000,000 bushels more than was expected earlier, and the hay crop reached 100,000,000 tons for the first time in history. Pasture has been unusually good to date, and this helps to conserve the feed supply. Prices have held their own in almost every line in spite of a considerable lessening of employment in the big centers.

There is a noticeable effect of the adoption of labor-saving machinery in industry in the increase in unemployment. The production of manufactured goods is keeping up in spite of the fact that the number of people out of work has been increasing. Observers are of the opinion that by next year more farm labor will be available than has been the case for a number of years. But labor-saving machinery is also being adopted on the farms. What will happen if all industry is run without the aid of manual labor?

Pennsylvania's Potato Crop

THE November crop report estimates Pennsylvania's potato crop at 25,056,000 bushels, which is slightly less than the five-year average. The yield per acre for the state is given as 116. Since hundreds of farmers get 200 bushels, and scores make the 400-Club, it is evident that a great many produce much less than 116 bushels per acre. Only three states are ahead of Pennsylvania in the total yield of potatoes, altho 16 produce a higher average yield per acre. Maine standing at the head with an acre yield of 228 bushels as an average for the state. The states which exceed Pennsylvania in total yield are: Minnesota with 32,522,000 bushels; Maine, 32,148,000 bushels, and New York with 28,620,000 bushels. In spite of the big crops produced by Pennsylvania and New York, neither state produces nearly enough to supply their home markets.

The 1927 yield of potatoes for the United States is estimated at 400,305,000 bushels, approximately 44,000,000 greater than the 1926 crop.

Editorial Sidelights

OUR cover picture this week seems to us to typify the spirit of the age in which we live, the spirit of progress, of going somewhere. It typifies, too, the agency that is responsible for most of our material progress, transportation. Can you name anything, luxury or necessity, that was not brought to you or made possible by the railroads or other means of transportation?

One of the railroad advertisements speaks of a fine passenger train as a moving hotel. And isn't it? A week ago we boarded a train in Philadelphia at 11 P. M. and retired for the night. Shortly before seven we were awakened in the vicinity of Pittsburgh and had a breakfast similar to that served in any hotel.

At noon, although we hadn't earned it, we had another meal. The train was speeding across the flat central counties of Ohio as we ate our potatoes, beets, spinach, stewed onions and cauliflower. It was, obviously, a vegetable dinner. The menu also offered fish and two or three kinds of meat, besides a wide assortment of salads, desserts and drinks.

Arriving in Columbus before 3:00 P. M. we attended a great meeting of Ohio's 4-H Club boys and girls at the State University. In the evening we saw the 1927 group of Master Farmers of Ohio. They received the Master Farmer Awards before a brilliant gathering. It was an impressive and inspiring meeting. Pennsylvanians shall witness a similar Master Farmer ceremony in Harrisburg during the week of the next State Farm Products Show.

Then back to another Pullman berth for the return trip to eastern Pennsylvania. About 1000 miles in less than two days! And these were not the railroads' extra fast crack trains. What would George Washington have said? Probably just what we would say if we could picture airplane travel 150 years hence!

ADVOCATE FARM BOARD

Business Men Oppose Raise of Prices—Jardine Asks Protection of Farm Radio—New Building Begun.

Washington, D. C

THE Business Men's Commission opposes the McNary-Haugen bill and other proposals designed to raise the prices of farm products relative to the prices of other commodities. The creation of a Federal Farm Board to promote the organization and to control stabilization of corporations engaged in the buying and selling of farm products as a means of stabilizing prices is advocated.

A System of Land Credits

Western reclamation boomers are preparing to ask Congress to provide a system of land credits whereby the new settlers on western irrigation projects can buy the land on time and also secure advances from the government to erect buildings and make other real estate improvements. They maintain that this will be necessary to induce settlers to locate on the many reclamation project farms that are unoccupied.

Interfere with Farm Radio Programs

In a letter to the Federal Radio Commission, Secretary of Agriculture Jardine has requested that the commission refuse to grant wave lengths or increased power to any stations which might interfere with farm programs.

"The Department of Agriculture understands," says Secretary Jardine, "that there are several cases before the commission in which commercial and private organizations are soliciting the commission to increase the strength of their station and lengthen the period of sending, a situation which, if complied with by the commission, might result in seriously interfering with the cooperative public radio program of the department and the colleges."

Pennsylvania Leads States

One hundred and seventeen commercial and agricultural college radio stations are now broadcasting radio programs prepared by the Radio Service of the Department of Agriculture. Pennsylvania leads the states in number of stations broadcasting the department's programs, with nine stations regularly subscribing to Radio Service releases. Michigan has five and Ohio three stations.

Would Enrol All Aliens

Amendments to the immigration laws proposed by Secretary of Labor James J. Davis would provide for the enrolment of all aliens. Aliens who have been deported and who hereafter enter the country unlawfully would be subject to penalties in addition to deportation and fines would be imposed on transportation companies for bringing stowaways who are discovered at United States ports of arrival, unless it can be proved that a competent search of the vessel had been made at point of departure. All alien narcotic peddlers would be deported.

Work on Building to Start

Work on the Department of Agriculture's new administration building will begin early in December. The structure will connect the two white marble wings already on the site. This new building will be 160 feet wide, 170 feet long, five stories high, with a three-story colonade front.

Graduates Return to Farm Work

In answer to the criticism that graduates of agricultural colleges do not return to the farms, the Division of Agricultural Education, Department of Agriculture, has found by an extensive survey, that the percentage of graduates in the agricultural courses, who are either farming or in a business relating to farming or in professional agriculture, such as teaching, research or extension, is 78 per cent. In other words, more than three-fourths of these graduates engage in occupations for which their technical training in agriculture and the related sciences definitely prepared them. It was also found that of 100 graduates in the agricultural courses of the land grant colleges 28 engage in farming, while 24 choose teaching as a profession.

Holds Optimistic Trend

An optimistic view of the farm real estate situation is held by Secretary of Agriculture Jardine. He says he thinks this is the time for farmers to buy farms and, if they already own them to hold the farms. Agriculture is improving and will continue to improve in coming years. He does not give the same advice to speculators who buy farms to sell again.—E. E. R.

DATA BEING SECURED

Farm Census Now in Progress—Sixty Per Cent of Cattle T. B. Tested—Orchards Inspected Show Less Disease.

Harrisburg, Pa.

OFFICIALS of the State Department of Agriculture expect to profit considerably from experience of three years ago in the farm census now in progress all over the state. The reports for this census, which is being handled by assessors, call for additional information over that of three years ago which likely will furnish much on which there has been speculation rather than facts. State authorities are in contact with county commissioners in every part of the state and it is expected to handle a couple of thousand complete reports. The first census was made three years ago. This time every farm is to be covered, data being taken on stock, equipment, etc., as well as crops.

Unite on Seed Inspection

State and federal officials have succeeded in working out a plan whereby data will be interchanged on seed selling stunts. The state authorities have been causing some arrests and through federal aid have traced some of the mixtures to other states.

Cattle Work Jumps

According to some late figures of the Bureau of Animal Industry not far from sixty per cent of the cattle of the state have been tested for tuberculosis and the end of the year may show a surprising total. Nineteen counties have been completed, although all are not in the same classification as to accrediting. Payments for cattle run around $250,000 a month, including state and federal indemnities.

"Yellows" Being Stamped Out

Complete reports of the work of the Department of Agriculture on inspection for peach "yellows" show much activity in the southern peach growing counties this year, about $02,000 trees having been inspected. Franklin County has a very fine showing considering the number of trees in its orchards. Less than one-fourth of one per cent of trees were found infected in the 1927 inspection.

Explain Patrol Work

One of the plans of the State Department of Agriculture for the winter calls for explanations of the road patrol system in combating the borer and the beetle. There was less trouble this year than known before, considering the huge number of vehicles stopped. It is believed that a great measure of public cooperation will be obtained by work at winter meetings. There was more interest than looked for in the exhibits of borers and beetles at county fairs and specimens are in demand.

More Wells Drilled

According to a report coming here more wells have been drilled on farms this year than hitherto recorded. Firms engaged in the business have found no lack of orders and from all accounts excellent wells have been struck.—T. C.

HOLD PRUNING SCHOOL

Fruit Growers Will Be Instructed During Two-Day Session—New Phase of Vocational Work Instituted.

Trenton, N. J.

THE New Jersey Experiment Station is conducting a pruning school for the fruit growers of Burlington and Camden Counties, December 1-2nd. Instructions will consist of lectures and orchard practice and will be in charge of Prof. A. J. Farley and A. L. Pierstorf, of the Agricultural College. The school is free to anyone who is interested in better fruit.

County Agents Get Training

The county agents of South Jersey met with the Horticultural Division of the Agricultural College recently for a day's intensive training in the newer methods of pruning mature fruit trees.

White Potatoes Hit by Blight

Late blight has struck the white potato crop in Camden and Gloucester Counties and is causing considerable loss to the growers. The disease has been prevalent in the fields the past fall and it has now made its appearance in the cellars where the potatoes are stored. Seed potato stocks of Cumberland and Salem Counties are clear of the disease as the growers had sprayed the crop while growing.

School Exhibits Won Prizes

Warren County banks and business houses contributed the prizes for the school exhibits in the second annual farm products show, held in Hackettstown, November 16th. The show continued for two days and was featured with entertainment by the Allamuchy Township schools, and illustrated lectures and addresses by officials from the Agricultural College.

Special Instruction Given

The public schools of Alloway, Salem County, are providing special instruction for the boys while the girls are taking their work in dressmaking and allied branches. The boys are being taught the elementary phases of belt lacing, knot tying and rope splicing. This is a new phase of vocational work for the rural schools to adopt.

Initiated Large Class

Salem County Pomona Grange has initiated a large class in the fifth degree in anticipation of the coming session of the New Jersey State Grange in Atlantic City on December 7, 8 and 9th.

Doctor Lipman Will Speak

Dr. J. G. Lipman, dean of the New Jersey College of Agriculture, will address an open Grange meeting at Three Bridges, Hunterdon County, on November 26th.—A. K.

MUCH CELERY STORED

Light Apple Crop Provides Space in Storage Houses—Flood Creates Milk Shortage—Cattle Prices High.

Ithaca, N. Y.

DUE to the light apple crop storage houses offer much space which is being rapidly filled with celery in crates. Recent rains have produced excellent stalks. The harvesting of cabbage is being rushed with yields above the average. Heads are hard and too big to please the dealers.

Meet Milk Emergency

With more than 3000 cows lost in the New England floods the milk shortage may become a very real one before the end of this month. Transportation in the Vermont area has closed other avenues for milk delivery. Boston has appointed a milk commission to provide a proper supply of milk for that city. Its members having been former members of the federal milk commission during the war. Emergency information is being sent to all Farm Bureaus of this state by the State College, setting forth methods of getting all possible milk for New York City's use. Leaders believe the outlook good for a single universal eastern milk producers' organization in the coming months.

Cattle Bring Good Prices

The Liverpool auction sale of 130 head of purebred Holstein cattle brought an average price of more than $200 a head for all ages of animals.—M. G. F.

County News and Comment

Adams County, Pa.—The weather has been unusually good for the farmer the past month. The late corn has finished out good and solid and is going into the cribs in fine shape. Wheat is fine. Also rye and barley. Fall pasture good. Some clover seed being made but yielding much but we have had none for several years. Apples are all away with about 40 per cent of a crop. Prices very satisfactory. Hogs are plentiful and low in price for the price of feed, 10c live weight. Some new corn selling locally at $1; eggs scarce at 52c; butter, 55c.—A. R., Nov. 15.

Bradford County, Pa.—Roads are improving since our snow has melted. They were pretty slippery. Some were filled with snow so that mail drivers had to drive thru the fields. The recent thaw was enthusiastically welcomed as there were many potatoes yet to be dug. Potatoes on the general farm are very poor as a rule on account of the rot. Many farmers have given up digging and bought their supply instead. Considerable fall plowing done. Considerable interest was shown in the late Poultry and Farm Products Show and Cattle Beauty Contest held in Towanda. The cabbage market seems dull. Selling slowly at $8@$10 ton in the field; potatoes $1 in the field; buckwheat, $1.65.—G. E. E., Nov. 12.

Cameron County, Pa.—We are having an unusually warm fall in this county and also had a week of snow of about 6 or 8 inches. Bears are very numerous here this fall and deer are plentiful as usual. This year apples were very scarce in this section. Also acorns and berries making a hungry fall for bears and squirrels. The grain crop was very poor in this county, no buckwheat and oats to amount to anything. Buckwheat flour quite high in price. Potatoes pretty good crop.—Q. E. T., Nov. 12.

Cumberland County, Pa.—Have had several heavy frosts, followed by snow and rain, but for the past several days have had fine weather. Farmers are busy husking corn which is a good crop. Potatoes are about all marketed at $1 per bushel at the barns, or $1.25 per bushel delivered. A number of car load lots of certified seed have already been shipped into the valley but not enough to fill the demand and growers are saving some home-grown seed for next year's planting. The apple crop is short but not high in price. Celery and cabbage plentiful. Wheat, except late seeding, is looking fine. Owing to the high price of cattle some farmers have decided not to buy more cows. Prices: Wheat, $1.25; corn, $1; hay, $18; apples, 75c basket; butter, 55c; eggs, 70c.—A. L. H., Nov. 14.

Lackawanna County, Pa.—Potatoes not all dug and some cabbage to cut yet. We had hard rains that lasted four days the third week in October, causing much damage on the low lands. November brought snow and freezing weather with thousands of bushels of potatoes in the ground and fields of cabbage uncut. The pleasant weather since has enabled the farmers to gather their crops. Beef cattle low in price. Potatoes are $1.50 bu.; butter, 53c; eggs, 75c; poultry, 28@35c.—E. A. K., Nov. 14.

Lancaster County, Pa.—The extreme late autumn permitted the corn, which was very late planted, to mature before cutting and the results are a good corn crop in general. The wheat also has been favored by the excellent weather and looks fine. Local prices are: eggs, 58c; butter, 45c; wheat, $1.25; bran, $1.95 cwt.; gluten, $2.30 cwt.; hay, $12.—H. C. R., Nov. 12.

Lawrence County, Pa.—The weather has been exceptionally fine so far this month excepting a snow flurry of short duration. Apples, potatoes and garden vegetables were early housed for the winter and continued warm weather has caused rot with early-stored apples. Stock still outside in daytime. Pasture abundant yet. Corn crop short and is mostly harvested. Game is plentiful (great scarcity of all kinds of nuts this year. Prices at present are as follows: No. 1 wheat, $1.26; oats, 50c; ear corn, 58c; rye, 56c; clover hay, $17; timothy, $15; spring chickens, 50c, dressed; country butter, 50@55c; fresh eggs scarce, 60@65c.—M. L. V., Nov. 14.

TIGHT BINDING

FADA Radio

Which do you choose?

The old-time jumble OR **The new-day harmony**

One reason you enjoy a great choir is the way the different groups of voices come swinging in, to blend in the harmony that so delights your ear. Fada Harmonated Reception faithfully reproduces the variations and shades of many voices in unison. Radio experts and musical critics agree that it has lifted radio to a new high plane of realism. Fada Harmonated Reception means that each and every part of both the Fada Receiver and the Fada Speaker are so matched and harmonized that they are electrically and musically one instrument. And also that all the fundamental notes and the true harmonics (overtones) of the musical and vocal scale are faithfully reproduced. Only when both receiver and speaker are Fada can you have Harmonated Reception. Any Fada dealer will be glad to explain and demonstrate this revolutionary forward step in better radio.

There are five Fada models—all Neutrodyne receivers—priced from $95 to $400

PAPEC FEED GRINDER

Hammer Type

Finer Quality—More Capacity—Feeds Itself

GRINDS ALL GRAINS, ROUGHAGES, ETC.

BUILT to Papec standards—for Papec guaranteed performance. Amazing, ASTOUNDING new features: automatic feed control—finer QUALITY grinding—unusual capacity—low speed design for tractor use—attractive price.

Customers Delighted—Demonstrations Excel Claims

"Saved me $100 first month grinding alfalfa for 125 hogs"—"rapidly paying for itself Thursdays on custom work for neighbors"—"capacity double my burr mill, feed much finer." Sure death to corn borers. Our demonstrations prove our every claim. Ask for folder No. 20 and prices. Tell us the kind of grinding desired; we'll send sample.

Papec Machine Co. 178 Main Street Shortsville, New York

The Name Guarantees The Quality!

Mention Pennsylvania Farmer When Writing Advertisers

ADVERTISERS WANT TO KNOW WHERE THEIR ADVERTISING IS SEEN AND THEREFORE APPRECIATE HAVING YOU MENTION THE NAME OF THIS PAPER WHEN YOU ANSWER ADVERTISEMENTS.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

I HAVE just been reading the advance sheet synopsis of an article which is to appear in "Plain Talk," (a magazine which I do not read and for which I have no use) which suggests "killing off," figuratively, of course, the unsuccessful farmers. He would have the successful ones take over the land of those who can't make it go and run it all under up-to-date methods. The author says this method of bringing farm relief would be much better for all concerned than would the "deadening narcotic of government subsidies." He proposes that one-tenth of the present farmers, the best ones, be educated so that they may be the farm managers for all, and the other nine-tenths be reduced to the ranks of laborers and mechanics for doing the manual work.

◆ ◆ ◆

Of course, there is no use in getting excited over the ravings of any particular quack farm doctor. There are so many of them that one would be excited all the time if one took the tribe seriously. This particular writer points to the successful development of commerce and industry thru centralization of capital under centralized management. But in sneering at farm subsidies he does not mention the tariff, the land grants to railroads, nor the close immigration laws passed in the interest of labor. The gist of his argument for the plan is that it would so cheapen the cost of production that the consuming public would be able to live more cheaply.

◆ ◆ ◆

I WISH to ask the author a question or two: Are food and clothing material the only essential products of the farm? From whence came most of the able leaders in business, law, medicine and government? If the old-time farm home and rural community are to be abolished, how will the world be supplied with leaders? If agriculture is to be commercialized in the same way as industry will it furnish the right environment for the making of big men and women?

◆ ◆ ◆

OF COURSE, there is room for improvements in farm methods and operation as there is in every other line of busines. But there are few industries in which improvement has been greater in the last quarter of a century. According to a table just published, I find that for every 100 men employed in the different industries twenty-five years ago, the following numbers produce the same amount now. Food and food products, 75; iron and steel, 81; lumber, 101; paper and printing, 61; metals and metal products, 44; electric light and power, 19. Thus it may be seen that farmers are not as "slow" as some think them.

◆ ◆ ◆

BUT I am departing from the orginal purpose of this department. My aim was to keep a little nook where I could gossip about me and mine, and say things which are not sufficiently dignified for the editorial pages. Everyone has to talk about himself more or less. That is, the male sex does. That is one of the chief benefits of having friends,—people who will listen to you. But I find that most of my friends are long-distance friends now. When one moves out of his boyhood neighborhood in middle life, and engages in business which occupies most of his time, he does not have the opportunity of making new friends. Of course, he makes acquaintances, but there is a vast difference. I sometimes feel this keenly, and long for the close friendships of former years.

But there is the family, and the family includes two sturdy little boys. We are fast friends. If association with youth keeps one young, as they say it does, Ponce de Leon overlooked the best bet when he was searching for a fountain of perpetual youth. His mind would have been kept youthful and alert if he had had to answer the questions of a couple of live boys.

I sometimes wonder what kind of questions we of my generation asked when we were children. We did not ask anything about automobiles, airplanes, radios, gas engines, electric lights, motors, tractors, mechanical toys, trolley cars and many other things good for a hundred questions each. That leaves the commonplace things which modern children seem to know all about intuitively.

The Cheerful Plowman

Saving on Meat

MY FATHER lived for many years through sunny days and days of tears, yet never, he would oft repeat, did he pay cash for pork to eat, and never in those many years did he pay cash for flesh of steers! With his own sturdy hand and arm right on his own sequestered farm he slew his hogs and cured his pork, enough for every knife and fork. Right on his farm he killed his beef to save himself expense and grief!

I'm like my dad in many ways and find his early system pays; I had to sort of learn the trick for father lugged a heavy stick, but now I'm glad as I can be that he whacked common sense in me! I buy as little meat, I feel, as any farmer, live or real; it somehow goes against the grain, it hurts my liver, gives me pain, to pay out shiny honest pelf for labor I should do myself! I cannot to this day be sweet and pay out ready cash for meat! I cannot, cannot on my life, pay other folks to wield a knife that I can wield with my own hand right here at home on my own land!

I always, always will prepare my pork and beef for daily fare; I always will while I am sane lay by my food by might and main; I always will while I know how slay my own pig and moolly cow! The sooner farmers realize that father's methods still are wise the sooner will they fill the bank with dollars piled up rank on rank!—J. E. Tuft.

Tools you need

The business of farming requires many tools and in order to prevent loss of time with broken machinery, general repairing and new construction work, there are many special tools that you should own, as they will pay for themselves many times over in an emergency. We suggest a few below. If you do not have them stop the next time you are near your local "Farm Service" Hardware Store and ask about them.

COMBINATION VISES that can be used for machinery repairs, for holding boards while planing, for fitting pipe, and countless other uses.

HANDY GRINDERS to sharpen your butchering and kitchen knives, to grind down a bolt or smooth a rough metallic surface. They are inexpensive but useful nearly every day.

A SET OF SOCKET WRENCHES will save you much time and injured fingers and outside labor costs on everyday repairs on the automobile, tractor and farm machinery.

A BLOW TORCH for heating a soldering iron, making lead pipe joints, and doing many other jobs where heat is needed.

A HANDY BLOWER FORGE. If you like to do your own blacksmithing get a small portable one with a good blower that you can carry around anywhere.

BOLT CLIPPERS save time and temper, and prevent barbed fingers.

Spend a few hours in a "Farm Service" store and see these and countless other things. There are labor savers, time savers and money savers. You are always welcome to "see before you buy."

Friendly Talks

By Edgar L. Vincent

IN A BIG wind we had the other day a good many trees went down, and those which did not fall lost a lot of branches, and it always brings a sense of loss to us when our beautiful trees are swept away or maimed and disfigured by the loss of big limbs. Some of these trees we have set out with our own hands. We have watched them, kept them trimmed and otherwise worked for their lives; and then to see them carried down to destruction does seem a bit hard.

But one thing I have noticed lately more than ever, and that is that the trees which go down first, and which lose their branches have had an enemy eating at their hearts. If you look at the large branches of one of your trees that has been broken off in a gale, nine times out of ten you will see that there was a rotten spot in them, and that, too, at just the most vital point. Either some worm or other enemy has been working at it, and it kept on until it so weakened the tree that it had not power to withstand the tempest which wrought its ruin. The sound trees, the trees that have not been thus assailed, stand firm, resisting the heaviest tempest that comes.

Destroyed by an Ant

This morning I was reading of a stately tree which stood on the island of St. Helena. It looked beautiful. There were still leaves on its branches. But when some one just leaned against its trunk it collapsed and came down with a crash. What had happened to this tree? It had been honeycombed by white ants. The bark was intact but inside the wood had been completely destroyed.

Only a little thing like an ant, and yet it killed that lovely tree.

But this loss is as nothing by the side of some we see in men. I knew a boy that was given the proceeds from a lot of chickens if he would care for them. This was one way of hiring him to do what as a boy he ought to have been glad to do through love. But he grew to love the money, and the more he loved the money the colder became his love for the old folks. The day came when he rooted his father and mother out of the old home place, and finally selfishness spoiled his life. The worm at heart! How we do need to guard against it! For once it gets a hold upon us it will be a miracle if we ever shake off its fangs; and the time will come when we will go down like trees laid low by storms.

We Know Our Own Foes Best

And there are other foes than selfishness which are all the time trying to undermine character. You know those which trouble you most. I recognize those against which I must fight most strenuously. The difficulty is that we do not think such little things will ever do us any serious harm.

At the threshold is the place to put up our strongest barriers. It is a thousand times easier to keep evil out of our hearts than it is to root it out if it once gets a hold upon us.

But if we open our eyes and recognize these enemies and do battle with them before they get a strangle hold upon us, we shall keep our beauty and retain our strength. Then we shall grow old beautifully and fill the place for which we were intended by the Creator.

For beginnings are always important.

"As a man thinketh in his heart, so is he."

The Boss—Robert, I hope you try to save half what you earn.

Office Boy—I don't get that much, sir.

Wherever you go you hear only *good of* LARRO.

HAVE you ever wondered why Larro is so highly praised—by dairymen—by feed dealers—by agricultural college men—even by competitive feed manufacturers? Wherever you go men never fail to speak highly of Larro.

In fifteen years this remarkable ration has won a volume of good will that few products ever enjoy. Backed by years of experimentation at Larro Research Farm, it stands approved by the court of last resort—the court of public opinion. It has become the standard by which dairy feed is judged.

Such high regard for a product does not just happen by accident—there are sound reasons back of it. It is because the formula has proved the most economical—because each ingredient is the best possible quality for its purpose—because it is always exactly the same—because Larro Dairy Feed is always good.

And most important of all, because hundreds of thousands of dairy farmers have found that they can feed it, and, after the feed bill is paid, have more profit than from feeding any other ration.

Get a trial order from your Larro dealer. Ask him about the generous guarantee that enables you to test Larro without risking a cent of money. See by your own experience with your own cows the big difference between ordinary feed and the one big profit maker.

More Eggs from Any Mash even Pratts

Experts call Pratts the best mash for layers. Yet we advise Regulating.

Mixing with the mash, 2 lbs. per 100, is simply an easy way to supply hens with Regulator. It doesn't take the place of feed. Feed can't take the place of it.

For this fine natural tonic acts directly on digestion, blood and egg-making organs.

Hens cackle and sing the whole day. They're industrious, red-combed, vigorous. We've proved on our own farm that Regulated hens get more heat, energy and egg ingredients out of the same feed.

A laying hen quickly wears out the minerals in her body. Regulating replaces minerals in abundance. Calcium, phosphates, iron, iodine, sulphur. In the easiest, simplest form. Things needed for eggs and health that experiment stations everywhere urge you to feed.

Regulating *pays!* Mix Regulator with the next batch of laying mash.

Pratts Poultry Regulator

55 years of success and fair dealing behind the Pratt guarantee. See your dealer for a money-back trial of any Pratt remedy.

GARDEN AND TRUCK

GILBERT S. WATTS, Editor
Logan Spring Farm

Farm Crops Are Now in Storage

WE HAVE been fall plowing and hope to be able to accomplish much more of this work before frost locks us out of the soil.

Why fall plow? Every gardening book gives a long list of reasons all of which are sound. Whatever those reasons all may be it gives a fellow a mighty satisfactory feeling to know that he has plenty of well-plowed acres awaiting only the harrow when springtime planting days arrive. The horses are hard now and will likely see a good many hours' exercise ahead of the plow in the next week or so. Meanwhile, the tractor eats nothing and rests awaiting those rush days beginning next April. Then it will work its 10, 15, 20 or more hours daily.

As one watches the furrow turn with winter only around the corner a savage satisfaction takes hold of him as he sees cut worms, wire worms, snails and other pests dislodged from their refuges. Weed seeds are exposed to alternate freezing and thawing. Some will not survive. The seed coats of others will be opened up so that they are likely to germinate more quickly in the spring and great numbers may be killed by the harrow before crops are planted.

• • •

On thousands of farms crops of all sorts are now in storage. Some may be lost through unavoidable circumstances. More will be lost through neglect, oversight and mismanagement.

Temperatures may rise too high or fall too low. In most cases temperature control can be worked out to at least some extent by variation in protection and ventilation.

Moisture conditions may go wrong. Perhaps additional ventilation should be given on bright days to reduce humidity. Less likely will it become necessary to sprinkle the floors of the storage room or to run water into the bottom of the celery trench.

Rats and mice rank high among causes of storage losses. Traps and poison are both cheap.

A few certain things happen often. Cabbage may be stored in too big a pile and through heating is likely to rot very soon. Or it stands in ventilated barrels or crates and shrivels and dries surprisingly. Beets, carrots and especially parsnips left in crates or baskets in the cellar or storage pit dry into veritable rubber-balls. Celery in the trench may be kept too warm, blight runs through like fire, soft rots set in and where a delicacy for Christmas dinner ought to be man finds mush.

• • •

As I sometimes do before sending material along for publication I read the foregoing to my wife in order to test the effect. At the close of the ordeal she remarked, "Those things happen from putting off until tomorrow what ought to be done today." Perhaps her thoughts were running close to home. However that may be, close attention today, everyday, will go far toward eliminating serious storage losses.

Set N. J. Farm Show Date

THE date for the annual Farm Products Show, Trenton, has been set for January 10-13 inclusive. Several hundred dollars have been provided for prize money for the best white and sweet potatoes, apples and corn. A champion prize of $25 for the best sweet potato exhibit tops the list. The state corn show will be a feature of the exhibit.—W.H.B.

Mr. Reist Accepts New Position

HENRY N. REIST, county agricultural agent of Warren County since 1915, succeeds Howard G. Niesley as agricultural economics extension specialist at the Pennsylvania State College. Mr. Niesley was recently chosen assistant director of agricultural extension work in Pennsylvania.

Mr. Reist is a native of Lancaster County. He was graduated from Penn State in 1913 and taught agriculture in a Minnesota high school for two years before going into county agent work. In 1923 he earned a higher degree in agricultural economics at the University of Wisconsin.

LIME AND plaster and fertilizing manure must be made to stimulate the sleeping energies of soils. Clover and other improving crops must restore to exhausted soils the vegetable matter so indispensable to fertility! Farmers must be invoked to push their inquiries to the extent of their capacity, and their experiments as far as prudent economy will permit it, and to make no other use of the good old way than to adhere to it until a better is pointed out.—From address delivered before the Pennsylvania State Agricultural Society by Hon. Andrew Stevenson of Harrisburg, in 1851.

They Get Ready for Next Year's Crop

JOHN R. MOORE and Son, of Chester County, Pennsylvania, are rapidly increasing their potato acreage. This year they dug and stored over 6000 bushels from fifteen acres, and propose to increase the acreage and yield next year. The illustration shows them plowing down a heavy growth of soy beans with a three-plow gang. The tractor, which is being tried out, is doing it easily, while a smaller tractor in use formerly would not do the job satisfactorily with only two plows.

Cramming Geese Not Profitable

Can you give me the method of stuffing ducks and geese for market and the length of time this will require?—J. N. M., Franklin County, Pa.

Geese to be crammed for market are put in small pens and fed five times per day by hand for a period of three weeks. One method is to feed soaked whole corn, propping open the bill with the thumb and finger of the left hand and doing the stuffing with the right. Another method is to make a stiff dough of two parts corn meal and one part middlings and sifted ground oats. This is made into rolls an inch thick and two inches long and boiled like dumplings, and the geese are crammed with these. As a rule, however, hand feeding is hardly profitable in this country on account of the labor cost. In Europe the work is done by old men or women who can no longer work in the fields and whose time is not valuable. Ordinary markets are satisfied with a goose that has been shut in a small pen and fed corn with some green feed such as apples or cabbage for a few weeks. Sometimes fatteners boil the corn. I always found that geese fatten better for the holidays than for Thanksgiving.—R. L. S.-H.

Better to Keep Only Few Guinea Roosters

I NOTE in the November 5 issue of Pennsylvania Farmer that Mrs. B. J. L. asks "How many guinea hens can be successfully kept with one rooster?" Your editor replies that in the wild state they mate in pairs. Also "It is customary to mate one guinea rooster with not over three or four hens." He also says that if too many hens are mated to one rooster the eggs may not be fertile.

The above answer is very indefinite and I am presuming that the editor really has no data at hand on this subject. I used to hear people say that guineas should be kept in pairs. Some years ago we had a flock of forty guinea hens and only three roosters. This flock laid many eggs. We set some of them. Just took them from the egg basket, and we had no trouble with infertile eggs. The guineas flocked together well and when a nest was found usually five or six hens laid eggs in the same nest.

If many guinea roosters are kept they are quarrelsome and spend most of their energy fighting one another or else the chickens. When only a few are kept they are not so much trouble and I feel sure that it is safe to mate a single male to twelve or fifteen hens. If only a few males are kept the hens will run in larger flocks and more hens will lay in the same nest. The nests are more easily found as the male bird will linger around the nest while the hens are on the nest.

Surplus roosters should be disposed of as soon as they can be distinguished from the hens. They will bring a better price when young. —A. J. Legg.

Feed Buttermilk for Cannibalism

Some tell me a dark cod liver oil is no good. Lighter oils cost from 25c to 45c more. We have 1000 birds and feed dry mash. How would you advise feeding the oil? Can you give any prevention for cannibalism? About 50 per cent of our losses from all causes are due to this cause. Very little is a result of prolapsis.—G. E. E., Bradford County, Pa.

Light oils are generally considered better than the colored oils, as the latter contain impurities that detract from their value. The best way to buy is to make sure that the oil you get has been tested for its vitamin content. You may add oil to the mash at the rate of one per cent, if the quantity will be consumed in a week, mixing the oil with a small quantity of the mash and adding this oily mash to the bulk, in order to facilitate incorporating the oil evenly.

Cannibalism is generally started by too close confinement or crowding, or by lack of sufficient animal protein in the ration. I have had success in controlling cannibalism by feeding heavily with condensed buttermilk, smearing it on the sides of the hoppers just as it comes out of the barrel.—R. L. S.-H.

Nest Box Notes

EGGS are mighty scarce articles at present, that is, the new laid kind. Some dealers are tempted to palm off storage eggs on their customers as the strictly fresh kind. This is a pretty poor trick. Aside from being dishonest, it is liable to react against the dealer, as a customer who is used to high class fresh eggs is not going to be fooled by the other kind. My private customers claim that they can distinguish between a strictly fresh henbury egg and a strictly fresh barnyard egg, to the latter's detriment. It is true that an egg produced on a modern poultry plant where wholesome mash and grain are fed will be of better quality than eggs laid by the flock running at large with the privilege of the barnyard and other choice locations. Most customers are willing to pay a small premium for the better article, once they realize the difference. It is good business for the poultryman to point out this difference.

• • •

Anyone who has plenty of cornstalks and a fodder cutter can make very good poultry house litter by running the former through the latter. Cut stalks do not break up as soon as straw or hay, but the material should be changed frequently for sanitary reasons.

• • •

Males selected for next season's breeders should be the best and most vigorous birds in the flock. They should be kept by themselves until the season begins, and be well taken care of. Mash and green feed should be given as well as grain. The male is often said to be half the flock, and he should receive the care his importance justifies. I have always found it advisable to pick out more males than are required. Some may die.

• • •

I set about 2500 plants of Penn State Ballhead cabbage the middle of July primarily as a source of winter green feed. Before setting, the ground had chicken litter disced in, and after the plants had started to grow they got a good side-dressing of fertilizer. We cut this cabbage early in November at the first freezing weather and had about 75 barrels of nice heads as hard as a rock. I expect to use the waste leaves remaining in the field until cold weather spoils them, after which there will be trimmings from the heads in storage. By making use of this waste material I can sell a good part of the heads and have all the green feed that is needed beside. In addition to the cabbage, we have pumpkins and waste apples for succulence.

• • •

While some green feed is essential in the ration, it is possible to overfeed. When this is done, the green feed takes the place of mash and grain in the birds' diet, with the result that they are likely to get thin and avoid the nests. About three to five pounds per day to a hundred birds is a sufficient quantity.

Hubby—Dear, will you give me a little salt for this egg?

Wifey—Salt? Why, Jack, I boiled it in salt water.

PAGE FENCE

America's first wire fence since 1883

3 generations know PAGE FENCE

Experience has taught them that Page quality is always uniform—and that it will give more years of service. Page Fence is free from flaws and weak spots. Only the best quality of wire is used and this is heavily galvanized to resist corrosion. It is easily erected over rough or hilly ground. Obtainable in either the Lion staple tie type or the new Page wrap stay type of knot.

Ask your dealer to show you—he carries the pattern you need.

free— Write for interesting literature describing Page Fence in detail.

Her Hens Lay All Winter

Mrs. Smith tells how it's done

"My neighbors couldn't understand why I got eggs all winter and they didn't," writes Mrs. Nannie Smith, Perryville, Mo. Her explanation will interest all poultry raisers. She says: "I was only getting 2 or 3 eggs a day from 36 hens. After using Don Sung, I got as high as 76 a day. Several of my neighbors have started using Don Sung since I showed them my eggs. In addition to laying well, my hens have been in good health ever since. My pullets had Don Sung and laid good all fall—better at their age than any pullets I ever had."

Don Sung, the Chinese egg laying tablets which Mrs. Smith used, are opening the eyes of chicken raisers all over America. The tablets can be obtained from the Burrell-Dugger Co., 157 Postal Station Bldg., Indianapolis, Ind. Poultry raisers whose hens are not laying well should send 50 cents for a trial package (or $1 for the extra large size, holding three times as much). Don Sung is positively guaranteed to do the work or money promptly refunded, so it costs you nothing to try. Right now is the time to start giving Don Sung to your hens, so you will have a good supply of fresh eggs all winter.

Safe for Keeping—Safe for Eating

Let Our New Leaflets Help You in Preserving a Year-Round Meat Supply

TO HELP you with the important work of preserving meats, we have prepared two Homemakers' Leaflets. One describes the job of cutting and preparing the meat and gives recipes for its preservation. It is much better to be safe than sorry. Do not spoil your sausage or corned beef with too much of this and too little of that. Send for the leaflet, "Curing of Meat on the Farm."

Many folks today are serving their finest cuts of pork in the midst of the summer's rush. This is made safe and possible by canning chops and roasts at butchering time. A leaflet named "Canning Meats" will cover your needs for that work. Methods, recipes and time tables for use of either the Water Bath or Pressure Cooker are included in this leaflet. A variety of methods for beef and pork are given attention.

The U. S. D. A. recommends a steam pressure cooker for meat canning

General canning instructions are treated in our leaflet "Secrets of Successful Canning."

Any one or all of these leaflets will be sent on receipt of a self-addressed, stamped envelope. Don't delay, but mail your request today, to Household Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

Vote for Cleanliness and Veto Colds

BETWEEN the last rose of summer and the first sneeze of winter, lies the season when men and women vote on the question: "How many colds am I going to have this year?"

Dr. W. W. Peter, internationally known health educator, and associate secretary of the American Public Health Association says it is carelessness, as much as any other factor, which causes the large number of colds from which the public suffers. Out of every hundred persons there are always from ten to fifteen who have a cold. Most persons indulge in from one to three colds a year.

"Colds are communicable from person to person, as are typhoid fever, diphtheria, and a host of other diseases. Ordinarily they do not make the victim sick enough to stay at home, so he goes about his daily business mingling freely with others and spreading the disease. A severe cold, confining the patient to his bed, may be harder on him but it is better for his friends and neighbors."

One of the first rules for escaping colds, Dr. Peter points out, is to avoid infection by being scrupulously clean.

Avoid Colds by Simple Rules

Wash your hands before eating or handling food.

If you must shake hands with persons who have colds, be sure to wash your hands afterwards.

Keep away from common drinking cups, roller towels, pipes, pencils and other objects contaminated with fresh secretions.

The dishes from which you eat may carry the infection from some other member of the household. The homemaker should recognize it as one of her major responsibilities, if one of the family has a cold, to see that his dishes are washed in hot soapy water and well scalded. All dishes should be so treated, as a matter of every-day sanitation, but it is particularly important with an infection which is carried through nose and mouth secretions.

In advising frequent washing of the hands to avoid infection, we mean thorough cleansing with soap and warm water, and not a perfunctory wetting of the fingers.

Behind all these precautions should be the defense of good health, built by sound habits of eating, exercise, rest and fresh air. In "catching" a communicable disease, two factors are involved. One is the invading power of the bacteria, the other is the resistance of the invaded person.

"If you take cold, in spite of all precautions, be your own policeman," Dr. Peter urges. "Protect others by keeping away from them, especially during the early stages of the attack. Be careful, be clean, be considerate."

Magic of Color Lightens Gray Days

IT IS high time to brighten up the interior of the house now for winter will soon be with us.

I have painted the insides of my cupboards a fresh straw yellow and I cannot describe the warming happiness I feel whenever I open a door on gray days. The oil stove not used in winter has been transformed into a very good table for house plants. First, I moved it to a bright south window in the dining room. I covered the top thickly with newspapers and laid a discarded table leaf on top of them.

Plants Bloom on Oil Stove

It formed a fine plant stand and I now have a red leaf begonia and two pink flowering begonias decorating that window. You will find there also a tiny leaved plant with drooping habits. Some call it "angel's tears."

In the living room I have quaint brown pots filled with graceful bouquets of bitter sweet and ground pine. I have for a change some dried grasses and wild flowers.

On dull days get out your colorful dishes and serve the dinner in unusual fashion. Let a bit of color add zest to the winter appetites.—Arena A. Kern, Pa.

New England Clam Chowder

A REAL treasure was hidden away in a drawer in the old kitchen cupboard—a recipe book, a bit yellowed with years and frayed at the corners with generations of thumbing. The most thumb-marked page in the entire book bore the secret—and we're passing it along to you. It was penned in fine handwriting and bore the enticing name of New England Clam Chowder.

Cut fine one-eighth pound of salt pork. Fry this with one medium-size onion, sliced. Add one and one-half cups potatoes cut in small cubes. Let brown a few minutes and then add one-half teaspoon salt, one-eighth teaspoon pepper, one-eighth teaspoon celery seed, a pinch of thyme and one cup of water. Simmer until the potatoes are almost tender. Add one cup of chopped clams (these are available today in a small can) and one tablespoon of flour smoothed with two cups of milk. Stir until slightly thickened. Add three-fourths cup of clam liquor last, so that there will be no danger of curdling the milk. Serve with plain or pilot crackers. This will serve four persons.

Thanksgiving

By JANE CARPENTER

"MOTHER, why do they call it 'Thanksgiving'?" asked five-year-old Billy who with his brother Bob stood watching Mother make pumpkin pies.

Mrs. Horton felt very much tempted to send her boys to their playthings, promising a Thanksgiving story in the evening—she had so much to do—but she resisted.

"Many years ago," she began, "when our country was very young, the people often did not have enough to eat."

"That was the Pilgrims, wasn't it, Mother?" broke in nine-year-old Bob.

"Why didn't they go to the store and buy something?" asked Billy.

"Weren't any stores, were there, Mother?"

"Only one storehouse, and that was about empty," said Mother. "So in the spring the Governor appointed a fast day. The people were not to eat all that day but were to go to church and pray that the seeds which they planted would yield a good harvest. Their prayers were answered; they had a wonderful harvest. So then the Governor appointed a day of Thanksgiving. On that day, the people went to church and thanked God for his goodness and then they had a great feast."

"They invited the Indians, too, Mother, didn't they?" said Bob.

"Yes, the Indians had been very kind to them. In those hungry days they had shown them how to fish through the ice and, later, how to use the fish as a fertilizer for their corn and how to girdle the trees to let the sunlight in on their crops. So the Pilgrims invited the Indians to feast with them and to help them thank God for the harvest."

"What is a harvest?" asked Billy.

"Don't you remember," said Bob, "when we planted the nasturtium seeds? They sprouted and grew, and grew, until they had lovely flowers."

"And after the flowers came seeds, just like the ones you planted," added Mother. "That was the harvest."

"And did the Pilgrims eat the seeds?" asked Billy. I wouldn't like to eat seeds."

"But you do eat seeds," said Bob. "Cereals and beans and corn are seeds, aren't they, Mother?"

"We wouldn't be hungry without them though," said Billy. "We could eat pumpkin pie. It would be fun to have to eat pumpkin pie for breakfast."

As I said before, Mother was very busy. It didn't seem as if she could take time to stop and explain. Her housekeeper-urge said; "Put it off." A pedagogical warning said, "The situation will not recur." Her mother-wisdom decided the matter: "I cannot use ten minutes to better advantage."

So while the pies were baking she got out some pictures and showed the boys the history of a grain of wheat. She could not find a picture of growing pumpkins but she did find squashes, which answered the purpose.

She felt fully repaid when Billy finished his evening prayer that night by saying, "And thank you very much for the harvest."

Good books are the best of good companions for children.

OUR HOME PAGE

Conducted by

Mrs. GERTRUDE S. STEWART

Safe for Keeping—Safe for Eating

Let Our New Leaflets Help You in Preserving a Year-Round Meat Supply

TO HELP you with the important work of preserving meats, we have prepared two Homemakers' Leaflets. One describes the job of cutting and preparing the meat and gives recipes for its preservation. It is much better to be safe than sorry. Do not spoil your sausage or corned beef with too much of this and too little of that. Send for the leaflet, "Curing of Meat on the Farm."

Many folks today are serving their finest cuts of pork in the midst of the summer's rush. This is made safe and possible by canning chops and roasts at butchering time. A leaflet named "Canning Meats" will cover your needs for that work. Methods, recipes and time tables for use of either the Water Bath or Pressure Cooker are included in this leaflet. A variety of methods for beef and pork are given attention.

General canning instructions are treated in our leaflet "Secrets of Successful Canning."

Any one or all of these leaflets will be sent on receipt of a self-addressed, stamped envelope. Don't delay, but mail your request today, to Household Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

The U. S. D. A. recommends a steam pressure cooker for meat canning

Vote for Cleanliness and Veto Colds

BETWEEN the last rose of summer and the first sneeze of winter, lies the season when men and women vote on the question: "How many colds am I going to have this year?"

Dr. W. W. Peter, internationally known health educator, and associate secretary of the American Public Health Association says it is carelessness, as much as any other factor, which causes the large number of colds from which the public suffers. Out of every hundred persons there are always from ten to fifteen who have a cold. Most persons indulge in from one to three colds a year.

"Colds are communicable from person to person, as are typhoid fever, diphtheria, and a host of other diseases. Ordinarily they do not make the victim sick enough to stay at home, so he goes about his daily business mingling freely with others and spreading the disease. A severe cold, confining the patient to his bed, may be harder on him but it is better for his friends and neighbors."

One of the first rules for escaping colds, Dr. Peter points out, is to avoid infection by being scrupulously clean.

Avoid Colds by Simple Rules

Wash your hands before eating or handling food.

If you must shake hands with persons who have colds, be sure to wash your hands afterwards.

Keep away from common drinking cups, roller towels, pipes, pencils and other objects contaminated with fresh secretions.

The dishes from which you eat may carry the infection from some other member of the household. The homemaker should recognize it as one of her major responsibilities, if one of the family has a cold, to see that his dishes are washed in hot soapy water and well scalded. All dishes should be so treated, as a matter of every-day sanitation, but it is particularly important with an infection which is carried through nose and mouth secretions.

In advising frequent washing of the hands to avoid infection, we mean thorough cleansing with soap and warm water, and not a perfunctory wetting of the fingers.

Behind all these precautions should be the defense of good health, built by sound habits of eating, exercise, rest and fresh air. In "catching" a communicable disease, two factors are involved. One is the invading power of the bacteria, the other is the resistance of the invaded person.

"If you take cold, in spite of all precautions, be your own policeman," Dr. Peter urges. "Protect others by keeping away from them, especially during the early stages of the attack. Be careful, be clean, be considerate."

Magic of Color Lightens Gray Days

IT IS high time to brighten up the interior of the house now for winter will soon be with us.

I have painted the insides of my cupboards a fresh straw yellow and I cannot describe the warming happiness I feel whenever I open a door on gray days. The oil stove not used in winter has been transformed into a very good table for house plants. First, I moved it to a bright south window in the dining room. I covered the top thickly with newspapers and laid a discarded table leaf on top of them.

Plants Bloom on Oil Stove

It formed a fine plant stand and I now have a red leaf begonia and two pink flowering begonias decorating that window. You will find there also a tiny leaved plant with drooping habits. Some call it "angel's tears."

In the living room I have quaint brown pots filled with graceful bouquets of bitter sweet and ground pine. I have for a change some dried grasses and wild flowers.

On dull days get out your colorful dishes and serve the dinner in unusual fashion. Let a bit of color add zest to the winter appetites.—Arena A. Kern, Pa.

New England Clam Chowder

A REAL treasure was hidden away in a drawer in the old kitchen cupboard—a recipe book, a bit yellowed with years and frayed at the corners with generations of thumbing. The most thumb-marked page in the entire book bore the secret—and we're passing it along to you. It was penned in fine handwriting and bore the enticing name of New England Clam Chowder.

Cut fine one-eighth pound of salt pork. Fry this with one medium-size onion, sliced. Add one and one-half cups potatoes cut in small cubes. Let brown a few minutes and then add one-half teaspoon salt, one-eighth teaspoon pepper, one-eighth teaspoon celery seed, a pinch of thyme and one cup of water. Simmer until the potatoes are almost tender. Add one cup of chopped clams (these are available today in a small can) and one tablespoon of flour smoothed with two cups of milk. Stir until slightly thickened. Add three-fourths cup of clam liquor last, so that there will be no danger of curdling the milk. Serve with plain or pilot crackers. This will serve four persons.

Thanksgiving

By JANE CARPENTER

"MOTHER, why do they call it 'Thanksgiving'?" asked five-year-old Billy who with his brother Bob stood watching Mother make pumpkin pies.

Mrs. Horton felt very much tempted to send her boys to their playthings, promising a Thanksgiving story in the evening—she had so much to do—but she resisted.

"Many years ago," she began, "when our country was very young, the people often did not have enough to eat."

"That was the Pilgrims, wasn't it, Mother?" broke in nine-year-old Bob.

"Why didn't they go to the store and buy something?" asked Billy.

"Weren't any stores, were there, Mother?"

"Only one storehouse, and that was about empty," said Mother. "So in the spring the Governor appointed a fast day. The people were not to eat all that day but were to go to church and pray that the seeds which they planted would yield a good harvest. Their prayers were answered; they had a wonderful harvest. So then the Governor appointed a day of Thanksgiving. On that day, the people went to church and thanked God for his goodness and then they had a great feast."

"They invited the Indians, too, Mother, didn't they?" said Bob.

"Yes, the Indians had been very kind to them. In those hungry days they had shown them how to fish through the ice and, later, how to use the fish as a fertilizer for their corn and how to girdle the trees to let the sunlight in on their crops. So the Pilgrims invited the Indians to feast with them and to help them thank God for the harvest."

"What is a harvest?" asked Billy.

"Don't you remember," said Bob, "when we planted the nasturtium seeds? They sprouted and grew, and grew, until they had lovely flowers."

"And after the flowers came seeds, just like the ones you planted," added Mother. "That was the harvest."

"And did the Pilgrims eat the seeds?" asked Billy. I wouldn't like to eat seeds."

"But you do eat seeds," said Bob. "Cereals and beans and corn are seeds, aren't they, Mother?"

"We wouldn't be hungry without them though," said Billy. "We could eat pumpkin pie. It would be fun to have to eat pumpkin pie for breakfast."

As I said before, Mother was very busy. It didn't seem as if she could take time to stop and explain. Her housekeeper-urge said; "Put it off." A pedagogical warning said, "The situation will not recur." Her mother-wisdom decided the matter: "I cannot use ten minutes to better advantage."

So while the pies were baking she got out some pictures and showed the boys the history of a grain of wheat. She could not find a picture of growing pumpkins but she did find squashes, which answered the purpose.

She felt fully repaid when Billy finished his evening prayer that night by saying, "And thank you very much for the harvest."

TIGHT BINDING INTENTIONAL SECOND EXPOSURE

ATWATER KENT RADIO

Let's go to the city tonight

WE ALL need a change. Let's go to the city tonight. We'll listen to the dinner music at a big hotel: then a concert for a while. A violinist who makes a fortune every time he appears will play for us. A male quartet will sing the songs of long ago.

An adventurer, just back from strange lands. A comedian with some new jokes. The new fashions reported for women. Dance music for those who like it—

Pretty expensive, if the family actually did go. But think of it! Just a half-turn of the Atwater Kent ONE Dial brings your choice of the worth-while diversions of the great cities—right in your own comfortable home, with your own comfortable bed awaiting you when you've had enough.

Things to amuse when you're tired, to soothe if you're out of sorts, to help you in your work, to keep youngsters happy at home and the old folks entertained.

Why is it that almost every good dealer advises you to buy Atwater Kent Radio? He could make more money on others. He could tempt you with lower prices. He could sell you sets costing three or four times as much.

But he knows that Atwater Kent Radio will give you *everything* and will never fail you. He knows you will be *satisfied*—as more than a million Atwater Kent owners have been satisfied.

Full pails come from healthy cows

The power to digest liberal quantities of heavy foods—the energy to assimilate and turn into milk all the milk-values of the winter diet is all that is needed to produce heavy yields during the period of barn-feeding.

Kow-Kare makes heavy winter feeding profitable—and safe. It is not a food—it simply regulates and conditions the cow's digestion and assimilation so that she can efficiently handle her natural diet—at a profit. Kow-Kare is highly concentrated. Only a little is needed to keep average cows *above* average yield. A tablespoonful with the feed one to two weeks a month does worlds for the milk flow—and for the general health and power to resist disease. The cost is only a few cents per month per cow.

When there is real trouble, when profits are threatened by such disorders as Barrenness, Retained Afterbirth, Abortion, Scours, Bunches, Milk Fever and similar troubles Kow-Kare comes to the rescue quickly and surely. Thousands of dairymen would not keep cows without this effective regulator and remedy.

Condition Cows for Calving

For safely freshening cows, for vigorous calves and freedom from disorders Kow-Kare gives just the needed aid to cows. Feed a tablespoonful with the feed two or three weeks before and after calving. Your druggist, general store, or feed store will supply you. Large size $1.25 (a size and $2.25. Small size 65c. Send for free book, "More Milk from the Cows You Have." Contains many valuable dairy hints.

US GOV'T JOBS

Pay $135 to $170 weekly. Men, Women, 18-55. Home or elsewhere. Big List and "How to Qualify" mailed Free. Ozment's Instruction Bureau, 311 B. Last, St.

If Dressmaking Fascinates You—

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5969.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size will require 2⅞ yards of 40-inch material together with ⅞ yard of contrasting material for facing cuffs and girdle as illustrated. Pattern, 10 cents.

4825.—One size. The dress will require 1½ yard, the petticoat 1½ yard, the sack ⅜ yard and the bonnet ⅛ yard of 32- or 36-inch material. Pattern 10 cents.

Send 10c in silver or stamps for our up-to-date fall and wister 1927-1928 Book of Fashions.

Do They Move Easily?

HOW many articles in your home can be moved about on casters? Perhaps only the few that were so equipped when you purchased them. Try the following as labor savers.

A play box for baby, made by taking a good-sized box, padding over the edges and on the inside with an old quilt and lining and covering with inexpensive print, silkolene or cretonne. Put a caster in each corner so that it can be moved from room to room wherever your work happens to be.

Four casters in the bottom of the heavy box on which you set your wash tub. A box of this kind is better than a bench if one tub is used.

If you have heavy chairs or sofas put casters under each piece for convenience in moving on sweeping days.—L. M. T.

Two Timely Recipes

PUMPKIN BUTTER

TO FOUR quarts of cooked pumpkin pressed thru a sieve add one quart of maple syrup or very best molasses, one-quarter ounce each of ground allspice, cinnamon, and cloves. Cook over a hot fire until it becomes like jam.

Another good recipe calls for two pounds of cooked, sieved pumpkin, two cupfuls sugar, two tablespoons butter, and the grated rind of one lemon. Cook until thick.

CRANBERRY PIE

1 cup cranberries
½ cup raisins
½ cup cold water
½ cup sugar
2 tablespoons flour

Cut cranberries in halves and seed and cut up the raisins. Mix the flour with the sugar and mix in other ingredients. Bake in two crusts or else one with a pastry lattice work over the top.

Guard Your Savings!

WHEN you have surplus funds to invest, play safe! Invest in Federal Land Bank Bonds—*safer than any single first farm mortgage.* Back of these Bonds are mortgages on more than 400,000 farms valued at over twice the amount loaned upon them. The prompt payment of principal and interest is guaranteed jointly by the twelve Federal Land Banks with combined capital and reserves of more than $70,000,000.

NEY

Your Cows Will Give Richer Milk

WATER Bowls and other Sanitary Barn Equipment makes for healthy, happy cows. And healthy, happy cows give richer milk. Milk that brings you more money.

The cost of modern dairy barn equipment—Ney equipment is very small compared to the added milk-profits. It is a common experience of progressive farmers to pay for their equipment out of a few month's profits.

Save time and labor by installing Ney Dairy Barn Equipment now. Sold by reputable dealers everywhere. Write us today for your copy of the Ney Catalog No.—84—and name of dealer ready to serve you.

THE NEY MFG. CO. • *Canton, Ohio*
Minneapolis, Minn.; Council Bluffs, Iowa
Established 1879
Complete Dairy Barn Equipment including stalls, stanchions, water bowls, pens, litter carriers, "King" ventilators, etc. Complete line of Poultry fixtures including fount sanitizers, hay forks, hay knives, etc.

Pay $35 to $70 weekly. Men, Women, 18-55. Home or elsewhere. Big List and "How to Qualify" mailed Free. Ozment's Instruction Bureau, 371 B. Loan, Bldg.

TIGHT BINDING INTENTIONAL SECOND EXPOSURE

OUR YOUNG PEOPLE'S FORUM

Peter Isn't Anxious

DEAR FORUM BOYS AND GIRLS:—When you read this letter I'll probably be busy correcting your contest papers for the Treasure Hunt. I'll announce the prize winners as soon as I possibly can for I don't want to keep you in suspense.

Here we are around to Thanksgiving already. Our turkey, Peter, doesn't seem to be quite as anxious as we do for the day to dawn, does he? Even though Peter may not be eagerly looking forward to Thursday I do believe he is truly thankful for the care bestowed on him, the shelter provided for him and the food given to him, don't you? You and I have so many things to be thankful for that it would be impossible for us to write a list of them. I'm afraid if we tried to do so we would be kept busy until this time next year.

When I mentioned the word "list" I remembered that several Forum friends have asked for a Word List Contest. This is just the time to have one. I'll give you the word THANKSGIVING. Take this and see how many different and shorter words you can find. For instance, you can find "tan" and "ant" and ever so many more. It will be lots of fun.

Just as soon as you complete your list send your contest paper to The Forum Editor, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa. Be sure to tell me how old you are for there will be a prize for the Forum friend over twelve finding the greatest number of words and likewise one for the Forum friend under twelve finding the greatest number. All contest papers must be mailed so as to reach me by December 3rd. I wish you luck.

THE FORUM EDITOR.

From Forum Members and Friends

Dear Forum Editor:—Hello! May I come into your "Riddle Corner?" Here are some riddles:

1. When is beef the highest?
2. What goes up and down and touches neither earth or sky?
3. What goes around the house and peeps in every hole?
4. Red on the outside and black on the inside four corners around about.—Sarah Gongaware, thirteen (X), Allen County, Ind.

Dear Forum Friends:—I received my membership pin. It is very nice. My sister and I were on a visit to Johnstown for about three weeks. We saw where the people were buried after the flood. It is pretty long around the cemetery. There are other people buried there, too.

We have three kittens. We call them Spike, Barny and Blackjack. I take music lessons every Monday at 2:00 o'clock.—Faye A. Lamberson, (X), Fulton County, Pa.

Are you kept very busy at school these days?

THE FORUM EDITOR.

MY BROTHER, JOHN
Mary Burkholder, Lancaster Co., Pa.

Dear Forum Editor:—I like to go to the movies, but I do not get to go very often so my friends and I have a little show of our own. There are three of us, all professional actresses, we think, and we call ourselves "The Merry Triplets." Our theatre is down in a small cellar. The stone steps into the cellar are the seats for the audience which includes our mothers and sisters. In front of the steps is a rather long passageway into the cellar. This is our stage. The cellar behind the passageway is our dressing room and is separated by a curtain. After awhile, when we get rich, we are going to buy a real pretty curtain, but now we use plain burlap.

Now, I want you to pretend you are sitting in the audience and have paid your three cents admission. Back in the dressing room we hustle to get into our costumes which consist of some old fashioned dresses found in the attic.

Then, in our costumes, we go out on the stage. Fay Kirkpatrick, first; Elizabeth, my sister, next, and myself last. We sing our opening song which we made up ourselves, but would take up too much room in my letter.

Our orchestra plays a few selections next, as well as can be done on mother's old kettle, pie tin and a banjo which my sister made of strings of wire stretched tight across a board.

We have a few dialogues. We act jokes out which we find in the paper.

We sing and dance to some of the new songs we hear over the radio. We do not pay much attention to the tune as long as we know the words.

After that comes our stunts which are many and interesting.

We then have our closing song, which we also composed. It is sung to the tune of "Good Night Ladies."

I wish sometime you would come to our show.—Margaret Andrew, (X), New Castle County, Del.

You really must have some very interesting performances. I enjoyed your letter and I'm sure your Forum cousins will, too. Are you arranging to have something special for Thanksgiving day?

THE FORUM EDITOR.

Dear Forum Friends:—We have two horses and a colt. I like the horses. Last year I went to the consolidated school of Eastbrook. I have a pet cat. It is black and white. It is very wild.—Joe Cwynar, (X), Lawrence County, Pa.

MIRIAM MARTIN,
Washington County, Md.

Do You Like to Quilt?

HERE is another illustration of a block for the Colonial History Quilt pictured in our November 5 issue. This is but one of the twenty blocks included in the pattern. The Colonial History Quilt makes a very charming and practical Xmas gift, or, you may want to make one for yourself. You'll find no difficulty in making the quilt for complete instructions are given. There are twenty blocks furnished, each eight inches square, and they are printed on hot-iron transfer patterns by means of which you can stamp them on squares of white muslin. After the design is embroidered in outline stitch, the twenty blocks are set together. The twenty transfer patterns in one package, with instructions for making, will be mailed postpaid upon receipt of 50 cents. Address orders to Editorial Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

Dear Forum, Editor:—We have received Pennsylvania Farmer for quite a number of years. I like to read the Forum page. We have 3 horses, 4 cows, 21 pigs and about 200 chickens. We have about 12 acres of corn and have about one-half of it cut.

During vacation I helped mother but now I have to go to school. I am sending a recipe for butterscotch cookies.

BUTTERSCOTCH COOKIES

2 cups of brown sugar
½ cup of butter
2 eggs
6 tablespoons of sweet milk
1 teaspoon baking powder
1 teaspoon of soda
2 cups of flour
2 cups of oat flakes

Mix together and let stand one hour, then roll out and bake.—Alice Rhea, twelve, Indiana County, Pa.

Dear Forum Friends:—This is my first letter to the Forum page. My brother has a cat named Fussy. She has baby kittens. We have four other cats that are half grown. There is a black one, a gray one and two tabby ones. I like the gray one best because he is mine and more friendly. We have a dog named Lassie. My daddy has 30 acres of potatoes. I helped him sort them. He has six acres of tomatoes, two acres of peppers and four acres of sweet corn.—Eleanor Prudence Ewing, ten, Cumberland County, N. J.

I'm sure you were a great help to daddy when you sorted the potatoes.

THE FORUM EDITOR.

Dear Forum Editor:—I go to the Hellam High School. I have about four miles to go to school and I come home every evening. We have five cows and about 300 chickens. We also have three mules.—Sadie A. Paup, (X), York County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—It seems everybody is interested in the price of things. You know what your mother is saving up her egg money for and how dad tries to have his crops yield at just the right time for a good sale. Often the weather has to do with the ups and downs of the market price of things. But in the city, at least, and probably in the country, too, there is one particular product that goes up during stormy seasons. You can find out what this is if you will read the little story below and notice what letters are left out. I see a word spelled "tecner" along toward the end of the story, and that must mean "teacher," so one of the letters you will find is "A," the letter omitted from the word "teacher." When you have found these letters place them in the order that they should appear in the story and you will know something that it is a good idea to have on hand when rain and snow begin to fall. Let me have the name of this product on a postcard or in a letter by December 3rd. Please tell me your name, post office address, the name of your county, when your birthday comes and how old you are. The prizes go to the ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

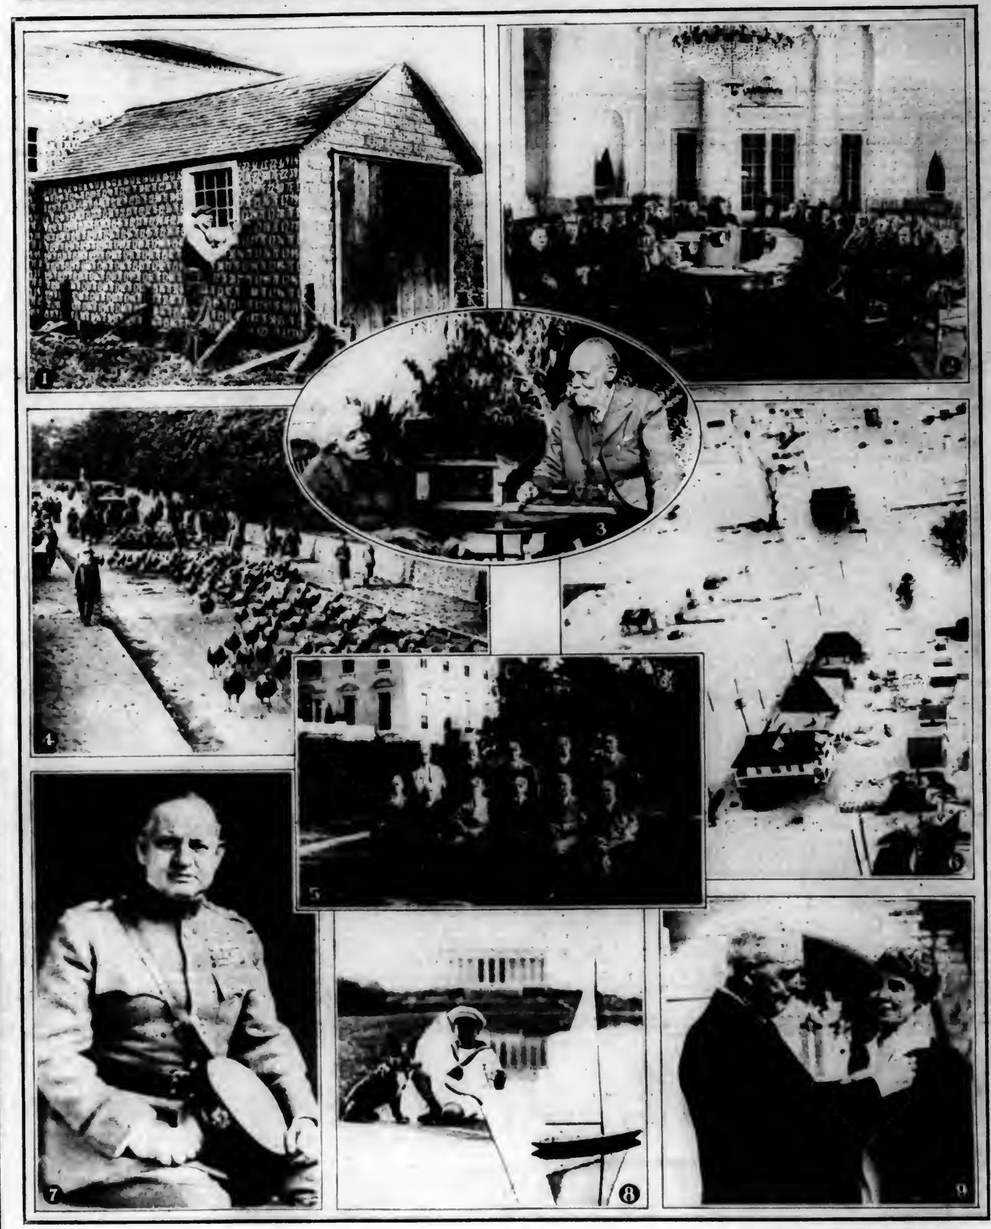
The answer to the puzzle in the November 5 issue (the word-ladder) is: FOOT, BOOT, BOAT, BEAT, BEAD, HEAD.

The prize winners are: Ellsworth Adams, age 9, Marlinton, W. Va.; Mary Jane Derschel, age 9, Spartansburg, Pa.; Bernadine Frankhouser, age 8, Allentown, Pa.; Mary Fretz, age 12, Ottsville, Pa.; Marcella Marischink, age 12, Vineland, N. J.; J. Isabell Swabb, age 12, Spring Mills, Pa.; Catharine C. Thomas, age 10, Hatboro, Pa.; Frank F. Ulsh, age 10, McVeytown, Pa.; Orville Whitemore, age 8, Callicoon N. Y.; Edwin Wilson, age 9, New Sheffield, Pa.

GOING UP!

Johnnie was very hungry when he came down to breakfast. He ate his frit and drank his glass of ilk and finished his bread and butter to the last crum. Mother said: "Come, Johnny, get eady for school. You had better wear your ovrshoes, for the ane is muddy this morning." Johnnie hurried along and reached schoo in time. His techer told him that she was glad he had studied his lessons so well.

PASSING EVENTS IN PICTURES



1.—A New York farmer has found a unique method of utilizing unused license tags.
2.—The Governing Board of the Pan-American Union in session.
3.—Here is an ancient telephone, claimed by the inventor, W. W. Schock, to be the first one ever put into use.
4.—A Thanksgiving parade—of turkeys on their way to market.
5.—President Coolidge and his Cabinet as it is now constituted photographed on the White House grounds.
6.—Homes in Cromwell, Conn., were completely isolated when the Connecticut River overflowed during the recent flood.
7.—Major General John A. Hull, Judge Advocate General of the Army, who is being considered for the appointment of Governor-General of the Philippines to succeed the late General Leonard Wood.
8.—John Hull, son of Major General Hull (see No. 7), and his "first mate" sailing his ship near Lincoln Memorial.
9.—Judge John Barton Payne, president of the American Red Cross, putting a Red Cross button on Mrs. Coolidge at the beginning of the annual membership drive.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

AS I CAME nearer, I could see that these men were not unlike some of those in the army of Regulators. They wore no uniform, and for a mark of identification, only wore a sprig of oak in their hats. Each had a pistol in his belt, and a rifle across the saddle in front of him.

Both watched me intently as I approached, and I, for encouragement, waved my arm and shouted something indistinct. In a minute, I was within twenty yards of them, and then, altho their position did not change, I noticed something curious about it. They still looked toward me, but with the air of men suddenly frozen in a pose.

Then with a clatter both rifles dropped to the ground, and four arms rose slowly in the air. Still with hands in the air, the sentries began the business of dismounting.

"Hold the hosses' heads for the gentlemen," came a voice from the woods to the left. "You, Tom, keep a bead on the big fellow. Alec, watch the other one. Two of you keep your eyes peeled down the road."

I held the horses' heads, and the men dismounted. Jennings was by their side in an instant and took the pistols out of their belts.

"Get agoing," he directed, and they started off down the road at an unwilling trot.

"We'll take these shooting irons along," commented Jennings." None of 'ems much good, but they beat muskets. Put that pistol in your belt and hang on to this rifle. It's the best. Now get your legs over that sorrel and we'll travel."

WITH that we were plunging down the road. We looked for another outpost, but none appeared. The six miles to camp went past us like the wind. In a few minutes, we were galloping into the midst of the Regulators' camp and men were jumping up from camp fires and rolling out of blankets to run toward us.

"Tryon's a coming," yelled Jennings. "Get your guns and tree yourselves."

A man on horseback came pelting up.

"Hunter wants you," he cried. "Come on."

We followed him. A group of men were talking around a fire. I recognized Hunter, Husband and Dr. Caldwell. They looked up as we approached.

"They're on the march now," Jennings reported. "Get ready to start shooting."

The men looked at Caldwell. He was frankly worried.

"I saw His Excellency last night," he declared. "I thought he was going to wait and try negotiations. Well, I can but try again."

"When he sees our number he'll think better of it," said Hunter hopefully.

Caldwell shook his head. "Maybe. I doubt it. I'd better start. Will any come with me to speak for you? You left my congregation Mr. Hunter, because I was not enough of a Regulator for you. Perhaps someone else would state your case better."

"We'll meet him between the lines," Hunter promised. "Tell him that. We demand only that the fees we have been robbed of be paid back and that rascals like Fanning be punished."

Another man spoke up. "I'll go," he said. "A good stiff talk now may bring him to reason."

"Not too stiff," cautioned Caldwell. "That's one, Thompson. Anybody else. Mateer? That's enough then. The three of us will try it. Don't be drawn into a fight."

THEY mounted and rode off. Apprehensive looks followed them.

"They won't come back," said one. "Better get ready to fight now."

The group moved off toward the front. They were arguing among themselves. I took it for a bad sign.

Jennings and I took our horses well to the rear and tied them.

"Not much use," said he. "The first fellow that gets scared will take them. But we can't fight from horseback. Come on, let's get back where we can do some damage. If I just had a little more powder now—wasted too much sky larking yesterday."

"Where's that wagon?" I asked. "There ought to be a fair amount for everybody that's armed."

We set out to hunt for the powder supply. Nobody had seen the wagon and everyone talked as if he were short of ammunition. Up to the front, men were stringing out in a long line at right angles to the road. I noted that the unarmed men were in line, too, and marveled at their unconcerned air.

"Guess when the governor sees how may of us there be, he'll turn right around and start back," said one of these.

"Spread out so he can see us all," advised another. "I reckon he'll think better of it."

We ran across Krafft shortly. At mention of the powder, he broke out into a string of curses.

"Nobody knows where it is," he declared. "Some fool has sent it on the wrong road. We've got two or three hundred good shots here, and with enough ammunition, we could make it hot for the militia after these fools run. But nobody's got enough powder for more than a few rounds."

Jennings pointed.

"There's one that has more," he declared. A tall, lean fellow with tremendously big hands was leaning on his rifle nearby. Three powder horns were hung over his shoulders. A man approached and asked for the loan of some powder. He shook his head.

"I reckon to shoot all this up myself," he declared. "Ought to bring your own powder and ball to a shooting match."

"I know dam," Krafft whispered. "Pugh, a gunsmith and a crack shot. A few more like him and we'd have no trouble."

We were standing where the Regulators had their main line. Up a hundred yards or more to the front where an old field made an open space in the timber a number of men—perhaps two hundred—were moving about. Now we saw some of them turning towards us. From beyond them, a bugle sounded.

"Here they come," cried Jennings, "now we'll see."

Followed by Krafft and me, he ran to an oak on a knoll to the right and swung himself into its branches. We stayed below to strain our eyes to the east and keep our ears a stretch for his comments.

They were coming all right, Jennings said. He could see the head of the column. Halted now, by cracky. No, they were spreading out to right and left. Guns in the center. Six of them,—no, ten. Quite a lot of men, too.

"Watch our fellers a comin' back," he exclaimed suddenly.

We looked. The Regulators in front of the line were dropping back, by groups. There was no firing. As they came back to us, we could see the militia beyond.

They were not very impressive looking. Few had uniforms. Yet they were in military formation and they had arms. The small field pieces in the center loked formidable, though they were not yet in position to fire.

The line came on steadily. About one hundred yards from us, it halted. The troops on the right and left grounded arms and stood fast. In the center, the guns were turned about and aimed at the Regulators' ranks. A moment's silence followed.

FROM the Regulators' lines came a hoot. Cat-calls and jeers followed. The long line broke forth into a crackle of invective.

"What you waitin' for?" "Come out to lick us, did ye? Wall, start in." "Look at the soldier boys. Whar's Tryon?"

Krafft nudged me. He pointed to a man on horseback who rode up and down behind the lines on the left bank of the militia.

"Fanning," he said. The whisper ran down the line. Riflemen began falling back and moving to our right. Jennings, Krafft and I followed them. Pugh came, too.

Two men on horseback came forward from the ranks of the militia. Half way between the ranks they stopped and one, holding up a paper, began to read something. Calls of derision drowned his words.

"Reading the riot act," Krafft informed me. "The governor is going to do this legal."

The magistrate, for such I suppose he was, rode back. As the lines closed in behind him, another came out. As he came nearer, I saw it was Dr. Caldwell. He rode with his head down, and to the questions of the Regulators only shook his head. He came within a yard of us as he rode toward the rear. I called to him.

"He won't negotiate," said the doctor calmly. "You had all best go home. I look for him to open fire in a few minutes."

"Take care of Carnes," I called. He nodded and rode on.

"What's happened to Thompson and Mateer?" asked a man near me. The question passed down the line, a second later from the rear of the militia, came a single pistol shot. While we wondered, a man came running up from the center.

"Fire, fire," he cried. "Tryon's pistoled Thompson."

There was an uproar at that. Two or three muskets went off with a crash. Men cursed Tryon and his sheriffs. Threats were free, but even yet men hung back from action. Meanwhile the movement of the better armed men to our right continued. They were massing in a bit of timber opposite Fanning's flank. It struck me that it would have been well for the governor if he had kept Fanning off the field.

AN OLD man with a short red beard who stood to one side and took no part in the confusion nodded to me.

"Wantin' to fight, son?" he asked.

I said no, although I added that I did not like the killing of Thompson. It might have been a false report, I admitted. Rumors like that ran up and down the line constantly.

"Tryon gave us an hour to clear out," commented the old man. "You'll see him send out a white flag shortly to tell us that time's up. Then he'll start to shooting."

I was silent.

"If you don't want to be shot at, clear out," the old man went on. "Same as I'm going to do. I did enough fighting when I was young. Served in the army for years. I thought maybe we could settle this without a fight, but guess not. So I'm going home—" he looked about with a chuckle— "and plenty are going with me."

Indeed there was a steady dribble of men from the line back through the woods. The unarmed men who had come in hope of successful negotiations, the riff-raff who came to riot and to drink, the wind-bags who fought best around the campfire—these were all drifting to the rear.

"Coming?" asked the old fellow.

"Not just yet," I answered. He looked at me, smiled a little to himself and went on.

A man to my right was leveling his piece across a low branch. I followed his gaze and saw a soldier with a white flag coming out from Tryon's lines.

"Don't shoot," I cried. "It's a white flag."

"What of it?" he growled. "If Tryon shot Thompson, we can pepper his white flags."

His gun spoke. Down the line a crackling fire responded. The man with the flag retired at the double. Apparently he was unhurt.

Krafft's voice was at my ear.

"Husband's gone," he commented. "When the firing started, he got to his horse and took out."

I said his religion was against fighting, but without much heart in the excuse. After all he had helped to bring the men here, and he should have known that affairs had reached a pitch where a mass meeting would not do the business.

AT THE same time I was miserable about myself. Should I stay, or should I run with Husband and the rest? I hated the brutality of Regulators like those I had found whipping the prisoners the night before; I still disliked the mode of life at the frontier. The thought of the peaceful existence at Philadelphia, its luxuries, its reading, its sports, came to me often in occasional tides of homesickness. Yet to desert the Regulators was in reality to strike a blow for Tryon. Fanning and their kind—birds of prey that fattened on the poor of the back country. I had not the excuse of the gentlemen from the seaboard who filled Tryon's ranks.

I knew conditions in the west and I knew the reality of the Regulators' wrongs. Yet if I sided with the Regulators, I put myself finally on the side of outlaws, separated myself for years and perhaps forever from the life I loved, and condemned myself to a life on the farthest frontier where the King's justice did not hold. Hard living would be my portion and rough men my associates. Could this be borne?

I took an irresolute step toward the rear. In that instant there came, in a sudden moment of silence, a big voice down the wind from the ranks of the militia.

"Fire, d—— you, fire—on them or on me."

I could see single puffs of smoke appear along the line of the militia in answer to Tryon's appeal. Then one platoon was engulfed behind a cloud of powder smoke. I heard a noise as of hail in the leaves overhead and with a sort of astonishment realized that these were bullets. Other platoons took up the volley fire. The whole front was a mass of smoke. Then from the center came a heavier roar and dirt began to spray up some yards in front of our line.

In one of those curious moments of silence that somehow come over in the midst of tumult, I heard someone in the ranks of the militia say:

"I told the gunner he aimed too low. Higher, man, higher."

There was some firing from our side, but it was irregular. The bulk of it came from our right flank where I stood. In the center the replying fire was dropping off. I could see a few men stretched out on the grass and shooting into the murk ahead. Behind them a herding mass fought to the rear. It seemed as if two-thirds of the Regulators were leaving the field.

Another roar came from the field pieces. Branches of trees began to shatter on the heads of the fleeing crowd. They began to go faster, and men on the flanks ran from side to side, like frightened rabbits seeking cover.

ONE came past me, his face red, eyes staring, mouth open and arms flung wide. Acting on a sudden impulse, I tripped him and prodded him with my rifle barrel as he lay on the ground.

"Back into line, you cur," I cried. "Fight, confound you."

He paid no more attention than if he had fallen over a root, but scrambled to his feet and ran on. I felt my heart choking me. Anger and shame filled me. The governor had said he would make us run and that was what was happening. Were men like Fanning to stay in office because pacifists and cowards ran?

I dropped behind a tree and sighted along at the head of one group of militiamen I could glimpse through the drifting smoke. I pulled the trigger, but as flame leaped from the muzzle, the smoke closed in again, so that I could not see what execution I had done.

"Aim a little high," cautioned a calm voice to my right. "It's a little farther than it looks."

It was Krafft. A second later, he got to his feet and stared eagerly through the smoke. Then his cry brought a dozen men running.

"They're breaking. Fanning is running. Come on. Chase them."

I found myself stumbling forward through the smoke, coughing and blinded. Then as if I had stepped between curtains, I came into the clear air. The wind was blowing sharply from the east, so that the powder smoke was being carried away from in front of Tryon's line. I could see clearly, and for a moment stared in disbelief.

Where was that line? To my front, where the left flank of the militia had been, there were only a few men down on the ground, and clutter of equipment. Farther back, out of the old field, and among the trees, figures showed and an occasional puff of smoke showed action was still being kept up.

To the center, a few men were still working the guns. Even as I watched, however, buckskin-clad figures came out of the smoke on our side, crouched and fired. The defenders of the guns ran, save the two who lay still. Our men were running toward the guns. A whole line of riflemen came gliding through the smoky wraiths, stopping every few yards to fire and reload. I went forward with them.

At the moment I felt nothing but a tremendous exhilaration. We were fighting and winning. The militia were in retreat and their guns were captured. In spite of Krafft's predictions, in spite of Carnes' prophecies, in spite of Husband's defection and the desertion of over half the army, the Regulators held the field.

"Powder—" asked a grimy-faced man next to me. "Mine's all gone."

Mine was low, too. I had not realized how often I had been firing. The rifle barrel was hot. But I poured him out enough for a couple of charges.

Another came runing over to me with the same request. Him I refused, and I saw him running back over the field, turning over dead bodies, and hunting among the litter that wounded men had cast off.

The wind strengthened. Across the open space of the old field, it caught up the lessened volume of powder smoke and swept the field clear for a moment. By this time I was among the trees on the farther side. I looked back.

For a moment I could not believe my eyes. Only a mere handful of Regulators were in sight. Men with rifles were slowly falling back across the field. From their air of sullen regret, I guessed that only lack of ammunition was taking them from the scene of action.

TO MY left, a dozen Regulators were swarming uncertainly about the guns. They were trying to turn the muzzles toward the militia, but handled them awkwardly. I could see men gesticulating as if they were arguing as to how to load the pieces.

From ahead a bugle sounded. Through the woods ahead I could see the solid mass of hundreds of men. The militia were coming back. The wind that dispersed the cloud of smoke had revealed to them too clearly our weakness.

I fired once and then took to my heels. Across the open space, a score of other men ran with me. The group by the guns held out longer, but by the time we had rallied at the wood's edge and turned again, they were following us and leaving the guns to the militia men who once more swarmed among them.

In a few minutes, the field pieces were roaring again and balls were plunging through the woods to my left. To either flank, the lines of the militia were reforming. Again the platoon volleys began to ripple along the front. They began a slow advance.

34 per cent linseed meal	51.00

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .50½	$ .49½	$ .49¼	$ .51½
Eggs, fresh gathered extra firsts (N. Y.)	.53½	2.52½	.50	.62
Potatoes, 120-pound sack (Philadelphia)	2.30	2.25	2.25	2.50
Steers, good to choice (Lancaster)	13.87½	13.37½	12.75	9.00
Hay, Number 2 timothy, baled (Phila.)	16.50	16.50	16.50	20.50
Wheat, No. 2 red winter (Philadelphia)	1.37	1.38½	1.35½	1.42½
Oats, Number 2 white (Philadelphia)	.59⅝	.59⅝	.59¼	.55¾

Prices Are Generally Unsettled

Review of the Week Ending November 19

POTATOES—The potato markets were dull and weaker with liberal supplies and a limited demand. Prices in general declined from 5c to 10c per hundred pounds during the week. Shipping point markets were dull and several days there were too few sales to establish quotations. Buyers were purchasing for immediate needs only and lacked confidence in the situation.

BUTTER—The butter markets improved during the week and the market was generally firm. Supplies of fancy grades were comparatively light and prices advanced one-half cent. Many buyers were preparing to meet the holiday demand and this stimulated trading. Storage holdings are considerably heavier than at this time last year and the future trend of the market is uncertain.

EGGS—The New York egg market was generally steady during the week. Fancy brown eggs were rather scarce and prices were higher for the best grades. Fancy white eggs from the Pacific Coast were in rather liberal supply and somewhat lower in price. The decline of these western white eggs affected the market for nearby stock and some dealers were asking lower prices.

POULTRY—The warm weather during the early part of the week was unfavorable and the live poultry market was irregular and weak. At the close the colder weather influenced the market and conditions improved. Fowls met a fair demand while chickens sold readily with the medium and small sizes wanted. Pullets were firm and broilers were scarce and in demand. Receipts of dressed poultry were heavy and at the close of the week the market was in good condition, although the receipts were irregular in quality.

LIVESTOCK—The Chicago hog market was unsettled and showed a weaker tendency. Beef steers, however, were stronger and prices advanced. Vealers were lower in price while heavy calves were about steady. Stockers and feeders were weak and lower. Fat lambs were slightly stronger but feeding lambs were weak.

HAY—The hay markets were slightly weaker with liberal receipts. Cooler weather stimulated the demand but the offerings were more than ample for trade needs. Timothy was dull in the eastern markets and top prices were somewhat lower than last week. The average prices of the best grades of timothy are from $4 to $5 per ton below those prevailing last year at the same time.

GRAIN—Wheat prices held steady during the week. Foreign markets were stronger and there was a fair demand for milling wheat. Corn futures advanced sharply and cash prices were higher at some markets. Receipts were moderate and the demand was more active. Oats were firm with a good demand while rye prices advanced sharply.

APPLES—During the past week receipts of Pennsylvania and New Jersey apples were moderate in New York and Philadelphia. Trading was generally fair and prices held steady. Considerable quantities of drop apples were offered in Philadelphia. The best Romes and Staymans sold mostly at $2 to $2.25 per bushel while fancy Delicious brought $2.50 to $2.75. Fancy Pennsylvania Smokehouse topped the market bringing as high as $3.00 per bushel.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

AROUND Thanksgiving and Christmas more farmers ship poultry to market than at any other season of the year. Many of these farmers do not ship at any other time and are entirely unfamiliar with market practices. There are commission merchants that make it a practice to send out letters to growers promising high prices for turkeys and other poultry, and in a great many cases their prices are higher than market conditions warrant. They state that "we have exceptional outlets that pay a premium for fancy stock." Often they ask for a trial shipment and when it arrives they will return around five cents a pound over the regular market price. The grower is pleased and sends a larger shipment but something is usually wrong with it and the check is usually unsatisfactory. Short weight, poor condition or a portion of the shipment lost are a few of the alibis for the poor returns.

I know one "shady" poultry dealer that promises top quotations. He writes in this way, "We have investigated conditions carefully and find that most states have fewer turkeys than last year. Storage holdings are lighter and the market should be very good. Of course, the market will be affected by weather conditions, receipts and quality but we believe that the following prices will prevail. If the market should be higher than the following prices your interests will be taken care of."

This was followed with a list of high prices. The fact that this dealer used the expression "we believe" made the prices merely a matter of opinion and not a basis for settlement. There are many variations of this letter but there is usually a catch in it.

I do not want to give the impression that all poultry dealers are crooked or that any letter soliciting trade is an indication that the man that sent it is a gyp. Reliable houses must solicit trade but they do not promise the impossible and their letters are more conservative. The postal authorities have put many of these gyp dealers out of business for fraudulent use of the mails but it is easy to see that it is hard to get evidence that will convict them. While their letters are misleading as the one that I have quoted, still they are truthful.

Packing Method May Cause Loss

The fact that so many of the growers that ship at this season of the year are not familiar with shipping practices results in considerable loss. Sometimes poultry is placed in makeshift crates that break and injure the birds. The method of dressing poultry makes a difference in the sales price. Often poultry has been packed in barrels before the animal heat has been completely driven out and the birds heat in transit and are unfit for consumption when they arrive on the market. For this reason there is dissatisfaction since the grower receives poor returns and does not realize that the dealer has a legitimate claim.

It is not always the dealer in a distant market that takes the growers' profits. The country buyer that does not pay cash thrives in some sections and he is hard to catch for he keeps on the move. The farmer should investigate before he ships to a dealer to make sure of his reliability. The honest firm does not make extravagant claims and it has usually been established at one location for a number of years. Your bank should be able to give you the financial rating of practically any firm. If you follow the market reports as published in the farm and daily papers you can get a fair idea of what your poultry should bring. A neighbor can often recommend a reliable dealer. Your county agent and the State Department of Agriculture can also furnish the names of responsible commission men. It is well worth the effort to locate a good dealer for it is disappointing to be cheated out of your profits.

Working for Intelligent Feeding

(Continued from page 3)

Spent bone black of high grade may be accepted at the discretion of the approving committee.

12. The College Feed Conference Board recommends that the mineral content of the 32 per cent feed be 1 per cent steam bone meal and 2 per cent ground limestone. The tags on 32 per cent feeds shall carry the recommendation that cattle be supplied with salt.

Composed of Five Groups

The board is divided into five groups, which represent geographical districts with the same feeding problems. Each group has a chairman and these chairmen form the executive committee of the board. The membership by districts of the eastern states is as follows:

District I.—New Hampshire, J. M. Fuller, Durham; Vermont, E. H. Loveland, College of Agriculture, Burlington; Massachusetts, C. J. Fawcett, Massachusetts Agricultural College, Amherst; Connecticut, A. R. Merrill, Storrs, chairman; Rhode Island, J. E. Ladd, R. I. College of Agriculture, Kingston.

District II.—New York, E. S. Savage, Ithaca, chairman; Pennsylvania, A. A. Borland, State College; New Jersey, J. W. Bartlett, New Brunswick.

District III.—Delaware, T. A. Baker, Newark; Maryland, Devoe Meade, College Park; Virginia, C. W. Holdaway, Blacksburg, chairman; West Virginia, H. O. Henderson, Morgantown; North Carolina, R. H. Ruffner, State College Station, Raleigh.

A manufacturer who desires to have a formula approved sends that formula either to the chairman of a district or to the chairman of the executive committee, A. R. Merrill, of Connecticut. If the feed mixed according to that formula is to be sold only in one district then the formula is considered only by the men in that district. If the feed is to be sold nationally then the formula is passed upon by the executive committee.

In either case the comittee concerned studies the formula and approves it or sends it back to the manufacturer with suggested changes. Finally when it is approved the manufacturer is allowed to say that the formula of that particular brand of feed has the approval of the College Feed Conference Board.

Must Sign Agreement

When using the approved formulas of the College Feed Conference Board the manufacturer is required to sign and abide by the terms of this agreement:

We, the ..... Company in availing ourselves of the service of the College Feed Conference Board agree to abide by the following general rules, and to file a written agreement to that effect with each of the colleges in the member states of the College Feed Conference Board in which we offer our feeds for sale.

1. That where the name of the College Feed Conference Board is used in print, as for example on the feed tag, in circulars, or in advertising of any kind whatsoever, the following statement shall appear:

"Approved by the College Feed Conference Board for the following districts and member states: District 1, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island; District 2, New York, Pennsylvania, New Jersey; District 3, Delaware, Maryland, Virginia, West Virginia, North Carolina; District 4, Ohio, Wisconsin; District 5, Nebraska, Missouri, Kansas, Oklahoma.

The College Feed Conference Board approves formulas for feed manufacturers, but accepts no responsibility in supervising the mixing or sale of such feeds, nor does it guarantee the composition of feeds so manufactured."

Does Not Claim Superiority

2. It is understood that in recommending formulas for home mixing or for feed manufacturers, that no claim is made that such formulas are superior to those of other high grade home mixed or ready mixed feeds. The College Feed Conference Board intends each such mixture to be fed with special classes of groups of roughages, and in every case recommends that the farmer base his selection of a ration on the nature and variety of the ingredients, the content and cost of feed, nutrients, and the results obtained.

3. That no attempt will be made on the part of cooperating manufacturers to advertise or claim a personal endorsement by any member college or individual connected with the College Feed Conference Board.

CHRISTMAS IS NEAR! Our new Catalog has saddles, chaps, boots, ropes, spurs and 100 things for boys, girls and grown-ups. It is sent free. Chas. P. Shipley Saddlery and More Co., 1706 Genesee, Kansas City, Mo.

101,238 Dairymen

and Poultrymen Have Helped us to Make BB (Bull Brand) Feeds Fit Their Needs Better

BB (Bull Brand) Feeds were developed from formulas which have been *properly balanced* and compounded by recognized Feed Authorities. These formulas conformed to the standards established by Agricultural Colleges and Departments of Agriculture. They were tested, checked, and rechecked in actual feeding trials at the Maritime Research Farms and many other thoroughbred farms.

All test records demonstrated that Bull Brand Feeds gave production and health results which would satisfy the most exacting practical feeder. We could have said to ourselves, "BB (Bull Brand) Feeds fit the Feeder's Needs as Well as Their Needs Can be Met" . . . and stopped there.

Made To Meet The Needs of Thousands

But we wanted to make BB (Bull Brand) Feeds better fit the Feeders' needs in every way. So we sent missionaries out to study Feeders' needs. Our missionaries have interviewed 101,238 Dairymen and Poultrymen during the past 7 years. We analyzed the suggestions they received from Feeders. Those that seemed practical were perfected . . . tested . . . and if found good . . . were adopted. This accounts for our making BB(Bull Brand) Feeds of different protein contents to meet various local situations.

That is one of the reasons why tens of thousands of Dairymen and Poultrymen . . . in the New England, Middle Atlantic, and South Atlantic States . . . are getting maximum results from their cows and poultry with BB (Bull Brand) Feeds . . . and why hundreds of practical feeders are being won to BB (Bull Brand) Feeds each day.

Try BB Feeds Under Our New Money-Back Guarantee

Try BB (Bull Brand) Sweetened or Dry Dairy Ration and BB(Bull Brand) Poultry Feeds under our money-back guarantee. Get 300 pounds of our dairy ration or a 30-day supply of our poultry feeds from your local BB (Bull Brand) Dealer. Feed it according to the directions that are in each sack. Check the production. Compare the results. Then if BB (Bull Brand) Feeds have not produced greater results per dollar of feed cost . . . bring the empty sacks and the unused feed back to our dealer and he will refund every cent of the money that you paid to him.

DAIRY

A. A. BORLAND, Editor
Head of the Department of Dairy Husbandry
Pennsylvania State College

Centre County C. T. A. Reports

THE Centre County C. T. A. finished its fourth year August 1, 1927, with 18 whole-year members, in addition to four members who were in the association only part of the year. There were 285 cows in the association during all or part of the year.

The result for the association for the four years is as follows:

Year	Lbs. milk	Lbs. butterfat
1924	6257	243.7
1925	7280	265.3
1926	7903	289.0
1927	8050	293.7
Total average number of cows in the association		202.67
Avge. per cow: Lbs. of milk	8050	
Pounds butterfat		293.7
Percentage of butterfat		3.6

Following is a grouping of all cows producing over 300 pounds of butterfat: Group 1, above 500 lbs. butterfat, 1 cow; group 2, between 400 and 500 lbs., 20; group 3, between 300 and 400 lbs., 57. Total number of cows producing over 300 lbs. of butterfat, 78.

R. C. Blaney, county agent; Harold Brungard, tester in charge; figures compiled by I. O. Sidelmann.

Eight herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows	Breed	Pounds milk	Pounds butterfat
Ward C. Krape, Bellefonte	11.00	R. H.	11,838	410.3
A. C. Hartle & Bro., Bellefonte	9.42	R. H.	11,439	384.6
N. I. Wilson, Warriors Mark	16.00	R. & G. S.	7934	344.4
Allen Burrell, Millheim	8.17	R. H.	10,235	339.6
Peck Bros., Nittany	8.92	R. H.	9736	332.4
Peters Bros., Port Matilda	7.50	R. & S. H.	8790	328.1
Boone Bros., Bellefonte	14.25	R. & S. H.	9176	314.9
J. Victor Brungart, Smullton	9.92	R. & G. J.	6362	309.7

From the Week's News

ONE-HUNDRED and seventeen representative commercial and agricultural college radio stations are now broadcasting radio programs prepared by the Radio Service of the United States Department of Agriculture.

• • •

NEW JERSEY has 2650 acres of vegetable farm land which is being irrigated.

• • •

TO DATE a total of 1,798,080 imported parasites of the corn borer representing twelve different species have been liberated in the United States.

• • •

THE INTERNATIONAL Livestock Exposition, which opens at Chicago, November 26, will this year be made available to the country's radio audience through a linking up of leading broadcasting stations in the Mississippi Valley and eastward.

• • •

CENTRE, Washington and Susquehanna junior farmers are feeding 69 lambs to show at the State Farm Products Show at Harrisburg in January.

• • •

PENN STATE will be represented at the International Livestock Exposition at Chicago by 56 head of prize stock. Nine head of fat cattle, 25 head of swine and 22 head of sheep will be exhibited by the college.

• • •

APPROXIMATELY three hundred thousand black walnut trees are cut each year. Walnut trees for decades have been planted faster than they have been cut. It is estimated that over a million walnut trees are planted each year, some by man, but the majority through natural causes—principally the activities of squirrels in burying nuts.

• • •

SEVERAL HUNDRED more animals will be on display at the International Livestock Show at Chicago this year than ever before, the largest increases being in the swine and draft horse departments and in the junior feeding contest.

• • •

PENNSYLVANIA and at least 25 other states are engaged at the present time in accredited hatchery work which is an effort to produce more uniform and vigorous baby chicks.

• • •

CATTLE IN Pennsylvania which have been tested for tuberculosis up to November 1 number 714,331, 56 per cent of all in the state.

Record Herd Names

FOUR Pennsylvania breeders of purebred Holstein-Friesian cattle have recently reserved prefix names for their exclusive use and have registered these names with The Holstein-Friesian Association of America.

John S. W. Wehr, of Mifflinburg, will use "Rosechen" as the trade name for his herd. "Lochabar" is the name selected by Watson L. Barclay, of Williamsport; "Grassy Lane" by Henry Rockey, of Bellefonte; "Indian Creek," Solon E. Adam, of Macungie.

The purpose of prefix names used by breeders of purebred Holstein-Friesian cattle is to facilitate the naming and to identify the various herds. Nearly 7000 breeders in the United States now use these registered names regularly.

Do You Know—

THAT a dog is personal property under the Dog Law and its value can be recovered if illegally killed?

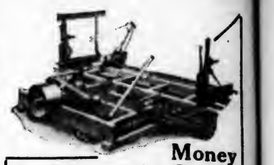
THAT without the Dog Law, there would be no check upon the careless and irresponsible dog owner, nor would he be liable for any damage caused by his dog?

THAT thousands of sheep and thousands of fowls are killed and injured annually in Pennsylvania by the uncontrolled dog?

THAT the present Dog Law provides the only means through which a person can be reimbursed for damages caused by dogs?

THAT thousands of dollars are paid annually to owners of livestock and poultry in connection with damages caused by dogs?

THAT without the Dog Law the number of stray, unowned, uncontrolled dogs would rapidly increase, with a subsequent increase in the loss to private property; a decrease in the wild life of the state and the danger of an increase in the spread of rabies?



Money In Accurately Sawed Lumber—

New line designed for Tractor or Light Steam Power. For sawing lumber, ties, etc. Very rapid and accurate. Larger Mills for heavy logs. Head Block or Log Beam Carriage. Write today for Bulletin 626 describing these remarkable and money making sawmills. We also build Engines from 10 up to 80 H. P. and six types of Boilers—a type for every purpose.

GET A Leola Self-Feeder on Trial

"Healthy, Heavy Hogs"

WE WILL ship you a feeder at no cost to you, freight prepaid. Give it a thirty-day trial and if not entirely satisfied, we will pay the freight. We do not ask you to pay one cent until you have tried a LEOLA Hog Feeder.

WHAT STATE COLLEGE FOUND

Two lots of fifteen hogs each were fed for thirty days on ration—Tankage, buckwheat, middlings and oatshake, self-fed to one group and hand-fed to the other. Here was the result:

	Self-Fed	Hand-Fed
Gain per day	1.3 lbs	.93 lbs.
Cost per cwt. gain	$5.24	$7.52
Profit above feed cost	$7.41	$3.18

This test shows what a Self-Feeder will do for you.

Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical compendiums a farmer-stockman can obtain.

COWS NOT DOING WELL.—I have two cows, both good Jerseys, and one of them is due to freshen the last of February. This cow is falling off in milk in the right front teat, in fact it is nearly dry. What is the cause? The other cow, due to freshen in May, seems to be stiffened up in the back and has scabs on rump. Both cows have been T. B. tested. They are on pasture and are fed a 24 per cent dairy feed morning and evening. What would you advise?—E. S. Murrysville, Pa. It is possible that the quarter has been injured and interferes with normal secretion. Try bathing with warm water and massaging the part twice daily. Apply zinc oxide ointment to the sores on the second cow. Allow all of your stock free access to a mixture of four parts steamed bone meal and one part salt.

The Sun's Vital, Health-Producing Ultra-Violet Rays Pass Through

FLEX-O-GLASS

PAT. PEND.-T. M. REG.

Weatherproof

[⅛ Cost of Glass AND BETTER]

The Greatest Scientific Discovery Ever Offered Poultrymen and Farmers

The large chick was raised under FLEX-O-GLASS. The small chick was raised under glass. Both chicks from the same hatch and were fed the same.

When Flex-O-Glass was first introduced, leading authorities on poultry husbandry and plant culture wondered whether or not the strong claims made for this amazing material were true. They tested Flex-O-Glass thoroughly—they found it fully as wonderful as claimed, and they recommended it to you. Read what their scientific tests revealed.

FLEX-O-GLASS Is Recommended by World's Greatest Authorities

The American Medical Ass'n Found Flex-O-Glass Wonderful

The American Medical Association tested Flex-O-Glass for 45 days, found it was not affected by months of exposure to wind, snow, sleet and all kinds of weather, and advised 2,500 doctors to recommend it for sun room and poultry houses. They put 11 chicks under glass and 16 under Flex-O-Glass. After six weeks half those under glass died. All but three under Flex-O-Glass were alive and each weighed one-third more than those under glass. This means you can raise twice as many chicks with a third more weight per chick at no more cost. You are safe in accepting the recommendation of the American Medical Association. Order genuine Flex-O-Glass for your whole farm. Now.

The British Illuminating Society Test Was Amazing

The British Illuminating Society divided a flock of hens for 10 weeks and fed both groups the same. The group that received Ultra-Violet rays laid 497 eggs. The other group laid only 124 eggs. This proves the Ultra-Violet rays alone, which Flex-O-Glass admits free the sun, brought 373 eggs. "God moves in a mysterious way, His wonders to perform."

Kansas State Experiment Station States:

"Some excellent results have been reported by practical poultrymen who have used glass substitutes, which will allow the passage of the health giving portion of sunshine to a considerably greater extent than glass." So writes THIS great authority in acknowledgment of the merits of Flex-O-Glass.

Famous Chemist Says—

Dr. Morse, for 45 years Consulting Chemist of Connecticut, says: "Congratulations are due you. Your statements I heartily corroborate. FLEX-O-GLASS makes hens lay, because the Ultra-Violet rays which penetrate it make hens healthful, chemically active, and increase oxygenating power of the blood."

Wonderful for Children

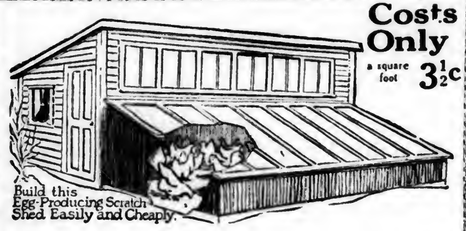
"Enclosed please find a picture of our children taking a sun bath. Showing one most important way we are using the FLEX-O-GLASS bewies using for our little chicks."—Mrs. O. T. THOMPSON, Poskin, Wisconsin.

You Can't Go Wrong on Flex-O-Glass

The tremendous success of Flex-O-Glass and the universal endorsement the farm and poultry world has accorded it, has led other manufacturers to claim the same lasting qualities for their products. Hence, to protect you, we want to remind you that Flex-O-Glass is made by an exclusive secret process on which there is U. S. Patent pending, and that this process results in a glass substitute of a far more durable nature. Flex-O-Glass is waterproof and unbreakable. It DOES withstand wind, rain, sleet and snow. It STAYS bright, fresh and new looking many seasons. Be sure to use only genuine Flex-O-Glass.

If you are not yet one of our hundreds of thousands of satisfied customers, realize the value of FLEX-O-GLASS now. Order today, before you lose our address. Prepare for zero weather now. Use our guarantee coupon from this page and get your money back if not satisfied in every way.

(Progressive Dealers Wanted)



Costs Only a square foot 3½c

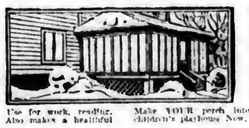
Build this Egg-Producing Scratch Shed Easily and Cheaply.

Make Your Hens Lay to the Limit ---All Winter Long!

Hens lay more in June because they exercise in the warm sunlight full of energizing Ultra-Violet rays. Build a FLEX-O-GLASS scratch shed quickly and give your hens these same benefits through the cold months. You'll gather eggs all winter while prices are highest. Don't feed hens for nothing. This scratch shed is easily and cheaply made on to your poultry house. No matter how cold outside, in it your hens will stay healthy, scratch and exercise vigorously in the soft sunlight full of egg-producing Ultra-Violet rays that cannot pass through glass. Thousands of enthusiastic users and leading poultrymen have found a FLEX-O-GLASS scratch shed a wonderful investment. 15 yards covers scratch shed 8x15 feet for 100 hens.

If you don't want to build a scratch shed for your hens, just take the glass out of your poultry house window sash and nail the Flex-O-Glass on. The house will keep warmer because Flex-O-Glass keeps the sun heat in; the Ultra-Violet rays that the Flex-O-Glass admits will keep the hens active, stimulate their egg glands—they'll stay healthy and lay all winter. Actually makes room much lighter than plain glass does. Take advantage of our Special Offer now.

PORCHES and SCREEN DOORS Easily Enclosed with FLEX-O-GLASS



Use for work, reading. Also makes a healthful children's playhouse.

Don't let your porch be a cold, bleak, useless room this winter. Turn a few yards of Flex-O-Glass over the screening or on 1x2 inch wood strips easily. Save fuel, avoid drafts and enjoy a warm, sunlight room flooded with an abundance of Ultra-Violet rays, rest or health room.

Make YOUR porch into a health room or children's playhouse Now.

Use on Brooder House

Put chicks in a Flex-O-Glass brooder house. The Ultra-Violet rays will keep them free from rickets. You'll get broilers for the market and laying pullets a third earlier. Use 15 yards of Flex-O-Glass for 200 chicks. Read in left column how American Medical Association proved the Value of Flex-O-Glass to anyone raising chicks.

Just Tack Over Broken Windows

Quicker, cheaper, better than glass for garage, barn, factory and school house windows. Poultry and animals do better behind Flex-O-Glass; men work better in rooms with Flex-O-Glass windows; children do better in school rooms windowed with Flex-O-Glass. Remember! No nail work needed. Just cut with shears and tack on. Stays bright and fresh many seasons.

Makes HOG HOUSES LIGHTER

Hog Houses must be built Flex-O-Glass windows make interior much lighter than glass because sunshine is diffused and sent to every inside corner. Little pigs grow much faster, ready for market earlier when given Ultra-Violet rays through Flex-O-Glass.

EASY TO INSTALL

You don't need any special nail work, no elaborate frames, no special tools to make a Flex-O-Glass scratch shed or to replace your glass poultry house windows with this wonderful Ultra-Violet ray admitting material. It's just as easy to put Flex-O-Glass over window on your farm. Just cut Flex-O-Glass to size and nail on. Wind can't tear it off. Rain, sleet and sleet do not affect it.

HOTBEDS

Plants grow faster under Flex-O-Glass and they don't die when transplanted. Flex-O-Glass doesn't chill like glass does and it holds heat longer. Sashes are lighter and easier to handle, too. Use Flex-O-Glass on your hotbed, cold frames and greenhouses.

There Is Only One FLEX-O-GLASS

All glass substitutes are not. Flex-O-Glass. The genuine is made on special cloth base having a scientifically calculated mesh that admits the most Ultra-Violet rays from the sunlight and at the same time is doubly strong and durable to resist wind, rain, ice and snow for many seasons. It keeps heat in and cold out. There is only one Flex-O-Glass and every yard is tested for your protection. Users find Flex-O-Glass stays fresh and new much longer. Get the genuine and at all dealers. Used all over the world.

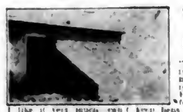
Unbreakable

Users All Over the World Prove What Scientists Discovered

Thousands of people have voluntarily taken the trouble to write us telling of the exceptional durability of Flex-O-Glass. They tell of instances where Flex-O-Glass has withstood heavy rains, hard sleet storms and driving rains, and that Flex-O-Glass stood up under abuse that ruined other materials. They also write enthusiastically of the amazing health-giving properties of Flex-O-Glass—how this wonder material keeps hens active and starting out eggs all winter—no matter how cold the weather. Genuine Flex-O-Glass is marked on every yard for your protection. Be sure to get the genuine.

415 per cent increased EGG PRODUCTION

I am keeping 141 FLEX-O-GLASS about 1st Jan. 1926, and there by hangs a tale Not until Jan. 1st. 1927 had I any accurate figures on production, so I waited until the end of the month to write you. Mr. FLEX-O-GLASS is still O.K. and his egg production shows an increase of 415 per cent over last year. (One hen laid 25 eggs in January.)"—A. A. SHINKLE, Macon, Ill.



Wouldn't Be Without Flex-O-Glass

"Enclosed find photo of one of my chicken tents using your FLEX-O-GLASS for scratch pen. I like it very much and keep hens outside. They prefer to be in even on stormy days. It is so easy to put on, and clean a large space in a short time. Makes a neat job. Wouldn't be without it. Makes my scratch pen so cozy."—CHAS. S. GRAU, Reading, Penna.

Flex-O-Glass Is Guaranteed Most Durable and Best

Order your supply from us today. Use it 15 days. If then not absolutely satisfied FLEX-O-GLASS is far better and more durable than any other material, or if it doesn't give more warmth, healthful light than glass or other materials which claim to do what FLEX-O-GLASS does, just send it back and we will cheerfully refund your money without question. This guarantee is secured by $1,000 deposited in the Pioneer Bank, Chicago.

Prices—All Postage Paid

Per yd. 36 in. wide; 1 yd. 30c; 5 yds. at 40c ($2.00); 10 yds. at 35c ($3.50); 25 yds. at 32c, ($8.00); 100 yds. or more at 30c per yard, $30.00.

SPECIAL TRIAL OFFER

We will send you 15 square yards of FLEX-O-GLASS in a roll 36 inches wide, 45 ft. long, postage paid to your door, for $5. This will cover a scratch shed 9 x 15 feet size for 100 hens—or use for enclosing porches, storm doors, hotbeds, cold frames, brooder, poultry and hog house windows, etc. Order your supply today. You take no risk. Satisfaction guaranteed or your money back. Valuable poultry information and instructions Free with every order. Tear out coupon and mail with check, money order or currency NOW. Your order will be filled the day received. Send $8.50 for 30 yards if you want larger trial roll.

Pledged to Render a Real Farm Service.
as advertised in PENNSYLVANIA FARMER
Gifts of Utility Hardware

They are Wonderful

CHRISTMAS GIFT STORES

You will find an amazing variety of fine Christmas Gifts at one of the "tag" stores near you. They are all useful gifts too, and of fine quality—the kind that you will be proud to give, and just as proud to receive.

You can get beautiful chests of silverware, or just a dozen knives and forks to fill in somebody's set. You will find family gifts there, such as a new kitchen range, parlor furnace or power washing machine. There are big assortments of fine kitchen utensils, electrical goods, carving sets and woodworking and mechanical tools of all kinds.

The youngsters will be delighted with the games, sleds, skates and skiis. There are also the always wanted sporting goods for the older boys and girls, such as good guns, tennis sets, baseball and football outfits, bicycles and such things. You will find radio sets and radio equipment there, too. No matter for whom you want to buy a present, you can find something in one of these "tag" stores that will please the person you give it to at a price you want to pay.

Find a "tag" store and go in and look around—you are always welcome.

The West As Viewed from a Car Window

We Traveled Through Rich Farm Land Into the Scenic Rockies

By W. H. TOMHAVE

FEW people realize the distance that must be traveled in taking a trip by rail or auto from the Corn Belt States to the Pacific Coast and back home. By traveling over the so-called northern route and returning over the southern route the traveler covers nearly 6000 miles or more than six times the distance between Chicago and New York. The time required to travel this distance is considerably greater than six times the time required to travel from Chicago to New York. This is due to the fact that there are more high mountains to cross and also because train schedules are arranged to allow for more loss of time for the trans-continental trains.

Western Agriculture at First Hand

I just returned from one of the western trips covering a period of nearly four weeks. The trip was planned so as to make it possible to attend two of the most important livestock expositions held annually in the United States and also to study first hand livestock and agricultural conditions of the western part of the United States.

By leaving Chicago on one of the morning trains over the Chicago, Burlington and Quincy, which now operates through trains to the Pacific Coast in connection with the Northern Pacific and also the Great Northern, it is possible to get a first hand view of the agriculture through the northern half of Illinois.

Altho the harvester-thresher combine is growing in popularity in the East, there will always be a place for the compact one-man binder outfit

Crop conditions in the Middle West are a decided improvement this year as compared with 1926. Except for the cold, wet spring the entire season has been more favorable even though the early prospects for a corn crop were anything but favorable. The late fall and hot weather during September matured the corn crop which is the backbone of the agriculture in Illinois. Hay was produced in abundance andeas a result the farmers have an unusual amount of feed.

The problem of most of the farmers through northern Illinois is where to get the livestock to consume the hay and corn crop. The region near Chicago is devoted very largely to dairying which provides the necessary outlet for the surplus hay and corn produced in that region.

Market Crops Through Livestock

After leaving the dairy belt, hogs, beef cattle and sheep are required to utilize the farm feed crops. At one time there were plenty of beef breeding herds and farm flocks through this section but many of these were sold during the period of livestock and agricultural depression. Hogs are still produced in considerable numbers. Most of these farmers contemplate purchasing feeder cattle and lambs to market their crops.

Most of the land in northern Illinois is slightly rolling but very productive if properly handled. As the traveler passes through the section on the western border of the state the land becomes rougher and there is more waste land than in the central part.

At Savanna, Ill., a distance of about 150 miles from Chicago, we got our first glimpse of the Mississippi River. During normal seasons it flows peacefully within its banks and gives no indication of its power of destruction of land, buildings and personal property (to page 29)

Statistics Have Made Insurance Safe

By STEWART ANDERSON

LIFE insurance is profitable to us. It protects our family, and it strengthens us in our business undertakings. Legal reserve life insurance companies are prompt in their payments, having devised a system by which death claims, and policy loans, and endowment payments are made with extraordinary speed.

In any well-managed life insurance head office, perhaps ninety per cent of the death claims that are received in the morning's mail are paid before business closes for the day. There are no costs attached to these payments—no fees of any kind; there is no waiting for action of a committee that meets only once or twice a month—nothing of that kind. More than ninety per cent of the checks go out the same day, and a full one hundred per cent would go out the same day were it not that sometimes there is a mistake or an omission in the papers which must be corrected or supplied before the money can be paid.

All Payments Made Promptly

The same is true of policy loans. And a policyholder usually receives his check for his matured endowment policy on the very day that the money is due.

Legal reserve life insurance companies are and must be sound and safe and there is no guesswork in the premium deposits you are required to make.

Suppose a thousand men came together and formed a little organization, for the purpose of making sure that each one of them should receive a thousand dollars fifty years from today, and their plan was for each of them to deposit one thousand dollars immediately, with a trustee. They would then be sure, of course, that each would receive his thousand dollars fifty years from today.

But it was found that some of them didn't have the thousand dollars, but could pay it in installments. And so the mathematicians figured out how much each man must pay each year in order to pay in his thousand dollars in installments. That, of course, is simple arithmetic.

Then someone suggested that this money would earn interest, and therefore that no one of them need pay in a full thousand dollars. And they agreed that the deposits would earn not less than three per cent. So they said, "Let us assume that the money will earn three per cent, and let the mathematicians figure out how much less each installment must be because of this interest."

So now we find that our thousand men have agreed to pay their thousand dollars each in installments, and that these installments take into account the interest which the fund will each year earn.

But that was not enough, because human experience showed that among the thousand some would probably die this year, some next year, some the year after, and so on. This being the case, and it having been agreed that if any of them would die his widow should receive his thousand dollars, some provision must be made to pay in the difference between what the man who died would have deposited, with his interest, and the full thousand dollars. And here comes in the great fundamental principle of safety in life insurance. Long years ago from statistics of cities and of great life insurance companies, the mathematicians, called "Actuaries," made up Tables of Mortality. These tables showed from actual experience how many men out of say a thousand who today are at age 25 will die next year, and the next, and the next, and so on all the way along.

And now we come back to our thousand men and their thousand-dollar payment. We have figured out their deposits for them, taking account of interest, and we must now take account of the fact that many of them will die within the next fifty years and that somehow there must be a contribution to make up the difference between what a dead man had paid and what his widow would receive.

It Is a Matter of Mathematics

Through these mortality tables the life insurance mathematicians have been able to figure out just how much each man's deposit must be increased to make sure that each living man will at the end of say fifty years receive his thousand dollars, and that the beneficiary of each dead man will receive, as soon as he dies, the thousand dollars. Those who live pay the difference. And it is entirely fair, because no one of them knows whether or not he will die today or tomorrow, his wife receiving the thousand dollars, or whether he will live five years, ten years, or the full fifty years.

From this you see that life insurance is a matter of mathematics applied to (to page 26)

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

He who makes the world brighter, more joyous, has not lived in vain.

Comments on the Week's News

THE East has its share of stupid, and possibly vicious, officials and politicians, but those in this class are pretty much alike. We have no outstanding freak such as Chicago has. For the possession of a man having the most unique methods in playing the fool we very generously extend the palm to the Windy City.

✦ ✦ ✦

So far, Congress has overlooked the regulation of cosmetics. But this will be called to its attention at the next session. It is just being realized that our women are in danger of having their natural complexions ruined by applying injurious substances to their faces in their efforts to improve upon the natural "peach bloom" which Nature supplied. We have long had good and effective laws for the insurance of purity in the things intended for the inside of the body, but so far there has been a criminal neglect of the outside applications.

✦ ✦ ✦

What has become of most of the questions farmers used to discuss in Granges, farmers' clubs, institutes, etc.? Have all been satisfactorily solved? Or have they been shelved by the crowding out of the opportunities for discussion? It seems to us that in the passing of the custom of holding rural community meetings, gotten up and conducted by the rural people themselves, a decided loss was sustained,—a loss which cannot be made up by the importation of outside speakers on academic farm topics, good as such meetings are in their place.

✦ ✦ ✦

The slight difference of eleven billion dollars in the calculations of the physical value of the railroads of the nation between the Interstate Commerce Commission and the railroad executives is raising something of a smoke. Since railroad rates are based upon the value of the property,—a fair return upon the value of the property being the acknowledged basis of computation,—the matter of eleven billion dollars is an important item. The attorney for the commission has estimated that if the claims of the railroads are accepted it will give grounds for a potential increase of eighteen per cent in rates.

✦ ✦ ✦

Most eastern farmers will be pleased to learn from the Department of Agriculture's report that the feed grain supplies this year will be slightly larger than in 1926. The corn crop of the nation is estimated as being 100,000,000 bushels above that of last year. Barley, grain sorghums and oats are also in greater supply. In addition to this, the hay crop was large, which taken in connection with the decreasing city demand, promises lower prices than last year.

✦ ✦ ✦

Those who are fortunate enough to have even a fair crop of apples this year will, no doubt, make out well. Fruit growers in general have been pulling a heavily laden sled on bare ground for several years, and those who make a profit this year are deserving of it. An orchardist told us the other day that his crop of 6000 bushels this year would make him twice as much profit as his 12,000-bushel crop did last year.

✦ ✦ ✦

The strike on the part of the hens this fall is causing some poultrymen to wonder whether or not the intensive systems of feeding and management may be too intensive. Moulting and wholesale epidemics are the main causes given for the slump in egg production. Some go so far as to say that over feeding caused by furnishing artificial lights is to blame However, there must be further investigation before radical changes are made in present systems.

✦ ✦ ✦

It is announced that President Coolidge is opposed to a revision of the tariff laws in the interest of the farmers. This is a preliminary reply to the report of the Business Men's Agricultural Commission which, among other things, recommends a revision in the interest of agriculture. The President does not believe that there is any chance of helping the farmer by lowering tariff duties.

Would Outlaw War

SENATOR CAPPER will introduce into Congress when it meets in December a joint resolution providing for the renunciation of war as an instrument of national policy, and calling for the settlement of international disputes by arbitration or conciliation. The indications are that this resolution will be in line with a number of projects intended to make the declaring of war by any nation more difficult and unpopular.

Surely, the people of this nation, and of all nations, will approve of all such efforts. They are tired of being drawn into war thru the blunderings of the few. Of course, there will be opposition to any such move as there always has been. Those whose business is war, and those who profit financially by war, will oppose and try to defeat, as they defeated the purpose of the late Geneva disarmament conference. But if the common people will stand by their convictions in this matter, nations may be brought to a method of settling differences after the manner required by individuals.

The Panic-Stricken Politicians

AS IS usual, and natural, the political leaders of the Republican party are scurrying hither and thither to find a candidate who can surely keep the party in power; the Democrats are likewise busy hunting for a man and a platform which will be more appealing to the people than the Republicans can offer. The whole line of political activities recently borders on the ridiculous. The plays are being made in such an open manner that the common people may readily see the tricks in the dealing. Big business and big politics are the only acknowledged issues at stake. No vital national policies are being considered. Is it possible that we have none, or is it because our would-be statemen do not recognize them? It looks as if our national policies were to be made after the tailor-shop plan,—cut to fit the man selected.

The Howl for Tax Reduction

THE fact that the present federal tax law is producing large amounts, most of it collected upon profits and big incomes, is not sufficient reason for drastic reduction. A great deal of emphasis is placed upon the "large surplus," estimated to be around $300,000,000. But is it a surplus in the true sense? The current expenses are not the only obligations of the government. This nation is in debt to the tune of several billions of dollars, why not collect the money while the collecting is good and reduce the indebtedness as fast as possible? The spokesmen for this class of taxpayers are also demanding a let-up in federal appropriations to states and a return to the principle of states' rights in public improvements. The interests of this nation have grown into a unit. All major interests are national in character, and it would be a decidedly backward step to try to recreate forty-eight little independent countries. Federal appropriations, and large ones, for roads, transportation, conservation, education, etc., are necessary to national welfare.

Editorial Sidelights

AFTER reading Mr. Anderson's article on insurance we thought it might be well to check up on ourselves. Pennsylvania Farmer believes in insurance or it wouldn't publish such articles. But some reader may ask, "Does Pennsylvania Farmer practice what it preaches?"

So we went to the man who handles the paper's business affairs and asked, "How many kinds of insurance does Pennsylvania Farmer carry?" This is what he said:

"Well, there is payroll insurance. If our messenger is held up and robbed on the way from the bank to the office on payday we don't have to stand the loss. Then there is public liability insurance. It protects us against people who might slip on our sidewalk and sue us for damages. Or if our sign should drop on somebody's head the insurance company would take care of any damage suits that might follow.

"You remember when our big electric motor burned out,—the one that runs the press? An insurance company paid the repair bill. We have a policy covering all our electrical equipment.

"Another policy protects all the hundreds of checks we pay out every year. If some crook should raise one of our checks the insurance would cover the loss. Or if a forger should get some of our funds unlawfully the insurance company would repay us.

"Then, of course, there is employe liability insurance, covering everyone who works for Pennsylvania Farmer. When someone is hurt in our plant the insurance takes care of hospital and doctor's bills, lost wages, etc.

"And the company automobile is covered to the limit. It is insured against fire and against theft. If it should accidentally hit someone the insurance company would take care of the damage claims and hospital bills. Or if it should smash some other car, or be smashed, our policy would protect us from financial loss.

"Fire insurance on our property? Certainly. We wouldn't be without it for a day. We've have some other policies but that is all I can think of now."

PROTECT MARKETS

Contest Appointment—Would Make Tax Cut Introduces Policy for Settling International Disputes.

Washington, D. C

PRESIDENT COOLIDGE has let it be known that he will oppose any attempt to solve the farm problem by lowering the tariff duties. He feels that it would be more beneficial to promote a movement designed to adjust production to meet the requirements of the home market, as the main market for American agricultural products is now and will be in future in the United States, and he would preserve the home market for the American farmers by a protective tariff that would equalize the difference in production costs at home and in competing countries.

Prepare to Contest Appointment

The farm bloc of the Senate is preparing to contest the confirmation of Eugene Meyer, who was appointed chairman of the Federal Farm Loan Board by President Coolidge several months ago. They say he is unfriendly to agriculture and the farmers do not want him. His administration of the War Finance Corportion is cited as an objection to his holding the office.

Barge Lines Successful

Operation of barge lines on the Mississippi River by the Inland Waterways Corporation has been so successful that the government is being asked by the Missouri River interests to provide funds for the establishment of a demonstration barge line on the Missouri as far up as Kansas City.

Increase Sale of Products

Sales of manufactured and agricultural products have been materially increased through the efforts of the Department of Commerce, according to Dr. Julius Klein, director of the Bureau of Foreign and Domestic Commerce. The actual orders obtained and specific losses avoided by the Department of Commerce have amounted to more than $500,000,000 during the last fiscal year.

Approve Tax Cut

A program calling for a tax cut of $235,000,000 in federal taxes has been approved by the House Ways and Means Committee. The reduction of the tax rate on corporation incomes from 13½ to 11¼ per cent was decided upon by the committee. The sales tax on automobiles was cut from 3 to 1½ per cent. The movement for the repeal of the federal inheritance tax was turned down

Want Farm Loan Act Amended

An effort will be made in Congress this winter, according to Charles W. Holman, secretary of the National Cooperative Milk Producers' Federation, to secure an amendment to the federal farm loan act, providing for extending the long-time amortized loan plan to cooperatives for the purchase or construction of warehouses, milk plants and other buildings necessary for the operation of the cooperatives.

Capper Announces Resolution

Senator Arthur Capper, of Kansas, announces that he will introduce a joint resolution in the Senate providing for the renunciation of war as an instrument of national policy and calling for settlement of international disputes by arbitration.

Admit More Aliens

During the past fiscal year there were 284,493 aliens admitted into this country in excess of departures, as compared with 268,351 for the preceding year. Practically one-half of the immigrants admitted during the past year came from countries in the Western Hemisphere, the quota restrictions not applying to these countries. Canada and Mexico furnished the greatest number of immigrants, 81,506 coming from Canada and 67,721 from Mexico. Europe sent 168,368, the largest contributors being Germany, 48,513; the Irish Free State 28,054; Great Britain, 23,669; the Scandinavian countries, 16,860, and Italy, 17,297.

Work Is Gratifying

The development of the farm labor work of the United States Employment Service according to Secretary of Labor Davis, is producing gratifying results. This division is charged with the responsibility of recruiting and distributing men for the seasonal farm labor. The value of the crops harvested by labor directed to it through this service aggregates several billions of dollars. This was accomplished at a per capita cost of a little less than 15 cents for each worker placed.—E. E. R.

WANT RURAL DOCTORS

Weed Control Is Topic—Plan Peach Yellows Campaign —Make Fewer Arrests— More Clean Streams.

Harrisburg, Pa.

EFFORTS of the Grange to interest young doctors in rural practice are finding sympathy at the State Capitol and it is the plan of officials connected not only with the Department of Agriculture, but of others, to discuss the problem with the older men of the professions so that practical steps can be taken when the classes graduate next summer. One of the chief difficulties of recent years has been that so many physicians become impressed with the advantages of city practice upon completion of their interne periods in hospitals and do not go back to home communities. However, with completion of hard roads and expansion of hospitals it is pointed out here that chances for doctors are still good in the country.

Plan Weed Drive

One of the big topics to be presented at the numerous meetings scheduled for the Farm Products Show Week in this city next January will be weed control. Much additional data has been obtained and will be made a feature in the programs.

Plan for 1928

State agents are working on a plan of campaign which it is hoped will bring peach yellows to the minimum point next year. This year's inspection covered an area where yellows means loss of dollars and next year there will be re-inspection and new territory will be covered. This latter will be area which has had some scouting and where yellows is rare. A summary of seven years' work is to be presented to Governor Fisher and all hands will prepare for the big drive next year.

Fewer Dog Arrests

According to a table issued by the dog licensing branch of the Department of Agriculture the enforcement of the dog law with a record total of licenses has been accomplished with over 2600 fewer arrests than last year. There was a total of 5670 and counties having over 300 were Fayette, Washington, Luzerne and Allegheny. One of the oddities is that Westmoreland with 21,417 dogs licensed had but 95 arrests. It is the third largest county in the list of dogs licensed.

Gain in Crops

While Pennsylvania's production of corn and wheat fell off noticeably this year potatoes went ahead of estimates with a total of over 25,000,000 and hay also showed a jump. Pennsylvania's oats gained and it still is away up in buckwheat production.

More Streams Clear

State Sanitary Water Board authorities are out with announcement of addition of over 1000 miles of streams in northern rural counties added to the waters declared free from pollution and to be kept so. This is the result of important follow-up work during the fall, spring inspection having been made.—T. C. A. K.

ASK HONEST PACK LAW

Hold Get-together—Fur Is Poor Quality—Granges Hold Conference—Exhibit Farm Products.

Trenton, N. J.

FRUIT and vegetable growers met in Farm Bureau headquarters in Trenton on November 22 to consider the feasibility of asking the legislature to enact an honest pack law for New Jersey products. This move was started at the Agricultural Legislative Conference called by the Farm Bureau and the State Grange early last month. The fruit growers have suffered heavy losses this past season by the packing of inferior and green fruit in packages that have been heavily topped to represent fancy fruit.

Represent New Jersey at Chicago

Dr. Jacob Lipman, Director of the New Jersey Experiment Station, and Dr. L. J. Baker, director of extension, New Brunswick, represented New Jersey at the recent session of the Association of Land Grant Colleges and Universities in Chicago. Dr. Lipman, as a member of the executive committee of the association, took an active part in the drafting of important resolutions that have a direct bearing on New Jersey agricultural conditions.

Short Course Enrollment Normal

Enrollment in the Short courses of Agriculture, New Brunswick, is about equal to that of 1926. There is a decided movement from the city to the country in the attendance at the courses, particularly those in vegetable growing and poultry husbandry.

Farmer-Banker Get-together

A farmer-banker conference and dinner of the leading farmers and bankers of Monmouth County was held at the Metropolitan Hotel, Asbury Park, on November 18th. This is a part of a long-time agricultural and banker cooperative movement that is under way in Monmouth County. County Agent Douglas has taken an active part in this program.

Weather Spoils Fall Fur Catch

Warm weather has interfered with the early fall trapping in southern New Jersey and low prices have resulted for pelts because the fur has not been of a seasonable quality. Indications point to a light catch of muskrats this year due to an open season late last spring and the muskrats were killed very close.—A. K.

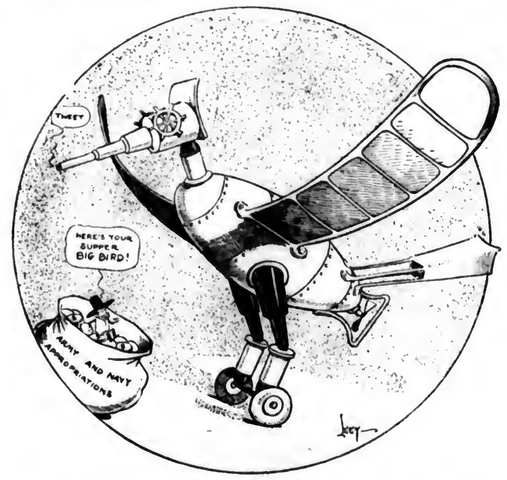
Grange Lecturers Confer

The annual conference of New Jersey Grange lecturers will be held in the Hotel Morton at Atlantic City on December 5, just preceding the annual conclave of the New Jersey State Grange. One of the features of the evening gathering at the lecturers' conference will be the presentation of the 1927 lecturers' prize. The New Jersey State Grange's newest project, that of life insurance, is making good progress, and the further use of Grange-owned facilities for insurance of members will have an important place at both the lecturers' conference and the annual meeting.

Cape May Holds Show

The annual Cape May County Corn and Potato Show will be held at Cape May Court House on December 17th. The exhibit will be staged jointly by the County Board of Agriculture, in conjunction with its annual meeting, and the vocational school system. The best exhibits will be sent to Trenton for Agricultural Week in mid-January. Those who win first awards in the corn and potato show will be entitled to a free trip to Trenton during that week.—W. H. B.

HOW THE DOVE OF PEACE LOOKS TO SOME OF US



GIVE CHILD TRAINING

Are Directing Religious Education in Rural Schools—Give Average Expense for Library Books.

Ithaca, N. Y.

RECOGNIZING the fact that many adult difficulties have their start in childhood the State College of Home Economics has, through the Home Bureau, been directing parental attention to the pre-school child by holding three-day child study institutes.

Religious Education Given

Following the holding of nearly a score of daily vacation bible schools in Tompkins County last summer this county has employed two full-time trained workers to direct religious education in the schools of the county throughout the year. Rural schools have had several classes with 100 per cent attendance in all but one instance.

Give Per Capita Expense for Books

Cayuga County is spending 21 cents per capita for books for its libraries; Chemung, which has the leading county library of the state, spends 27 cents for books; Tioga, 14 cents; Tompkins, 4 cents. The average per capita expenditure for libraries, taking all the counties of the state, is 38 cents.—M. G. F.

This is the *flavor* people "rave about"

"I heard about the Old Hickory method and tried it out on 700 pounds of pork. All our neighbors who tasted the hams and bacon raved about it. Will never use anything else for home curing." Mr. L. J. Wade, Leal, Colo.

Use Edwards Old Hickory Smoked Salt in your cure and you, too, will never use anything else. The hickory wood smoke goes directly into the fresh meat along with the salt, flavoring and preserving every tissue. It prevents spoilage in cure, improves keeping qualities through the long months of storage and produces a marvelous blended flavor that grows more delicious with age. No wonder "the neighbors rave about it." The smokehouse shrinkage is saved. These valuable fats and juices, together with the natural goodness of the meat, are blended with the savory aroma that nothing but Old Hickory can produce.

Edwards Old Hickory, the *original* and *genuine* smoked salt for curing, is highest purity meat salt smoked in the open air with real hickory wood smoke. Nothing added. It is sold only in ten-pound drums with the trade mark exactly as it appears here. Buy it from your dealer today.

IT HAS been my experience not to realize how bad or imperfect a thing or method was until after I had something better. I believe that is true with most people. We manage to get along, maybe for a long time, with that which is unhandy, laborious and expensive, but we adjust ourselves to conditions and struggle on with more or less grumbling, but with regular farmer patience. Then suddenly we find the bad has been replaced with the good, and only then do we realize how we were handicapped. But once the change for the better is made we would not go back to the old for anything.

✦ ✦ ✦

IT IS this trait in human nature that almost insures the maintenance of the many, many improvements that have come into our lives within the last generation. This experience also gives us hope and vision for still further achievements, altho we may not see just now what more can be added. I made another trip last week up into my old home neighborhood. I have not yet become accustomed to the improvements there, especially the modern cement roads. I told them the other day that if I were to move back there I would not do a thing for a week but ride forth and back over those roads,—the roads over which I traveled for years when they were nothing but rough dirt roads, dusty, muddy, rough and most tiresome.

✦ ✦ ✦

I WAS in a home the other day where the inmates, and their fathers before them, had carried the water from a spring ten rods away. Recently, they installed an automatic water system and the family is delighted with it. They do not see how they ever stood it to carry all the water necessary to a home.

Now, if we could (or would) make equal improvement in our personal lives,—our habits, thoughts, customs, etc.,—what a pleasant time we might have as we go through life!

BUT we seem to be making more progress in improving the things of life than we do in life itself. I met a man while I was away last week who has done remarkably well in getting the things which make life easier and more comfortable. But he is just as sour and pessimistic, just as full of fault-finding and cynicism, as he was before. He, himself, has not changed for the better one iota. He still sees thru a glass darkly. I do not know whether he has stomach dyspepsia or not, but he surely has mental dyspepsia. He will not be able to enjoy his added improvements until he changes the color of his spectacles. Here is a good place to hang a tale.

✦ ✦ ✦

ONCE upon a time my grandfather had some trouble with his eyes. They seemed to be irritated and the light hurt them. One fine, clear day in summer he decided he would hitch to his buggy and drive six miles to town and consult a friend who was a jeweler and an oculist. The friend made an eye-wash and gave him a pair of dark-colored glasses. Grandfather put the glasses on and they chatted pleasantly for perhaps an hour.

✦ ✦ ✦

FINALLY Grandfather decided it was time he should start home. He stepped out onto the street and was surprised and alarmed to see how changed the weather was. A severe storm was imminent. The sky was dark and threatening. Without doubt, a violent wind and rain storm was about to break. Grandfather hurriedly drove to a livery stable and put his rig in the dry, and went back to continue his visit. He then took off the glasses to apply some of the lotion. What was his surprise to see the sun still shining and the sky almost cloudless! His colored glasses had misrepresented the conditions.

I find a lot of people who need to take off their spectacles, or at least change the color of the glass.

The Cheerful Plowman
The Tramp and the Axe

THE axe has always been the bane of every tramp since days of Cain; the chopping block has been the dread of tramps since man first sought his bread! We've had our share of tramps this fall, tramps long and short, and big, and small! "I need a feed!" each says to me, "I'm faltering in wind and knee! My goodness, stranger, how it hurts to have one's ribs poke through his shirts! My shoulder blades are sharp as boards, my collar bones like knives or swords! My stomach is so blessed slack I feel it flap against my back! My backbone is a row of points, I'm just a sack of sharpened joints! Six pounds of beefsteak would be fine! Have mercy on this frame of mine!"

Ah, then with cruel and stern decree I get the axe beside the tree! "You see," I say, "this pile of ash; this axe is built to split and smash!" "Ah, no!" he gasps, "that heavy axe would make me perish in my tracks! Just let me eat six pounds of steak, just let me munch a pan of cake, just let me cast my eagle eye upon a portly cherry pie, just let me pile within my waist three April chickens fried to taste! These items all attended to then we shall see what we can do!"

"First prove yourself," I always say, "first show me that you mean to stay and finish up when you are fed; here, take this axe, you're far from dead!" No use! The average tramp, I find, considers me severe, unkind, and empty still he goes his way and cusses me for half a day! This tale is old, I know that well, as old as any tale I tell, but old or not it's true as steel and should be told at times, I feel! The tramp declines to prove himself before he tests the pantry shelf, the tramp declines to prove his steel before he gets his roof and meal; his story then, I'm sure, applies to many men of every size!—J. Edw. Tufft.

Friendly Talks
By Edgar L. Vincent

OVER in one corner of our farm we have a number of small springs, no one of which furnishes a great deal of water, but all of which are what we call "durable" springs. That is, they do not fail when the weather is dry. Needing more water than any one of these springs would supply, we thought out the plan of bringing the streams from them all to a central point, thus increasing the volume of water so that we might have enough for everyday use. This we did, piping the water from the several springs to a common reservoir. But there was one spring that seemed so small that we left it out.

"No use to bring that in," somebody said. "The water it would furnish would not amount to much."

But to make assurance doubly sure, we did lay a pipe to this weakest spring and it proved in time of drought to be just the one to keep the reservoir up to requirements. Then we were glad that we did not leave out the little spring.

No spring is so small that it cannot help to water the cattle.

Are You Critical, Too?

It seems to some folks that this is a pretty dry time for truth, justice and right living. Most of us can see plenty of things to find fault with in the administration of public affairs. There is no lack of opportunity to criticize the folks we know best for something they do or do not do that does not agree with our way of thinking; and we do it, too. Watch yourself today and see how many times you are tempted to say harsh and critical things about the men who have been elected to do the public business and the neighbors with whom you have dealings of one kind or another. If you are like the most of us, it will be very easy to catch yourself at this discouraging habit.

And are we apt to say, "Why don't these folks straighten up and do right? Can't they be honest and true and fair in their transaction of the peoples' business?" Or if it be some neighbor, we may be even more harsh. "It is a shame and a disgrace for Sam to act as he does! Seems as if he grows more foolish every day!"

But listen! This old world never will get righted up until you and I straighten up ourselves. But we are so apt to excuse ourselves and say, "What am I that I should set out to reform society?"

It is the story of the little spring told over again in more striking language. No man of us but has some influence one way or the other. It will, it must be for the right or for the wrong. Some way our acts day by day will count. It is so with Sam; it is so with me; it is so with you.

Remember the Weakest Spring!

And the thing that is most sorely needed at the present time is that the springs shall be brought together; that every man shall be a good man, casting his influence on the right side of every question that concerns the public welfare. We could not do without the smallest spring. No more can we make this a really good world without the help of the humblest citizen.

"But where can I help?"

We can all help right in our own homes. Not a man of us can say that he is as good a man as he might be and ought to be. And we can help in the neighborhood, by being good and kind and cheerful in the midst of all trying circumstances. And we surely can help when it comes to conducting the affairs of the town, county, state and nation. How? By using the rights that have been given us by a good and generous government. Finally, we can help by throwing every bit of influence we can on the side of good schools, good churches and good organizations generally.

Let's bring all the springs together and use them for good!

ATWATER KENT RADIO

Tremendous saving in the world's finest radio

EVEN before these new 1928 low prices were announced, Atwater Kent Radio was overwhelmingly preferred in rural homes.

NOW the always moderate prices of Atwater Kent ONE Dial Receivers and Radio Speakers are still lower. NOW the radio that most farm families prefer, as proved over and over again by their words, is within the reach of thousands and thousands of families who still thought the prices of really good radio were a little high.

Universal demand has enabled the largest radio factory to put the economies of big production into effect. At the same time our radio has been greatly improved in performance.

Much better radio—at much lower prices—with Christmas just ahead! Let the nearest Atwater Kent dealer show you.

GARDEN AND TRUCK

GILBERT S. WATTS, Editor
Logan Spring Farm

The Carrots and Parsnips Are Harvested

WE HAVE been digging and burying late carrots and parsnips. Formerly we ran a plow alongside the row leaving the carrots standing in the unplowed land close to the edge of the furrow. This year we changed the hitch on our single-blade potato digger so that it ran very deeply and found the job went much faster. Also the tops were snapped from the carrots as fast as they were pulled instead of stopping to cut them off as we once did. Each man put his carrots into the handled basket on his arm and in turn emptied into barrels placed at convenient intervals.

On the last day of May I drilled an acre and a half of the carrots we have just been digging using Danvers Half Long from two seed houses. Two weeks later the remainder of the same piece was drilled in exactly the same manner and with the seed remaining in the same bags as used before. This was done in order that the hand labor of thinning and weeding might not all come at the same time. At digging time the earlier planting yielded above 500 bushels per acre while the planting made only two weeks later fell under 300 bushels.

I could hardly believe that such a difference in yield could result from so small a delay in planting when soil, seed, fertilization and culture were otherwise the same. The stand was perfect in each case and I can reach no other conclusion than that those extra two weeks with long hours of June sunshine and warm temperatures were worth more in crop-making ability than a month in the fall. I will admit this soil was not as rich as some and that the difference might be less another year. However, I am quite sure that the latest planting dates as given in the tables of many seed catalogs and books are entirely too late for the heavier soils and shorter seasons in many of the inland and upland sections of the northern states. Perhaps those tables have been worked out somewhat on the basis of conditions existing in the warmer sandy soils and tempered climates of the nearby gardening sections around Baltimore, Philadelphia, New York and the Great Lakes cities.

Green Manure Will Build Land

Cover Crops Are Sown at End of Harvest

THANKS to much more favorable late summer and fall weather than in 1926 we now have an unusually large acreage of green manure crops for fall and spring plowing. When manure is so scarce and expensive it looks mighty good to have many green acres of sweet clover, oats, rye, timothy or almost anything else to provide organic matter.

Early in July the first green manure was sown. Timothy, red clover, alsike clover and a very little sweet clover in mixture were broadcasted before the last cultivation in two acres of early sweet corn, the last cultivation being given with a fine-tooth cultivator. The composition of that mixture gives away my partial intention to cut that patch for hay next June. However, favorable rains have brought on such an abundant and luxurious growth this fall that I am afraid I will be unable to resist the temptation to turn down this sod and plant some truck crop. The sweet corn was cut down with a mowing machine the day the last ear was picked, adding just that much more organic matter. Cut green as they were and lying for several months under the dense growth of timothy and clovers the corn stalks are now so far decomposed that I am sure no borer could survive. If the late summer had been droughty this plan would not have worked so well. Also, I believe I would have used sweet clover alone if I had been sure the crop would be plowed down.

Oats Proves Its Value

The next green manure to be started was oats following early cabbage and other crops coming off during July and the first half of August. As usual this old standby has produced a vast amount of top growth and had made so dense a root development that the furrow rolls over like a heavy old sod. The photograph taken a month ago shows the oats when two-thirds grown.

Experience proves that this system—a well-fertilized early truck crop every year followed by oats—WILL BUILD land.

Six years ago an acre plot at one side was so poor that it was left out of the main field when early sweet corn was planted and was drilled in oats to be cut for grain. The stuff scarcely reached the cutter bar. The plot was then limed and sown to sweet clover in late August. The clover made a fair growth and was plowed down in July of the next year. Then oats was sown and in turn it was plowed under in December. That all took two years and the plot was visibly improved. The last four years it has produced profitable crops of peas, spinach, cauliflower, beans, in each case followed by oats in the late fall. No manure has been used at any time and I am sure the land is so much better that good celery could be grown there next year if given reasonable fertilization.

I once met a grower who was enthusiastic over thickly-sown timothy as a green manure. I imagined fertile soil was required to make it a success and never tried timothy until this year when an acre of early cucumbers was broadcasted with a half bushel of seed about the time the cucumber crop began to fall. An irrigation was given to help cover

and germinate the seed. The resulting growth is certainly dense, roots and tops forming an almost solid mat. Whether or not this is better than the oats I can only guess. Perhaps sweet clover would have been even more desirable although I doubt this in the present case where the ground is to be plowed in early spring. In any event it is certain that the timothy has mopped up all soluble nitrates which might have leached away over winter and that there is a wealth of finely divided plant material to loosen up the soil and for next year's crops to feed upon.

Every gardener appreciates the value of that old reliable, rye, which can be sown later in the season or under more adverse conditions than almost any other crop and still make something worth while to plow down. No comment is required. Rye has its place.

One of the most interesting green manures on the place is sweet clover sown broadcast 20 pounds per acre in tomatoes before the last cultivation. Sweet clover being slow at the start no damage was done to the tomatoes. Although the field was repeatedly picked after the young clover plants were above ground they stood the tramping remarkably well. Practically all of the plants have reached a height of six inches and many have twice this amount of growth. This block of land is to be planted in late beans, late sweet corn, fall lettuce, etc., next year so that the sweet clover will have time to reach its optimum development before plowing down.—Gilbert S. Watts.

Worms Destroy Turnips

I had trouble this summer with wormy turnips. I sowed some seed the first week in May, the later part of June and again the first week in August. None were fit for market. Can anything be done to prevent this damage?—H. P. B.

In reply to your inquiry requesting information on the control of turnip worms, I have practically quit growing turnips on account of this pest.

The only treatment with which I am familiar is to apply a solution of corrosive sublimate, 1 ounce of powder dissolved in 10 gallons of water. This should be poured along the row within a few days after the plants break ground, repeating at 10-day intervals. Apply if possible when the soil is not too wet and in such amounts that the solution will soak down a couple of inches. I doubt if this can be done on a commercial scale without excessive cost.

The turnip worm or maggot hatches from an egg which a fly, somewhat similiar to a house fly, lays at the base of the plants. It is the same pest which attacks the roots of cabbage and radishes. Liming will not help control this maggot but is valuable in lessening the danger of serious attacks of club root, a soil-borne disease.—G. S. Watts.

Potato Club Shows Increased Yield

RESULTS of the Fulton County Potato Club sponsored by the Pomona Grange of Fulton County show an average yield of 239 bushels of potatoes per acre from disease-free seed and 187 bushels from home seed, an increase of 52 bushels.

Harold King, Waterfall, had the top yield, 325 bushels an acre, from disease-free stock and 268 bushels per acre from home seed. The round-up was held at the Harrisonville Grange Hall.

Opinions of Yesterday

AS THE quantity of land in the United States is much less that will make good butter than that which will grow sheep and wool, there is less competition in the production of the former than in the latter, and the farmer should always choose that branch of business in which there is likely to be the least competition, other things being equal.—Hon. A. B. Dickinson, of New York, delivered before the Tioga County Agricultral Society, Monday evening, May 1, 1854.

EVERY FARMER should take at least one good paper devoted to agriculture. The most intelligent farmer can find much to interest, and many things which instruct, and will enable him to improve his crops and give a much richer reward for his labors. As farmers, we must read and think for ourselves.—Hon. A. B. Dickinson, of New York, delivered before the Tioga County Agricultural Society, Monday evening, May 1, 1854.

A MODEL FARMER is one who cares a good deal more for the quality than he does for the quantity of his land.—from a speech made by R. E. Wright, before the Lehigh County Agricultural Society in 1856.

Rambles of a Pennsylvania Fruit Grower

XXVIII.—Hood River Apples—A Vanishing Industry

By S. W. FLETCHER

HOW far have the mighty fallen! There was a time when Hood River was a name to conjure with; when Hood River apples and Hood River methods of culture were held up as the ideal toward which the rest of the pomological world might strive, but hardly expect to attain. The last time I was here, twenty years ago, Hood River was at the very pinnacle of its fame. Hood River apples brought $3.50 a box, f. o. b. shipping point. Hood River cultural methods were pictured in the popular magazines in glowing terms.

All is changed. Thereby hangs a sorrowful tale, and a moral so plain that he who runs may read. The once famous apple orchards are passing out rapidly. Those that are left look sick. The whole valley has an unkempt, dejected, down-at-the-heel appearance. I say this with regret and sympathy, not with competitive exultation. I was shocked at the change wrought in twenty years, but I am equally certain that Hood River will come back; perhaps not in apples, possibly in pears or strawberries, but certainly in some phase of fruit growing. It has been dealt a staggering blow, but the fight is only just begun. No fruit district has a more intelligent and energetic body of growers. They will carry on.

Three factors have contributed to the downfall of Hood River apple growing aside from the prevailing low prices of recent years, which all

Spraying a Hood River apple orchard from the ground with stationary ou fit

districts have shared alike — too close planting, winter injury and perennial canker. The orchards were planted twenty-four to twenty-six feet apart. As the trees became older, they shaded each other, and the proportion of "C" grade, mainly poorly colored fruit, increased very rapidly.

The chief difficulty, however, is winter injury. In 1919 the temperature dropped to thirty degrees below zero, and to twenty-six degrees below zero last December when the trees were not yet fully dormant. The most destructive form of winter injury is the killing of the bark in the crotches and at the crown, much as tender varieties like the King are sometimes affected in Pennsylvania.

Orchards Are Dying Out

Whole orchards have gone out. I saw many painful gaps along valley roads that were lined with thrifty young orchards twenty years ago. The orchards that are left look ragged. Spitzenberg has suffered worse than Yellow Newtown. This variety and the Delicious are their most dependable sorts; even these, however, are not wholly reliable. Top-working them on a hardier stock, such as the Arkansas Black, has been recommended. It may be significant that the years of most severe winter injury have followed years of heaviest production. Recently the valley has been planting pears heavily, yet these have been winter injured also, especially the younger trees. The Hood River Experiment Station is seeking a hardy stock for the pear canker. It attacks the injured bark and spreads rapidly. So far as is now known there is no practical method of controlling it; even cutting out the diseased wood does not suffice. Spraying with Bordeaux may help slightly. Between winter as well as for the apple.

Following winter injury comes an insidious disease, the perennial injury and perennial canker the apple orchards of Hood River are disappearing. It is a most discouraging situation.

Orchards Look Unkempt

The orchards look unkempt as compared with twenty years ago, partly because of the radical change in soil management. Then all the orchards were clean tilled; now they are in permanent sod, mainly sweet clover, with some vetch and grass. The clover, grass and weeds grow waist high, reaching up into the branches. This herbage is not cut, but is tramped down in spraying and may be dragged down before harvest. Undoubtedly this is much better for the trees than the clean tillage of 1907, but it does not add to the appearance of the orchards.

Hood River Valley is twenty miles long and two to three miles wide. The elevation varies from 1700 feet in the upper valley to 100 feet in the lower valley, at the Columbia River. Ninety per cent of the farm income of the valley is from fruit. There is a difference in season of ten to fourteen days between the two ends of the valley. The rainfall is about thirty-six inches, but none of it comes between May and October, so that it is necessary to irrigate several times during the summer. Majestic, snow crowned Mount Hood looms on the southern horizon. It may not cool the fevered brow of the harassed fruit grower, or put any money into his pocket, but it is an asset beyond price.

Use Stationary Spray Outfits

The cultural practices, other than soil management, have changed little since my last visit. Some orchards are thicker in tops than we would consider desirable in Pennsylvania. No beneficial results are secured with fertilizers other than nitrogen, and only two to four pounds of a nitrogen carrying fertilizer are used per tree. There is no smudging of apples, but it is sometimes used for pears. At high elevations in the upper valley, two sprays are considered sufficient, graduating down to six sprays at the Columbia River.

Stationary spray outfits are finding favor. I saw one that covers twenty-five acres of hill orchard which was made of a second-hand automobile motor, a pump from a spray rig and a thousand-gallon tank. Three-quarter-inch pipe was used for the header and one-half-inch pipe for the laterals, which run every fourth row. This outfit cost $1500, or only a few hundred more than the price of a power sprayer

(Continued on page 27)

"We have grown the *SAME CROP* on the *SAME FIELD* for 40 YEARS"

ONLY those who use Mapes Manures can grasp the full significance of the Mapes slogan, "cost little more—worth much more." For Mapes results are so remarkable, so outstanding and beyond comparison, that you must see them to fully appreciate them. Yet such experiences as the following should be convincing evidence to you that Mapes Manures are in a class by themselves:

"It was over 40 years ago," says Mr. A. Lloyd Shultz of Washington Boro, Pa., "that my father started to use Mapes Manures on a twelve-acre field of tobacco. We have grown this same crop on this same field for over forty years—each year using Mapes Manures and each year getting uniformly splendid results. The remarkable thing is that there has been no rotation on this field in all these years—tobacco after tobacco every year. The crop has always been so fine in quality that, all during this time, we have sold it to the same buyer and we have always gotten top prices—this year a premium of five cents a pound. This year's crop, in my opinion, and what is still more important, in the opinion of the buyer, is the best we have ever grown—in both quality and quantity."

Mapes Manures have always produced outstanding results because they have always been formulated on the basis of crop yield and quality. Two fertilizers of the same analysis may give widely different results because of the difference in the plant food materials from which they are compounded. Mapes Manures are first made right, then priced as low as possible. The little additional cost is returned many times over in bigger crops of better quality.

Just Mail this Coupon today

Try Mapes this year. Compare the crop yield, the crop quality and the crop profits with the results from any other fertilizer you can buy. Write today for a list of crop brands and prices of Mapes Manures. And remember, Mapes "cost little more — worth much more."

The Mapes Formula and Peruvian Guano Co., Dept. 12
270 Madison Ave., New York, N.Y.

Kerosene Light 10 DAYS TRIAL FREE
BEATS GAS OR ELECTRICITY

Agents Wanted

Make your home bright and cheerful, saving one-half on oil. Government and leading University tests prove this wonderful new Aladdin nearly five times as efficient as best round wick open-flame lamps. Burns 50 hours on one gallon common kerosene (coal oil). No odor, smoke or noise, no pumping, no wick trimming. Simple, easy to operate, won't explode. WON GOLD MEDAL. GUARANTEED. Prove for yourself, without risk, by

Ten Nights Free Trial

that Aladdin has no equal as a white light. If not satisfied, return at our expense. $1000 given anyone showing us an oil lamp equal in every way to this NEW MODEL ALADDIN.

GET YOURS FREE each locality to whom customers can be referred. In that way you may get your own without cost. Be the fortunate one to write us first for 10 DAY FREE TRIAL OFFER and learn how to get one FREE.

MANTLE LAMP CO., 330 Aladdin Bldg., Philadelphia
LARGEST KEROSENE (coal oil) MANTLE LAMP HOUSE IN THE WORLD

Make big money reports of full time. One easy selling plan sells on sight. Spare time workers, too. We start you without money. Sample lamp sent for 10 days trial and GIVEN FREE when you become a distributor.

Enjoy Powerful 6, 7 or 8 tube Radio: 30 Days FREE

Delighted thousands report Miraco's great performance. Coast to Coast, also Canada, Cuba, Mexico, with magnificent, clear cathedral tone. Built like a latest $300 set—don't confuse with cheap "Squawky" radios. Unless 30 days' trial proves your Miraco the MOST SELECTIVE, PUREST, FULLEST TONED and MOST POWERFUL DISTANCE GETTER among makes of same size—don't you get it FREE? Only manufacturers of low prices (10 points cheaper) could offer this. Write today for Free Catalog and Amazing Special Offer. Mail the coupon or a postcard.

Miraco comes completely assembled, ready to install and fully guaranteed. 3 yr. guarantee. Write for Free Catalog and Amazing Special Offer. ELECTRIC HOUSE CURRENT—no wet or dry batteries. Choice of beautiful cabinets (with built-in electrodynamic type speakers) or table models. Insure perfect satisfaction and save money. Don't buy parts—buy complete sets. Send for Free Catalog and Amazing Special Offer. Mail coupon today. Address nearest office.

HEALS

'Like Lightning'

Watch the udder and teats—the "small" but tremendously important element in milk-giving. For the hurts and troubles that constantly arise, nothing affords such immediate, such thorough results as Bag Balm.

This wonderful ointment, so clean and pleasant to use, starts healing at once. Healthy, normal tissues are restored in no time. For Caked Bag, Bunches, Inflammation, Chaps, Cracked Teats, Injuries, Cuts or Bruises of all sorts, Bag Balm brings quick relief. The regular use of Bag Balm makes easy milking and a full pail the rule. It cannot taint the milk.

The big 10-ounce can goes a long way—has scores of healing uses for farm and home. 60c at feed dealers, general stores, druggists. Mailed postpaid if hard to obtain locally. Free booklet, "Dairy Wrinkles" sent on request.

Dairy Association Co., Inc.
Lyndonville, Vermont

For 1 roupy hen or 1000!

Here's a tip on Roup control that thousands follow.

Carry a box of PRATTS Roup Tablets in your coat pocket. When you hear a sneeze in the hen-yard grab the bird and feed her one tablet.

Often that simple act nips an epidemic of roup in the bud.

Of course the *safe* thing is to add one tablet per quart of drinking water. *Especially* now when the weather is changeable. Pratts not only stops colds and roup from spreading, but it contains tonic ingredients that snap layers back into action.

Like every other Pratt remedy, there's a money-back trial offer. See your dealer.

PRATT FOOD COMPANY
124 Walnut St., Philadelphia, Pa.

Pratts Roup Tablets
55 years of success and fair dealing behind the Pratt guarantee. See your dealer for a money-back trial of any Pratt remedy.

PLEASE say: "I saw your adv. in Pennsylvania Farmer."

Are Birds Off Color?

Are Columbian Wyandottes supposed to have any dark feathers in their wings? Mine were hatched about the middle of June and most of them have the dark feathers in the wings. I purchased the eggs which I supposed were from good blooded hens and thought perhaps they would shed those feathers but I do not know how old they are when they get new feathers. I would like to sell the cockerels for breeders but do not want to if they are not marked right. Most of them have deep yellow legs but a few have a pinkish hue. Please give me description of a good Columbian Wyandotte.—Mrs. C. B., Bradford County, Pa.

Columbian Wyandottes should have the dark feathers in the wing such as yours have. It may be that the off-colored shanks are due to a slight lack of vitality in the birds that have them.

There are three principal breeds among the general purpose fowls: Barred Rocks, Rhode Island Reds and White Wyandottes. With the Leghorns these make up the majority of the purebred birds on our farms. However, there are many minor breeds of more or less prominence which are bred for one reason or another, and the breed you have is one of them. While you may find some demand for birds, there is a far greater demand for well-bred birds of the breeds mentioned, and to get into business on a large scale, one of them would be better. I would suggest that you get a copy of the Standard of Perfection, which will give you a description of the ideal bird. You will need this book if you continue in the breeding game.—R. L. S.-H.

Dried Bread in Ration Is Fattening

As I can get stale bread at a reasonable price, is it a profitable feed? Would it be good for little chicks? Would you feed it wet or dry and how much at a feed?—Mrs. H. L, Erie County, Pa.

Dried bread in the poultry ration is rather fattening, and could be fed with meal and sour milk for finishing off market poultry, in the form of a wet mash. It could be used also as a fattening mash as above for the noon feeding of Leghorns when laying heavily. I don't think that I would care to use it for baby chicks.

Stale bread has one serious objection: it often is moldy and in that condition would cause digestive trouble in a flock. This danger can be obviated somewhat by drying the bread in a hot oven which will kill the mold spores. This dried bread then could be run through the feed mill and added to the laying mash in slight proportion. Unless the bread is very cheap you may find that the trouble attached to feeding it will offset the low price. If you are feeding a small flock, on the other hand, you may find it profitable to use the bread, as very often things can be done on the side that are not profitable on a large scale.—R. L. S.-H.

Add Alfalfa Meal to Take the Place of Green Feed

This year I have been disappointed in the number of cabbage I was able to obtain for my chickens (340 fair heads for 150 laying hens). Should I try and purchase more and how many or could I use alfalfa meal? I am told such can be purchased to the same advantage at a reasonable price.—C.

Green feed is generally fed to fowls at the rate of three to five pounds per hundred birds per day. At that rate, if your cabbage heads weigh several pounds each, they should last your flock about as long as they are likely to keep. If you are able to secure a good grade of alfalfa meal this can be added to the mash at the rate of three per cent by weight, and in this proportion make a fair substitute for fresh green feed. The trouble with alfalfa meal is that it is not always possible to buy the best grade, the leaf meal. Much of the alfalfa meal on the market is largely ground stems, and contains too much fiber to be suitable in a poultry ration. If you feed the cabbage as indicated it should last nearly all winter, after which you can feed the alfalfa leaf meal supplemented by what occasional green stuff you are able to obtain until the new growth appears in the spring.—R. L. S.-H.

Sugar Beets Are Not Harmful to Birds

Kindly let me know whether sugar beets are good for laying hens. By mistake I planted sugar beets instead of mangels.—S. E., Pike County, Pa.

I know of no reason why you should not feed the sugar beets to your flock as green feed, or rather, succulence. The only precaution with these, as with other sources of vegetable material, is to feed not over five pounds per 100 birds per day. From three to five pounds is about right.—R. L. S.-H.

Nest Box Notes

EVERY once in a while I hear someone state emphatically that he, or rather she, will not eat a Leghorn, words and tone implying that the Leghorn is some close relative of the crow or buzzard. The truth of the matter is that a well-fattened Leghorn is a very good table fowl, and yields to the larger breeds only on the score of size. It is true, however, that Leghorns are larger than they used to be, as a well-grown pullet is supposed to weigh four pounds when ready to lay. Very often a fowl weighing from three to five pounds makes a better table bird for a small family than one that is heavier, unless the housewife is planning to serve chicken hash for the remainder of the week. As a rule, once a customer has had a nicely fattened Leghorn on the table, she will want others if the size is suitable to her needs.

* * *

A good many customers buy by the eye or by the notion, rather than according to quality. They are like the little girl who came into my apple cellar this afternoon, looking for an apple to eat. I gave her a nice mellow Grimes Golden off the top of the basket, which was about the best flavored kind I had. She took it and looked it over carefully, then put it back. It developed that she wanted a red apple.

* * *

I recently listened to a talk on poultry by one of the best-known poultrymen in the state. In the course of his remarks he brought out the fact that quality, rather than quantity, is often the factor that determines profit. In illustration, he told of a man who had been successful with a small flock and made up his mind to increase. So he added half as much again house room and equipment and doubled his flock. The net result was that he got about as many eggs from the large flock as he had been getting from the small flock, while his feed bill was twice the size. He had crowded his birds and had been unable to give them the good care that the small flock had received, so he took a loss instead of making a profit.

* * *

This is the time of year to put lights on the birds. We run ours in the morning from four o'clock on. The purpose of lights is not to fool the birds into thinking it is summer, but to enable them to eat more feed by increasing the hours of light. When lights are used it is necessary to feed more grain as well as to see that mash and water are provided.

* * *

Lights have the greatest effect on Leghorn pullets and young birds of similar breeds. On heavy breeds and older birds the effect is less marked.

White Leghorns Lead in Ohio

WITH a record of 335 eggs in 365 days, a White Leghorn hen belonging to Mrs. Gladys Dakan, of Franklin County, Ohio, has taken the lead in the first year's record of performance trapnesting being carried on in the state of Ohio under the official supervision of the Ohio Poultry Improvement Association.

The record hen of Mrs. Dakan is nameless, except for No. 149 on its leg band. Its ancestry is unknown, since it is one of a lot of chicks hatched out by a class in incubation at Ohio State University, where Mrs. Dakan's husband, Professor E. L. Dakan, is head of the poultry department.

This record hen violates most all of the established rules for high producing hens. She is quite wild, oversize, with a long neck, and looks more like a half-grown turkey than a prize laying hen. She weighs five and a half pounds and her eggs are unusually large, weighing 28 ounces or more on an average dozen. She has a ravenous appetite, but also is usually among the first on the roost at night.

At the beginning of the trapnesting, Mrs. Dakan noted that this hen was very coarse and the hen had a narrow escape from being discarded from the flock.

The hen, as well as Mrs. Dakan's entire flock of 250 that as pullets entered the record of performance trapnesting a year ago, has received the standard Ohio ration all through the period, no different from that fed many hundreds of other Ohio poultry flocks. The flock was fed liberal quantities of milk through the year, however. The flock is housed in an Ohio type poultry house. The average production of the entire flock will show that half or more produced better than 200 eggs average for the year.

Mercer County Poultry Exhibit Larger Than N. J. State Show

THE annual show of the Mercer County, N. J., Poultry Association was held at Hightstown, November 15 and 16, in conjunction with the annual meeting of the Mercer County Board of Agriculture and the Pomona Grange. Five hundred and ninety birds of various breeds were entered in all, a total said to be larger than that of the state show held recently in Atlantic City. While a large number of exhibition birds were entered, the show was featured by the entries in the utility classes, especially in S. C. W. Leghorns. Black Giants were also well represented, as this breed is very popular in the Hightstown section and vicinity. The members of the Blue Ribbon Poultry Club, an organization at Ewing of the Boys' and Girls' Poultry Clubs also entered birds of several varieties and a high order of excellence.

Corn, Potatoes and Apples Shown

At the same time a corn, potato and apple show was held by the County Board members, while the State Bureau of Markets had two exhibits on grading and packing. During the evening of November 15, Mr. Elmer Wene, of Vineland, gave a talk on poultry, while the next afternoon Dr. Beaudette, state poultry pathologist, addressed an open meeting of the Grange on poultry diseases, imparting some absolutely new information on roup which is of greatest interest to poultrymen everywhere. I hope to write an article on Dr. Beaudette's discoveries in the very near future and I am sure that no one who has ever had roup in his flock will want to miss it.

Cash prizes and ribbons were awarded to the winners in the farm products show, while the usual cash prizes in the poultry show were added to by very generous contributions in money, settings and merchandise donated by interested individuals, merchants and dealers who lent their support in this matter of special prizes. A list of winners follows.

Barred Rock Exhibition
A. A. Trotter, 2nd cock, 5th hen, 1st hen, 1st and 2nd pullet. Chas. Kinlock, 3rd and 4th cock, 1st and 5th cockerel, 1st hen, 1st pullet. Whites Hatchery, 3rd, 4th and 5th pullets. L. May Bruce, 2nd, 3rd and 4th cockerels. Harold Schaible, 2nd, 3rd and 5th hen.

White Wyandotte Exhibition
Coventry Farms, 1st cock, 2nd cockerel 1st and 2nd hens, 4th pullet. Ellis Smith, 1st, 3rd and 4th cockerel, 1st and 2nd pullets.

Columbian Wyandotte Exhibition
Freda. Bamman, 4th and 5th pullets. K. Bamman, 1st, 2nd and 3rd pullets.

R. C. R. I. Red Exhibition
James J. Meighan, 1st, 2nd, 3rd, 4th and 5th cockerels and pullets.

S. C. R. I. Red Exhibition
Paul E. Vranch, 3rd cock, 1st and 2nd cockerel, 1st hen, 1st and 2nd pullets. Mrs. Jennie Graves, 1st, 2nd, 4th and 5th cocks; 3rd and 4th cockerels; 2nd, 3rd, 4th and 5th hens; 3rd, 4th and 5th pullets. Elmer B. Dill, 5th cockerel.

Jersey Black Giant Exhibition
Charles Heal, 5th cock; 2nd and 4th cockerel; 2nd and 5th hens; 1st, 2nd, 3rd and 5th pullets. William Taylor, 2nd cock. William Tantum, 4th cock; 3rd cockerel. Harned and Hughes, 1st, 3rd cocks; 1st, 5th cockerels; 1st, 3rd hens; 4th pullet. V. Jadowski, 4th hen.

S. C. W. Leghorn Exhibition
William Tharp, 1st cock.

Dark Brahmas, Buff Brahmas and Mottled Hopdans
H. Lewis Schanck, all awards.

Buff Leghorns, S. C. Black Leghorns, S. C. and R. C. Brown Leghorns
Irving S. Bennett, all awards.

Barred Rock Utility
Buller Poultry Farm, 1st, 3rd, 4th cockerels. Harold Schaible, 2nd cockerel, 1st pullet. Elmer B. Dill, 1st, 2nd hens. Freda Bamman, 2nd pullet. K. Bamman, 3rd, 4th, 5th pullets.

White Wyandotte Utility
Frank J. Powell, 2nd cock. Coventry Farm, 1st cock, 1st cockerel, 1st, 3rd hen, 4th pullet. Irwin Baldwin, 2nd cockerel, 2nd hen, 1st pullet. Lauderdale Bros., 4th, 5th cockerel, 2nd, 3rd pullets. A. Van Cleve, 3rd cockerel.

S. C. R. I. Red Utility
Elmer B. Dill, 1st cock, 4th pullet. Mrs. Jennie Graves, 3rd cock, 1st, 4th cockerel, 1st, 2nd hens. Wm. Tharp, 2nd cockerel, 3rd pullet. Geo. Hoble, 3rd cockerel, 2nd, 3rd pullet. Margaret Kendall, 4th pullet.

R. C. R. I. Red Utility
Wm. Tharp, 1st cock, 2nd cockerel. Geo. Hoble, 1st cockerel, 1st, 2nd pullets.

S. C. W. Leghorn Utility
Paul Illian, 3rd cock, 5th cockerel, 5th hen, Mrs. Jennie Groves, 2nd, 4th, 5th cock, 1st hen, 1st cockerel. Kwality Farm, 1st cock, 3rd cockerel, 4th hen. Butler Poultry Farm, 1st pullet. Irving S. Bennett, 4th cockerel, 4th pullet. R. L. Scharring-Hausen, 2nd cockerel, 4th pullet. Wilburta Poultry Farm, 2nd, 3rd hens, M. Hartigung, 2nd, 3rd pullet. Wm. Tharp, 5th pullet.

S. C. Black Minorca Utility

Neat Letterhead Good Business

WHY do not more farmers use neat legible letterheads? Every day we receive inquiries asking for important information, where both the name of the subscriber and of the post office are merely scribbled and can hardly be deciphered. By using a post office guide we usually can be pretty sure of the post office; but we cannot work out the subscriber's name. All we can do in such a case is to address the envelope in long hand and scribble that name about the way the subscriber does and trust that the rural mail carrier can make it out. In a few cases we have given it up in despair and simply clipped the name and address off and pasted it on the envelope. This question of poorly written names and addresses is especially annoying where bulletins or similar material is to be sent out, as this sort of mail is not returned to sender when delivery cannot be made.

Legibility an Asset

All this trouble is avoided by the use of a good letterhead with the name of the farmer, and preferably of the farm, also, the post office with rural route and box, and usually a few words descriptive of the special crops or livestock raised on the farm. What a relief these are when they come in, and how much more promptly such letters can be taken care of, especially when goods are to be shipped. Mail order firms have thousands of shipments every year which cannot be delivered because of insufficient or carelessly written addresses. If one has an unusual name and cannot write very legibly, then better print the surname, at least. If a letterhead is used, don't use Old English or some other indistinct type but use good sized plain everyday type that any one can read at a glance.—I. W. Dickerson.

PAN-A-CE-A
puts hens in laying trim

Put your hen in laying trim —then you have a laying hen

YOU WANT music in your poultry yard—song, scratch, cackle.

You want an industrious hen—a hen that will get off her roost winter mornings, ready to scratch for her breakfast.

A fat, lazy hen may be all right for pot-pie, but for egg-laying—never!

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily, and see the change come over your flock.

See the combs and wattles turn red.

See them begin to cheer up and hop around. See the claws begin to dig in.

That's when you get eggs.

Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.
60 hens the 5-lb. pkg.
200 hens the 25-lb. pail
500 hens the 100-lb. drum
For 25 hens there is a smaller package

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

Dr. Hess Instant Louse Killer Kills Lice

"Checks Ravages of Worm Pest"

"I use your Tobacco Powder," writes L. Dykers, Paterson, N. J., "for the elimination of round worms in my poultry flocks. This checks the ravages of the pest and does not in any way interfere with egg production or the appetites."

Pulverized
POULTOBAC Tobacco Powder

Made from selected tobacco. Pulverized to assure results. Guaranteed 1.50% nicotine analysis. Mix 2 lbs. of PoulTobac in 100 lbs. of feed or mash. Also valuable for dusting. Folder free. Send $1.65 for 10-lb. Trial Bag, Postpaid. $1.50 West of the Mississippi. 100-lb bag, freight paid, $5 East of Mississippi; $6 West of Mississippi.

UNIFORM PRODUCTS CO., Dept. 382 Lancaster, Penna.

Starts Hens Laying

Here's a New Way to Get Eggs in Winter. Costs Nothing to Try

A letter from Miss Dama Wright, Vernonia, Ore., has a real idea for chicken raisers who are not getting plenty of eggs. She says:

"Late in October, our fifteen hens were not laying at all. I started giving them Don Sung, and for ten days they still didn't lay. But on the eleventh day they laid thirteen eggs, and it is wonderful what Don Sung has done for our egg basket."

Don Sung, the Chinese egg laying tablets which Miss Wright used, are opening the eyes of chicken raisers all over America. The tablets can be obtained from the Burrell-Dugger Co., 323 Postal Station Bldg., Indianapolis, Ind. Poultry raisers whose hens are not laying well should send 50 cents for a trial package for $1 for the extra large size, holding three times as much). Don Sung is positively guaranteed to do the work or money promptly refunded so it costs you nothing to try. Right now is the time to start giving Don Sung to your hens, so you will have a good supply of fresh eggs all winter.

More Milk Per Cow!

I'll show you how FREE!

Let me show you how to get more milk per cow, more income, and make the whole cost back in a few weeks' time. You'll get cleaner, richer milk—constantly. Thousands of farmers have been doing it for years, so I know this method works. And I'm ready to prove it with an

Iron-Clad, Money-Back GUARANTEE

that it will do everything I claim for it. You take absolutely no risk. And when I tell you that the whole cost for any number of cows is within your reach, and that the first purchase is the last one—no further buying necessary—you'll know that

Any Farmer Can Afford It!

Because it pays for itself in a few weeks. You'll not only have more milk—better milk—with this method, you'll have better COWS—cleaner and healthier.

I'll Send You the Facts—Free

Isn't it worth a postal card to find out how to get increased milk income—permanently? Write me personally, and I'll answer promptly. Just say "How can I get more and better milk?" Absolutely no obligation.

DAIRY

A. A. BORLAND, Editor
Head of the Department of Dairy Husbandry
Pennsylvania State College

Perry County C. T. A. Lowers Cost

THE Perry County Cow Testing Association finished its third year September 1, 1927, with 14 whole-year members and two part-year members. There were 216 cows in the association all or part of the year. The tester was engaged for sixteen days during the month by the association and worked at home the remaining part of the month.

Cost of producing butterfat in the association has decreased 2c per pound in the three years. This amounts to an 11 per cent decrease in cost. The returns per $1.00 expended for feed shows an increase of 32 per cent during the same period. This is accountable for by better feeding and herd management and the price of milk. This leads us to believe that the dairy business is on a sound, economical basis.

Considerable progress has been made during the three years the association has been operating. Several members have had very gratifying increases in butterfat production over the previous years. Harry Kraft's herd shows an increase of 56.3 pounds, H. L. Ulsh's herd 39.3, G. G. Beaver's herd shows an increase of 39.7 pounds in three years. Tressler's Orphan Home has increased their fat production 26.7 pounds in three years. Harry K. Stephens increased his butterfat production 20.6 as well as having the highest herd in the association in milk production.

The following is a summary of the results of the association for three years:

Year	Avge. no. cows	Pounds milk	Pounds butterfat
1925	249.67	7582	265.6
1926	236.34	7940	280.1
1927	151	8578	313.2

The results from the whole-year members are as follows:

Total average number of cows in the association	151.00
Avge. per cow: Lbs. of milk	8578
Pounds of butterfat	313.2
Percentage of butterfat	3.7
Value of product	253.50
Cost of pasture	13.29
Cost of roughage	45.91
Cost of grain	44.73
Total cost of feed	106.93
Value of product above feed cost	146.57
Returns per $1 expended for feed	2.37
Feed cost per 100 lbs. milk	1.25
Feed cost per pound of fat	.34

Following is a grouping of all cows producing over 300 pounds of butterfat: Group 1, above 400 lbs. butterfat, 14; group 2, between 300-400 lbs. fat, 58. Total number of cows producing over 300 lbs. of butterfat, 72.

L. F. Rothrock, county agent; J. Leslie Gabel, cow tester in charge; figures compiled by I. O. Sidelmann.

Eight herds with an average production of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. of cows	Breed	Lbs. milk	Lbs. butterfat
H. K. Kraft, Newport	7.00	R. & G. G.	7002	384.1
H. K. Stevens, Newport	6.42	R. & G. R. & G.G.	11,242	376.2
E. D. Deckard, Newport	6.25	R. & G. H., G. G.	6761	352.4
Mrs. Lottie Bernheisel, Loysville	12.33	R. & G. H.	9626	334.9
Tressler's Orphan Home	28.83	R. & G. H. R. & G. J.	9267	331.4
Orville Rumbaugh, Millerstown	17.42	R. & G. H.	8705	315.7
H. L. Ulsh, Newport	6.50	R. & G. H.	7869	306.9
N. B. Gabel, Newport	9.33	R. & G. H.	8370	306.6

Dairymen Show Cattle

Towanda Is Scene of Dairy Cow Beauty Contest

THE Second Annual Dairy Cow Beauty Contest of Bradford County, Pa., was staged in Towanda on Thursday, November 10th. This event, sponsored by the Chamber of Commerce, was the occasion of a great gathering of town and country folk on the streets of Towanda.

Guernsey, Holstein and Jersey beauties were vying for the high honors. Traffic on the street for two blocks was re-routed and the entire space given up to the contest. The beauties were first posed in groups according to breed and were placed, with the most beautiful at the top and the ranking ones following down the line. Then came the hardest work of the contest, that of picking the most beautiful ten from the breed winners and placing them in order of merit. The interest in this work was intense and many individual beauties had their group of men and women champions. When the smoke of the fray was over and the beauties finally lined up the ranking was as follows:

1. "Countess Sylvia Rag Apple," Holstein, owned by J. G. Kerick, Towanda, Pa.
2. "Sally of Chestnut Grove Farm," Guernsey, owned by G. H. Munro, Sylvania, Pa.
3. "Wesauking Hengerveld Burke," Holstein, owned by R. B. Arnold, Milan, Pa.
4. "Sheshequin Changeling Daisy," Holstein, owned by C. S. Chaffee, Ulster, Pa.
5. "Mayving of Edgewood Farm," Guernsey, owned by G. H. Munro, Sylvania, Pa.
6. "Catherine," grade Jersey, owned by McManus Bros., Mountain Lake, Pa.
7. "Florence Weigend Segis DeKol," Holstein, owned by Fitzgerald Bros., Wysox, Pa.
8. "Lady of Sunnyhillside Farm," Guernsey, owned by Wilbur Wright, Canton, Pa.
9. "Munro's Mollie of Edgewood Farm," Guernsey, owned by G. H. Munro, Sylvania, Pa.
10. "Lady Molly Daisy," Jersey, owned by T. P. Chaffee, Hornbrook, Pa.

Prizes of $190 in cash were awarded by the Towanda Chamber of Commerce with $75 going to the champion beauty of the show. In addition to these prizes the Bradford County Holstein Breeders' Association awarded a cash prize of $5 to each of the eight Holstein beauties.

E. B. Fitts, dairy extension specialist of Pennsylvania State College, was judge of the contest. J. M. Vial, also of State College, was marshall of the parade.

At 2:00 P. M. the crowd assembled in the Court House for a general get-together meeting presided over by Mr. H. C. Gates, cashier of Canton, Pa., Farmers' National Bank and a breeder of Holstein cattle. Judge Fanning, of the county court, gave an address of welcome which was responded to by Mr. A. W. Wood, a breeder of Guernsey cattle. Talks were given by Mr. W. B. Flory, of the American Jersey Cattle Club; Mr. Louis M. Merriman, representing the American Guernsey Cattle Club; Mr. J. M. Vial, specialist in animal husbandry, Pennsylvania State College, and Mr. E. B. Fitts, specialist in dairy husbandry, also of State College.

Mr. D. K. Sloan, the genial, efficient agricultural representative of Bradford County, was generalissimo of the day's program and the success of this striking event was due in large measure to his excellent qualities of leadership.—E. B. F.

Pure Milk Is Better Than Purified Milk

CLIPPING about the flanks, udders and underline during the stable months removes irritations caused by clinging dirt and filth. When a cow is clipped there is no clinging place for dirt. The animal is thoroughly cleaned merely by wiping with a damp cloth. The pores of the skin are kept clean and open.

Now what took place when the cow was permitted to accumulate its filth on its flanks, udder and underline? The pores were clogged, the clinging dirt and filth irritated the cow. To offset this condition the cow required more feed which instead of going into making milk was in a large part diverted to combating these abnormal forces. When thoroughly clean and comfortable the cow is in a normal condition, therefore, the result is more milk, clean milk, and because it is clean, sweeter milk with a better flavor.

Dirt falling into the milk contains uncountable bacteria and these are the bacteria that cause the milk to sour, giving it an off flavor. Tests show that 85 per cent of dirt which falls into the milk goes into solution and can never be strained out. It stays in the milk, gives it an off flavor and causes it to sour more quickly than would be the case with clean milk.

Most of the dirt which finds its way into the milk bucket drops from the cow into the bucket, therefore, the best way is to keep it out in the first place.

This is easily done by clipping the cow and cleaning it thoroughly just before milking, by wiping with a damp cloth.

Pure milk is better than purified milk.

Organize Ninth Bull Asso.

BUTLER COUNTY has just organized its ninth cooperative bull association. There are only eight states in the country which have more bull associations within their respective boundaries than this Pennsylvania county. The Keystone State leads all others in this phase of dairy improvement work.

Grange Confers an Honor Upon Student

WALTER C. Gumbel, a senior at Penn State, whose home is at Ellwood City, Pa., was chosen college Grange editor of the National Grange monthly, the official news organ of the National Grange, and also was named chairman of the 1928 National College Grange Conference.

Mr. Gumbel is Master of the Penn State subordinate Grange. Last year he was Grange editor of the Penn State Farmer, monthly publication of the students in the School of Agriculture. As Master of the Penn State Grange, he has initiated several movements which have placed this organization in the lead among college Granges. It was he who suggested the Cleveland conference and he sponsored it so well that five states, Ohio, Pennsylvania, Illinois, Michigan and Maryland, were represented.

Separate Meetings

FOR the first time in many years the New Jersey State Grange and the State Horticultural Society are holding their meetings on different dates. Due to a misunderstanding over dates, the Horticultural Society is holding its meeting one week later than usual.

The Grange meets as usual on December 6, 7, 8, 9, while the Horticultural Society will meet on December 13, 14, 15th. Otherwise the details of both meetings will be the same as in previous seasons. —A. K.

THE · NEWEST · AID TO FARMERS

A new-type farm electric plant that combines all the advantages of both automatic and battery charging systems.

DELCO-LIGHT

Read How Delco-Light Decreases Labor—Builds Up Profits. Jumps Egg Production up to 300% and More. Saves Pigs at Farrowing Time. Cuts Cost of Hired Help. Ends Fire Hazard.

• • • •

See Nearest Delco-Light Dealer for Full Particulars. And Mail Coupon for Free Book

Here is a plant unlike all others. With this new-type plant you can use up to 7 or 8 electric lamps and draw the necessary current right from the battery. Thus the engine runs infrequently. Less fuel is used. But throw on a heavier load. Instantly and automatically the engine starts—generates current to carry the heavier load—*plus a surplus supply to recharge the battery!* Thus only a small battery is needed. And even this small battery lasts longer.

"Electric light for yards and farm buildings. Power for farm machinery and home electric appliances. All for only $1.25 a month."
Robert McCue Mitchell, S.D.

Leaps to Success in 60 Days!

This new-type Delco-Light was introduced less than 60 days ago. Yet in this short time a whole nation has been won to it. Won to its new and revolutionary features. Won to its longer life and lower operating cost. And finally, won by its *low first cost* that puts it well within the reach of all who need it.

This combination Delco-Light is almost human in its action. An automatic throttle speeds or slows the engine to meet load demands. An automatic choke makes starting quick and certain—even in zero weather. Automatic Pilot Balls—found in no other farm electric plant—show at a glance the condition of your battery. Easy to tell about. But 15 years were devoted to scientific research before this scientific marvel was perfected. Even then General Motors withheld approval until 7 years of grueling field tests proved it worthy.

Worth 10 Times Its Cost

Talk to any farmer who owns a Delco-Light. He'll tell you that it brings new comfort and convenience to the farm. That it means a better, happier home. That it gives more time for important work. But that's not all. Delco-Light pays actual cash returns that far exceed its cost.

Note the pictures on this page. Note the extracts from letters underneath the pictures. We have hundreds of letters like these on file. Also hundreds of photographs. All tell the same story. Wherever Delco-Light is used on the farm, the home is happier, work is easier, health is better. And, on top of all, *the owner of that farm makes more money!*

Get the Facts

See the new combination Delco-Light that has forged ahead to leadership in less than 60 days! Write or phone or call on the nearest Delco-Light Dealer and ask for facts and figures. And remember—if this new plant doesn't fill your needs to the letter, there's a wide range of other Delco-Light models to choose from.

"We attribute an increase of 7,112 eggs in 3 months to Delco-Light in the hen house. These extra eggs brought an added profit of $177.60."
Mrs. G. A. Schlend Platte, S.D.

"Best investment we ever made. Light in the hog barn saves many pigs at farrowing time. Never spent a cent for repairs."
E. H. Sly, Platte, S.D.

FREE BOOKS MAIL COUPON

In the meantime, put your name and address on the coupon and mail to us. We'll send you the big, new Delco-Light Book—"A Day and a Night with Delco-Light", together with full information about the Combination Delco-Light described in this advertisement—absolutely free. Read what others say. Examine the evidence. Weigh the proof. Then see if you can find a single sound reason for trying to get along without Delco-Light.

Don't wait. Get the free Delco-Light Book and full information without delay. If you write promptly, we will include free, "The Miracle of More Eggs"—a valuable booklet on increasing egg production for large and small poultry raisers.

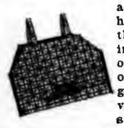
Gifts That Brighten the Kitchen Are Easily Made

FOR kitchen decoration, gingham is better than any other material. Its wonderful color brings cheer, and in better qualities, its sunfast and tubfast characteristics keep it fresh and colorful even after the hundredth tubbing. Curtains, clothespin and cord bags, table covers and oven cloths are but a few of the dozens of things that can be fashioned effectively from gingham for your kitchen.

The clothespin bag shown is easier to make than the ordinary gathered bag closed with a string.



Take a square of any colorful gingham the width of the goods, 32 inches. Double it on the bias. Cut off the corners to give it the convenient shape shown in the sketch. Cut a second square the same size from plain gingham for lining. The bag shown was made of a novelty plaid in blue, brown and yellow with red pin stripes, and the bag was lined with red. Bind the sides with the lining up to the slanted corners. Run dowel sticks through the two top openings and a piece of curtain stick in the bottom to hold the bag flat. Finish with arm straps. You can also add a loop between the straps on one side by which to hang up the bag. It will then fall open on its straps, making it easy to get at the clothespins.

Another kitchen convenience is a new type of oven cloth, or mittens. You will want several of these. You can make three from two and a half yards. Cut the gingham in double strips, one yard long. Cut double mits about seven inches deep. Pad the lower ends of the double yard strips up to about seven inches with flannel or asbestos. Also pad the mitten pieces in the same way. Bind the mits at the tops, baste to the double yard strip and bind the whole together. This will give you an oven cloth that will protect your frock, because the long strip between the mits covers the edge of the pan, while the padded mitten ends will prevent burned hands. This is one of the smaller kitchen conveniences, by the way, that sells like hot cakes at church fairs.

Still another appealing article which may be depended upon to make an instant hit, is the gingham kitchen apron with asbestos-lined square attached for protecting the hands when handling hot dishes. To make it, use a length of patterned gingham the width of the goods and two yards long, or the length of skirt you require if the 32-inch width is too long. Seam it, and finish the hem with a three-inch binding of plain gingham. The binding when finished looks like a hem one and a half inches deep on the inside and outside. Cut a double length of plain gingham the length desired for the waist, and the width according to your measurements. Usually about twenty inches is right. Cut a square neck from the center of the fold. Leave the sides open, and finish neck and sides with an inch and a half strip of the designed gingham, turning it under to represent a hem on either side, after the method of handling the skirt hem.

Gather the skirt and attach it to the waist. From your left-over strips of plain gingham cut a strip two inches wide and fifteen long. Cut a six-inch square also from the plain gingham for the hot dish holder. Seam on three sides, turn and finish the open end with snappers. Slip a piece of asbestos inside. Fold the two-inch strip and stitch on either side. Attach one end to the waist line of the apron and the other to the hot dish holder. This will give you a very easy to make, easy to slip on, kitchen apron with a hot dish holder always where you can find it. The pretty apron in the sketch was made from a plain orchid, and a novelty check gingham in violet, yellow and black.

Do You Can Meat?

LAST week we announced two additions to our bulletin service for readers. Have you asked for your copy of "Meat Canning" or of "Curing of Meat on the Farm"? These are free, only a stamped, self-addressed envelope being required. Send your request to Home Page Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The Kitchen Cabinet

FRUIT CAKE

CHRISTMAS time isn't far off, and since fruit cake is one of the things that improve with age, now is the time to think about making the Christmas fruit cake.

If you like to cook, nothing would please your friends more at Christmas time than a fruit cake.

The following recipe is not very expensive and is easy to make:

1 cup of fat
1 1-2 cups of light brown sugar
4 eggs
2½ cups of flour
1-3 teaspoon nutmeg
1-3 teaspoon cloves
1 teaspoon cinnamon
¾ teaspoon salt
½ teaspoon soda
½ cup fruit juice
½ pound of currants
1½ pounds of raisins
1-3 pound of almonds
¼ pound of citron
¼ pound of candied orange peeling

Rub the currants thoroughly with one tablespoon of the flour to remove any possible dust and to break off stems. Wash them carefully by shaking a few at a time in a sieve under running water or in a large pan of water. Rub with a towel, spread out on a cloth in a warm place to dry.

Blanch and shred the almonds and dry in a warm oven, but do not toast them.

Slice the citron and orange peeling very thin and cut into narrow strips. Combine the fruit and nuts with half of the flour, being careful to have each piece separately coated with flour. Cream the fat, gradually add the sugar, then the well-beaten egg yolks and part of flour which has been mixed and sifted with the soda, salt and spices. Add the remainder alternately with fruit juice, mix in the fruit with your hands, and last of all add the beaten egg whites; then fill into lined pans and steam for four hours.—May Foley, Nutrition Specialist, Massachusetts Agricultural College.

• • •

POP CORN SQUARES

Mix together in a large pan, six quarts of popped corn and one cup of peanuts or other select nut meats. Boil together 1 cup molasses and ½ cup granulated sugar until it hardens when tried in very cold water. Then remove from stove and add ½ teaspoon soda. When the mixture has foamed up well, pour it over the corn and nuts, stirring constantly. When thoroly blended pour into buttered pans and press down lightly. Set in a hot oven for a few minutes. Then cool and cut into squares. This goody keeps for a day or two (if securely hidden) and if thoroly heated thru during the oven process will remain delightfully crisp.—Mrs. Charles A. Reed, Pa.

• • •

NO EGGS? EAT CAKE ANYWAY

One cup brown sugar, one-third cup lard
Add one cup hot water and beat quite hard.
Two cups raisins without any seed;
Each of nutmeg and cinnamon, one teaspoon you'll need.
Add half a teaspoon of nicely ground clove,
Quickly stir it all up and set right on the stove.
Boil for three minutes, then hastily cool;
Add a teaspoon of soda—dissolved is the rule.
Use two and one-half cups of flour.
Beat, and pour in the pan.
Bake a full hour slowly, then serve to your man.—S. B. J., Ohio.

Winter Brings Evenings of Fun

TO THE city dweller, getting ready for winter may mean the purchase of a stylish fur coat to be paid for on the instalment plan, a new card table, a tea wagon as nice as Mrs. Smith's, or an evening gown for dances; but the woman who lives somewhere on a farm is more fortunate.

Not for her the buying of things she can ill afford because her friends and associates are doing just that. No starting of debts that will linger till the swallows nest again.

There is a need, however, of preparing for winter. There will be dark days, and stormy days, and days when the family will depend largely upon mother for cheer and entertainment. Winter ought to be the time when the farmer and his family are drawn closer together, the time when love of the farm is firmly implanted in the child's heart.

In getting ready for winter the farmer's wife should see that she has plenty of good warm clothing for every member of the family and plenty of clean, warm bedding. Blankets are easier to keep clean than quilts.

Should Provide Amusement

She should also provide the home with a few games to be brought out, one at a time on snowy nights, a big box of dominoes, crayons and drawing pencils, and last, but not least, plenty of magazines. Children who would not read a book will devour the same story in a magazine. The post man is the bright spot each day and he should bring a magazine of some kind to the country home frequently during the winter.

The radio and the telephone have done their part in making winter a season of delight to farm residents. The woman who can phone to her friends and farm neighbors need not feel shut in when drifts lie deep around her kitchen door. Turning on the radio brings concerts, lectures and news to the living room when winds howl outside. There is always less static in winter and this is a compensation for those who must "bide at home."—Lalla M. Thornton.

She Praises Cod Liver Oil

I CANNOT say too much in favor of cod liver oil for young children. Often on account of delicate digestive organs, these little ones miss the vitamins they should have thru foods they cannot assimilate, and this loss is so easily made up by giving cod liver oil. Fretful, teething babies are usually in need of something—some vital food element. Here again, the cod liver oil usually fills the bill. Until the child becomes accustomed to the taste, a tiny pinch of salt immediately following the dose is a help. But to most children it is not at all nauseating. I buy it by the pint for economy and very frequently take it myself. It is so valuable for "that tired feeling."—Mother of Seven.

Cod liver oil does the work of the summer sun in keeping children like these well through the winter

Built for Hardest Winter

Here's an arctic that's built for workers.

Uppers of heavy, tough cashmerette—to give double wear.

Lined with thick, warm fleece for northern weather.

Tough soles with an extra red rubber reinforcement where the hardest wear comes. Bumper-edged for rough going on frozen ruts.
Try and wear 'em out!

The Hood name across the sole shows the maker's pride in these arctics. Ask for them by name—Hood Red Treads. Other styles for all the family offer the same plus value. Look for the Hood Arrow—and save money.

Gifts That Brighten the Kitchen Are Easily Made

FOR kitchen decoration, gingham is better than any other material. Its wonderful color brings cheer, and in better qualities, its sunfast and tubfast characteristics keep it fresh and colorful even after the hundredth tubbing. Curtains, clothespin and cord bags, table covers and oven cloths are but a few of the dozens of things that can be fashioned effectively from gingham for your kitchen.

The clothespin bag shown is easier to make than the ordinary gathered bag closed with a string.

Take a square of any colorful gingham the width of the goods, 32 inches. Double it on the bias. Cut off the corners to give it the convenient shape shown in the sketch. Cut a second square the same size from plain gingham for lining. The bag shown was made of a novelty plaid in blue, brown and yellow with red pin stripes, and the bag was lined with red. Bind the sides with the lining up to the slanted corners. Run dowel sticks through the two top openings and a piece of curtain stick in the bottom to hold the bag flat. Finish with arm straps. You can also add a loop between the straps on one side by which to hang up the bag. It will then fall open on its straps, making it easy to get at the clothespins.

Another kitchen convenience is a new type of oven cloth, or mittens. You will want several of these. You can make three from two and a half yards. Cut the gingham in double strips, one yard long. Cut double

mits about seven inches deep. Pad the lower ends of the double yard strips up to about seven inches with flannel or asbestos. Also pad the mitten pieces in the same way. Bind the mits at the tops, baste to the double yard strip and bind the whole together. This will give you an oven cloth that will protect your frock, because the long strip between the mits covers the edge of the pan, while the padded mitten ends will prevent burned hands. This is one of the smaller kitchen conveniences, by the way, that sells like hot cakes at church fairs.

Still another appealing article which may be depended upon to make an instant hit, is the gingham kitchen apron with asbestos-lined square attached for protecting the hands when handling hot dishes. To make it, use a length of patterned gingham the width of the goods and two yards long, or the length of skirt you require if the 32-inch width is too long. Seam it, and finish the hem with a three-inch binding of plain gingham. The binding when finished looks like a hem one and a half inches deep on the inside and outside. Cut a double length of plain gingham the length desired for the waist, and the width according to your measurements. Usually about twenty inches is right. Cut a square neck from the center of the fold. Leave the sides open, and finish neck and sides with an inch and a half strip of the designed gingham, turning it under to represent a hem on either side, after the method of handling the skirt hem.

Gather the skirt and attach it to the waist. From your left-over strips of plain gingham cut a strip two inches wide and fifteen long. Cut a six-inch square also from the plain gingham for the hot dish holder. Seam on three sides, turn and finish the open end with snappers. Slip a piece of asbestos inside. Fold the two-inch strip and stitch on either side. Attach one end to the waist line of the apron and the other to the hot dish holder. This will give you a very easy to make, easy to slip on, kitchen apron with a hot dish holder always where you can find it. The pretty apron in the sketch was made from a plain orchid, and a novelty check gingham in violet, yellow and black.

INTENTIONAL SECOND EXPOSURE

The Fire Died at Midnight!

Cold gray dawn. Windows covered with frost. Dead ashes in the old stove. What a dreary way to start the day!

Even after the fire is started, corners will be cold all day. Floors drafty. Mother will keep a shawl over her shoulders. Baby will have snuffles. Cold feet a habit with the whole family.

Junk the old outfit and get one that is up-to-date.

YOUR family is entitled to modern heat in the house. There's no need to freeze at night and shiver in poorly distributed heat all day. A modern outfit will fill the house with mellow warmth, will glow with comfort all night, utilizing all possible value from the fuel instead of sending it roaring up the chimney.

When you buy a new outfit you want results and economy. Turn to a manufacturer who has worked out designs from years of study and experiment. Trust an institution where every man is proud of the company's reputation, from executive in the office to molder carrying splashing crucible of white-hot metal. Such are the advertisers in this paper. They make good equipment and their guarantee counts.

Steady warmth that circulates, leaving no cold corners, will keep the family vigorous and full of hustle, without the dragging handicap of colds. All this, yet economy that keeps your pocketbook cheerful.

Firepots carefully cast, with metal compounded so they will not warp, crack or burn out, doors accurately machined so they fit, solid character and sound design in every part. That's what you want to buy.

You Can Depend on the Heating Systems Advertised in This Paper

It pays to own a genuine Radiola

WHEN you buy a Radiola (and an RCA Loudspeaker) you know that you are getting the best in radio.

Back of every instrument bearing the RCA trademark are the resources, not only of the pioneer and leader in radio research—the Radio Corporation of America—but also the pioneers and leaders of the whole electrical industry—the General Electric and Westinghouse companies.

Three radio instruments designed by the engineers of these companies are specially adapted to give perfect radio reception and reproduction in communities away from the congested centers of population.

RADIOLA 16—Storage battery receiver of great compactness. For selectivity, sensitivity and tone quality, it sets a new standard for receivers in its price class. The cabinet is finished in mahogany

Less accessories	$69.50
With Radiotrons	$82.75

RADIOLA 20—Dry-battery-operated receiver, with amazing sensitivity and many times as selective as the average antenna set. Ideal for distant reception. Can readily be adapted to socket operation. Ideal to use with the new RCA Loudspeaker 100-A.

Less accessories	$78.00
With Radiotrons	$89.50

These are the new, compact, storage-battery operated Radiola 16, the popular dry-battery operated Radiola 20, and the new RCA Loudspeaker 100-A.

Either of these fine receiving sets, when used with the wonderful new loudspeaker, will faithfully reproduce the programs from the great broadcasting stations—the best music, university extension courses, crop and weather bulletins, and the news of the world. And either of these sets can be adapted for operation from the electric light circuit by the addition of socket power devices.

RCA-Radiola

I call this living!

A PIPE and P. A.—what a wonderful combination for pleasure! I often read about "what ten books" a man would choose for companionship if he had to spend the rest of his days on a desert island. I'd want books, of course. But the thing I'd insist on would be a warehouse full of Prince Albert!

I would never be lonely anywhere with my pipe and plenty of P. A. In fact, I'd be lonely in a crowded city *without* them. You'll begin to understand "why" when you get that first fragrant whiff of Prince Albert as you tamp it into your pipe. You'll know for sure when you light up.

Cool as a referee. Sweet as a decision for *your* side. Mild as cambric tea. So mild that you can smoke pipeload after pipe-load without a stung tongue or a parched throat. Yet P. A. has that rich, full tobacco-body that satisfies to the limit in every pull. A grand old smoke, Men.

I don't know what your present smoke-program is and I'm not going to ask questions. But I'm going to state in no uncertain terms that you don't know how good your pipe *can* taste until you load it to the brim with long-burning P. A. Millions of other contented jimmy-pipers will tell you the same thing. Why don't you find out for yourself?

P.A. is sold everywhere in tidy red tins, pound and half-pound tin humidors; and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—the national joy smoke!

Animal Dolls Please the Children

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5361.—One size. The cow requires ⅝ yard of 27-inch material and the horse ⅞ yard of 36-inch material. Pattern, 10 cents.

5970.—Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 42-inch size if made as illustrated in the large view will require 3½ yards of 40-inch material with ⅝ yard of contrasting material for facing on collar and panel. Pattern 10 cents.

6092.—Pattern includes the doll and the garments. Three sizes: small 12, medium 16, large 20 inches in length. A 12-inch size requires ⅓ yard for the doll and ⅝ yard for the jacket and overalls. To make as illustrated will require ⅓ yard of 27-inch material for the jacket and ⅛ yard for the overalls. Pattern 10 cents.

5964.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 3¼ yards of 36-inch material. If collar is made of contrasting material it will require ⅛ yard 27 inches wide. To bind at the free edges as illustrated will require 4½ yards of narrow bias binding. Pattern, 10 cents.

Send 10 cents in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Paper dolls can be made into walking dolls by pasting a piece of light, but very strong cardboard, to the feet of each doll. Cut the lower end of this cardboard of just the right size to fit the top of an empty spool and glue it firmly in place. By moving the spools, the dolls can be made to march, act in flag drills, and walk about.

This Christmas GIVE and SAVE!

Enjoy the Economies Offered by Our Vast Buying Resources

THE spirit of Christmas is the spirit of *Giving!* The rest of the year 'round we plan and devise to conserve what we have and add perchance to our worldly stores. Then Christmas comes with its wholesome traditions and symbols—its glistening candles, its radiant mistletoe, its kindly faced, gift-laden Santa Claus. Into the universal heart of mankind comes the feeling that living for others is after all the most glorious experience that Life holds.

Your nearest J. C. Penney Company Store is anxious to help you celebrate Christmas-tide in fullest accord with the spirit of the season and with economies. You will find in our Store a wide assortment of quality merchandise admirably suited for the purpose. Toys and practical gifts for the children, wearing apparel and footwear of all kinds for the man, woman and youngster, useful and attractive accessories for the home itself.

Jaciel
Toilet Preparations
Sold Exclusively In Our Stores
DELIGHTFUL GIFTS FOR THE HOLIDAYS

Roup Epidemic Killing Poultry

Birds sneeze, wheeze and choke. Throat rattles. Nose runs. Spreads rapidly. Act at once!

Readers who find colds or roup starting in their flocks will be interested in a letter written by Thomas Pulliam, Shiveley, Ky. He says:

"I have had birds with their eyes closed and every form of roup, and saved every one of them. Last winter I had a Barred Rock cockerel that was nearly dead. He had dropped from 7½ to 2½ pounds. I gave him Roup-Over and it worked like magic. In two weeks, he was back on the firing line and fighting every rooster on the place. I can't understand why people let their birds die with roup, when Roup-Over will save them."

It is amazing how quickly and easily colds and roup can be ended by this method. If the trouble is already started, a few drops of Roup-Over, applied in the nostrils, will usually banish every symptom in one day. Better still, a few drops used in the drinking water guards the whole flock against roup, colds, and other epidemics. A liberal supply of Roup-Over can be obtained by sending fifty cents (or $1 for large size holding 3 times as much) to **The Farrell-Dagger Co., 544 Postal Station Bldg., Indianapolis, Ind.** As Roup-Over is guaranteed to do the work or money refunded, it costs nothing to try. Readers will find it entirely different and much quicker in action than anything else ever tried for roup and similar infections.

This Christmas
GIVE and SAVE!
Enjoy the Economies Offered by Our Vast Buying Resources

THE spirit of Christmas is the spirit of *Giving!* The rest of the year 'round we plan and devise to conserve what we have and add perchance to our worldly stores. Then Christmas comes with its wholesome traditions and symbols—its glistening candles, its radiant mistletoe, its kindly faced, gift-laden Santa Claus. Into the universal heart of mankind comes the feeling that living for others is after all the most glorious experience that Life holds.

Your nearest J. C. Penney Company Store is anxious to help you celebrate Christmas-tide in fullest accord with the spirit of the season and with economies. You will find in our Store a wide assortment of quality merchandise admirably suited for the purpose. Toys and practical gifts for the children, wearing apparel and footwear of all kinds for the man, woman and youngster, useful and attractive accessories for the home itself.

Jaciel
Toilet Preparations
Sold Exclusively In Our Stores
Delightful Gifts for the Holidays
Face Powder in neat container 49c
Talcdin Powder in glass jar 49c
Toilet Water in glass bottle 98c
Set of three packed in handsome satin-lined box, $1.98
When ordering by mail, add 5c for each article to cover parcel postage—15c for the set.

And our Christmas prices are the same low prices enjoyed the year 'round. Your Christmas Dollar will go a long way here. The resultant savings will provide additional gifts for those whom you have not been able to include on your gift list before.

Please send your address so that we can send our Store News Catalogs to you from time to time.

A NATION-WIDE INSTITUTION— J.C.PENNEY CO.

The J. C. Penney Company wishes to millions of customers a Merry Christmas and a Happy New Year.

Roup Epidemic Killing Poultry

Birds sneeze, wheeze and choke. Throat rattles. Nose runs. Spreads rapidly. Act at once!

Readers who find colds or roup starting in their flocks will be interested in a letter written by Thomas Pulliam, Shiveley, Ky. He says:

"I have had birds with their eyes closed and every form of roup, and saved every one of them. Last winter I had a Barred Rock cockerel that was nearly dead. He had dropped from 7½ to 2¼ pounds. I gave him Roup-Over and it worked like magic. In two weeks, he was back on the firing line and fighting every rooster on the place. I can't understand why people let their birds die with roup, when Roup-Over will save them."

It is amazing how quickly and easily colds and roup can be ended by this method. If the trouble is already started, a few drops of Roup-Over, applied in the nostrils, will usually banish every symptom in one day. Better still, a few drops used in the drinking water guards the whole flock against roup, colds, and other epidemics. A liberal supply of Roup-Over can be obtained by sending fifty cents (or $1 for large size holding 3 times as much) to **The Harrell-Dugger Co., 511 Postal Station Bldg., Indianapolis, Ind.** As Roup-Over is guaranteed to do the work or money refunded, it costs nothing to try. Readers will find it entirely different and much quicker in action than anything else ever tried for roup and similar infections.

INTENTIONAL SECOND EXPOSURE

Let Us Do Your Christmas Shopping

For the Housewife

J660CX100—Sherbet or fruit will be doubly appetizing when served in this set of sparkling glass in crackled effect which can be had in green, canary or amber color. Six 5½-inch plates and six stemmed sherbets $1.00

G158CX100—A gift that every practical housewife will appreciate. A dish for relish, salted nuts, etc., of three-partition heavy glass set in a good-looking pierced metal frame with handle. $1.00

A18CX195—The hand-blocked scarf is the favored one this season. This one of heavy silk crepe comes in tan, navy, cocoa, gray, Madonna blue, with contrasting prints, white with black or plain solid colors. About 64 inches long.....$1.95

L16CX100—This dainty gift box of Irish linen handkerchiefs is particularly "Christmassy looking." The handkerchiefs have embroidered corners and can be had in all white, white with colored embroidery, or assorted solid colors. $1.00

18CX39—A gardenia is a dainty gift remembrance. You can choose one to match any costume from this array of colors which includes Neapolitan blue, orange, red, maize, peach, pink, gooseberry or tan. Also white with yellow center.....39c

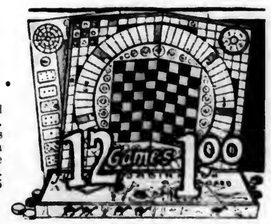
We have tried to make your Christmas shopping easy this year. Instead of being jostled about in crowded stores, you may sit in your most comfortable chair and plan gifts for everyone.

On this page are illustrated a number of articles which we shall be glad to purchase for you through our Christmas Shopping Service.

Here you will find a bill fold for father, a muffler for brother, handkerchiefs for uncle, linens and glassware for the house which mother or any other housewife will like, a printed scarf for sister, a cheerful flower for Aunt Mary's coat, games and books for the younger boys and girls—a variety of gifts to to please everyone on your list this year.

Send check or money order made out to *Pennsylvania Farmer* with list of articles wanted, stating number and giving color or other description necessary, to Gertrude S. Stewart, *Pennsylvania Farmer Shopping Service,* 261 South Third Street, Philadelphia, Pa. Please write your name and address very carefully.

Gifts the Children Will Like



F150CX100—The whole family will enjoy this combination game board with which to while away long winter evenings. Twelve different games may be played with it, such as Indian checkers, fortune-telling, steeplechase, etc. A heavy, brightly colored folding board size 15x15 inches. $1.00

B10CX50—All the children's classics which boys and girls love. This series includes Pinocchio, C. Collodi; Heide, Johanna Spyri; Alice in Wonderland, Lewis Carroll; Hans Brinker, Mary Mapes Dodge; Little Women, Louisa May Alcott; Aesop's Fables; Black Beauty, Anna Sewell; Budge and Toddie, Helen's Babies; Child's History of England, Charles Dickens; Little Lame Prince, Mulock; Tales from Shakespeare, Charles and Mary Lamb; Robinson Crusoe, Defoe; Treasure Island, Stevenson. Each, 50c.

180CX95—Here's a mechanical tractor set for the young farmer. Tractor with driver, wagon, rake and harrow. Heavy metal brightly colored enamel finish. Strong motor spring. 95c

137CX148—Baby will eat his food with much enjoyment from this imported set brightly enameled in gay colors with a pretty decorated design. Dinner plate, cups and saucer. $1.48

A180CX59—Lots of fun indoors on bad weather days with this Bubbie Set. Includes a rubberized apron, glass dish, soap and bubble pipe. Will make the most glorious big round bubbles. 59c

And the House

A48CX250—Every woman who is a lover of dainty linens (and what woman is not) will be delighted with this luncheon set of imported linen which comes in white grounds with neat colored plaids and border in pink, blue, gold or lavender. The cloth is 54 inches square and there are six napkins to match. The set is $2.50

K660CX100—This very attractive console set will furnish a decorative note on table or buffet. Rich colored glass in twisted spiral effect in lovely tones of amber, green or blue. A shallow center piece with four matching candlesticks.....$1.00

158CX69—Here is a solution to the problem of marking the table with hot dishes. One can use these very good looking imported metal pads in Dutch silver effect which have a thick felt base. Any housewife, whether she is the recent bride or one of long standing, will appreciate these. .....3 for 69c

The Men's Corner

6CX100D—The man who is hard to please will surely like this bill fold of genuine black pin seal or Morocco leather. It has three sections with space for driver's license and long fold for bills.$1.00

51SCX95—Although these scarfs were intended for the men, the women found them so good looking that they are wearing them, too. A good washable quality of silk broadcloth in white, gray or tan, with various colored patterns. 95c

516CX100—No man ever had too many handkerchiefs and "he" will be delighted with this addition to his store. A fine quality cambric with colored woven borders and embroidered initial in blue, tan or lavender. .....6 for $1.00

Always use Coleman Generators

For long service and full satisfaction, use Coleman Generators on Coleman Lamps and Lanterns.

The Coleman Q-99 Coil Generator is regular Standard Equipment on all Coleman Lamps and Lanterns. It provides more generating surface directly in the heat zone between the lighted mantles. This longer generating surface: 1—insures a completely vaporized charge; 2—prevents the concentration of carbon at any single point; 3—stays hot and resists degeneration. For these reasons the Q-99 Generator is preferred on Coleman and other similar gas-pressure lights.

The Coleman Q-77 Straight Generator (upper at right) is a good low-priced generator. It fits all Coleman and other makes of lights using the same size generators. It is cheaper in price because of fewer manufacturing operations and less metal used. The Q-77 is fairly satisfactory in general use, but the Q-99 is to be preferred for heavy duty service.

Be sure to get the genuine Coleman Generators. If your dealer is not supplied, write to us for full information.

Mink Are Wary of the Trapper

MINK traveling up and down stream or near lakes and ponds are tireless investigators of everything that excites their curiosity or suggests a good dinner.

Every farm boy knows that rabbits are very apt to make their burrows beside a tuft of broom sedge or other straw or tall grass, or close to a scrubby growth of bushes, with some dead leaves upon them, but in a somewhat open section, for while the rabbit wants a snug hiding place in which to sleep, it prefers to be able to see in every direction, so as to be ready to run at the approach of a boy with his dog, or a fox, mink or wolf.

Such burrows, if near creeks, spring runs or other water, will be visited by every passing mink. Two steel traps carefully set at such a burrow will be almost sure to make a catch soon, provided the burrow is within 20 or 25 feet of water, or nearer. No bait is necessary for these traps.

Fasten Drag to Trap

A No. 1 trap is better than a larger size, as the mink is a tireless struggler, and if a large trap is used it will likely mutilate the mink's foot or leg, possibly beaking the bone, and the animal will be much more likely to twist or pull a foot off and escape.

For the same reason a suitable drag fastened to the end of your trap chain is better than to stake or fasten it to something solid. The best kind of a drag is a slender sapling just large enough so the mink can drag it slowly away. Fasten the trap chain to the butt end of the sapling. Select one which has a somewhat bunchy, sprangly top, with limbs reaching out in all directions around the crown. Cut the ends of all large limbs off a foot or a foot and a half from the trunk of the sapling on all sides, to make a clawy drag which you can follow next morning. A mink caught this close

Minks are tireless investigators

to water is apt to make a break at once for the water, plunge in and drown before it gets over its fright.

If the weather is very cold, and the mink has come out of the water through a hole in the ice near by it will be pretty sure to make for the same hole, when the sprangly stub limbs on the sapling will catch upon the ice around the edges of the hole and hang there until the animal drowns.

This set is worthless during snowy weather, for when snow is on the ground mink seem to lose all interest in these rabbit burrows.

In good mink country traps should be visited soon after breakfast every morning. A half hour's delay may mean the loss of one or more valuable pelts, for mink are not like some other fur-bearers which soon quiet down and wait for the approach of the trapper. They keep up the struggle to escape as long as life remains.—I. H. Motes.

Bobbie—What is a niche in church?

Brownie—Why it's just the same as an itch anywhere else only you can't scratch it as well.

Hard Old Lady (to tramp)—Why don't you work if you are hungry?

Tramp—I tried that, ma'am, and it only makes me hungrier.

These Fine Clocks and Watches make inexpensive, quality GIFTS

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Friends;—I have read letters on our page of friends saying that they love to read. I agree with them and also with the author of this poem:

Play is a pastime,
Work is a satisfaction,
Food is an essential,
Sleep is a remedy,
A friend is a pleasure,
And a book is all five.

I try to read all the good books and magazines that I can get and find pleasure and profit in doing so. Even tho I go to high school I feel that a great deal of my education comes from the reading that I do outside of school. Often I have heard people remark that they don't like to read. I believe that is because they do not read the right kind of books. Here are some rules for selection of good books, magazines and newspapers that were suggested by T. De Witt Talmage in his essay on books:

1. Stand away from all books that give a false picture of human life.
2. There is always something suspicious about a bad book, in the index or style of illustration that you may see before you read it.
3. Stand away from books that corrupt the imagination and inflame the passions.
4. Cherish good books and newspapers. Beware of bad ones. One column may save your soul, one paragraph may ruin it.
5. Stick to Hawthorne, Hunt, Cooper, Shakespeare, Irving, Jack London, Louisa M. Alcott, Kipling and many other familiar authors.

I have also known boys and girls who would have given anything for a good book to read but they did not have anything. I only have a small collection of books. Forum friends, those of you who live in the country could overcome this by starting a book club. Ask all the young people of your community to join, each to furnish a book. A list can be made of the members, each numbered and the books passed from one to two, two to three, and so on, on given dates. This is a good remedy for the lack of books for reading. I hope that some friends will try this and I wish them success.—Irene Zimmerman, (X), Burlington County, N. J.

Your letter, Irene, is quite interesting. I hope the older Forum boys and girls will note the rules you quote on the selection of books.

THE FORUM EDITOR.

Answers to riddles submitted by Edna G. Huegel, Schuylkill County, Pa.

1. A wagon.
2. Because it can't chew.
3. A newspaper.
4. None; the crow takes them in.

Dear Cousin Ruth:—I have never written to you before but I always read the Forum page. It is very interesting to read the other boys' and girls' letters for I am a cripple and can't walk. I can't run and see the birds' nests but mother watches them and tells me all about them. I have a cat named Maggie and an Airedale named Judy. She had five little puppies but she didn't like one of them and would carry it out and drop it in the high grass.

I live on a farm. It is 2080 feet above sea level. Near my home is an old mill where Indians used to grind their corn.—Kenneth Rose, Clearfield County, Pa.

Dear Forum Editor:—I am in school now. I like school very much. We play games of all kinds. I play the organ when we sing. We just got a new stove Monday for the school house. It is a big one and it throws a lot of heat.

My teacher gave me two plants and they are growing nicely. One is Periwinkle and the other is a Joseph Coat. I will have to close now and get some of my school work done.—Harriet Marey, (X), Luzerne County, Pa.

JUST FOUR
Mary M. Doerr, Lancaster County, Pa.

Dear Forum Friends:—We all know that in a little village or a large city there are people who are called "shut-ins." They never see the things we see nor have the good times we have. They are in-doors all the time. Some may be aged and feeble or some may be crippled and sickly. I often think what joy they get in reading letters of good cheer from another country. I would like to spend my spare time writing letters to these "shut-ins."—Bertha Rupert, (X), Clinton County, Pa.

Dear Cousin Ruth:—I have a little dog about four months old. She is a curly dog and her name is Peggy. We have a big Shepherd dog, too, and his name is Roger. We have some cats. Their names are Betty and Blacky. We have more cats but I do not know their names. We have cows, horses, chickens, pigs, ducks, geese and guineas. My brothers milk cows. When we feed the pigs you should hear them holler.

I have a play house and I go out in it sometimes. I don't have any playmates around here but boys to play with. We have a great big yard to play in. Sometimes I hunt eggs with my brother. I am eleven years old and am in the seventh grade. I have to walk a half mile to school every morning and evening. My brothers are both in the sixth grade. I give my dog a bath every week.—Leona Buchert, Montgomery County, Pa.

Answers to riddle submitted by Sarah Gongaware, (X), Allen County, Ind.

1. When the cow jumps over the moon.
2. Pumphandles.
3. Sun.
4. Chimney.

Dear Forum Friends:—I have been reading the letters from the Forum members and friends and I think they are very nice. I am sending a recipe for

COCOA COOKIES

½ cup shortening
1 cup sugar
2 eggs
1-3 cup milk
½ cup cocoa
4 teaspoons baking powder
4 cups flour

Cream the sugar and the shortening together; add milk slowly, then the eggs well beaten and the cocoa. Sift the flour and baking powder together and add to make a stiff dough. Roll out one-fourth inch thick and cut. Bake in hot oven 12 or 15 minutes. Decorate with your favorite icing.—Marion Ford, Bucks County, Pa.

Each Block Tells a Story

THE quilt block illustrated is but one of the twenty included with our Colonial History Quilt Pattern. Quilting is fascinating and you'll find this historical pattern quite interesting. Each block is eight inches square, and comes on a hot-iron transfer pattern by which you can stamp the design on a square of white muslin. The character is then embroidered in outline stitch and the twenty set together as pictured on page sixteen of our November 5 issue.

The twenty transfer patterns in one package with full instructions for making will be mailed postpaid upon receipt of fifty cents. Send orders to Editorial Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

Dear Forum Editor:—I received my membership pin and thank you very much for it. As soon as I got it I was dancing all over with joy for I thought I wasn't going to receive one.

I'm sending you some riddles:

1. How many slides has a box?
2. What goes up and down at the same time?
3. What is full of holes and yet holds water?
4. Where do you get meat besides from animals?
5. What are sometimes red, yellow, green, brown and black?
6. What goes around and around the house and leaves a patch of white on every leaf?—Nina I. Cox, (X), Chester Co., Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Here's a pretty state of things! The whole family of some of Our Little Folks decided to move to another part of the country and they had to take apart some of their furniture to get it packed just right. This week we are going to help them straighten out at least part of their belongings. In the list of words below you will find that every other letter is omitted, but, if you look at the very long list of letters at the very bottom of the puzzle, you will find the letters which have been left out. If you fill them in at the right spaces you will find the name of twelve things—all what you might call furniture, this time—which we can arrange in order for this family of ours. Let me have this list, either on a postcard or in a letter, by December 10th. Remember to tell me your name, your post office address, the name of your county, when your birthday comes and how old you are.

LITTLE FOLKS CAN MOVE THIS FURNITURE

HI AL E IRR OKAE TV ERGRTR APT IN LC ITR RSE

The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the November 12 issue (the jumbled verse) is:

Old Mother Hubbard went to the cupboard
To get her poor dog a bone,
But when she got there the cupboard was bare,
And so the poor dog had none.

The prize winners are: Karl Emmett Andrews, age 8, Chatierol, Pa.; Ada M. Guest, age 12, Glen Moore, Pa.; Evelyn Irene Kilgore, age 8, Sandy Lake, Pa.; D. Lynn Matthews, age 8, Pompton Lakes, N. J.; Robert L. Neff, age 10, Ronks, Pa.; Minnie Irene Ober, age 7, Elizabethtown, Pa.; Sadie Schultz, age 8, Bally, Pa.; Dorothy Snouse, age 11, Bedford, Pa.; Elsie M. Steeley, age 10, Bedminster, Pa.; Kathleen Wise, age 7, Terre Hill, Pa.

(Copyright by Underwood & Underwood)

1.—Miss Alice Davis, daughter of the Secretary of War, and Mrs. Davis, who is to be presented to Washington society this season.

2.—Later he will want more speed, but now a Russian wolf hound is fast enough for nine-month-old Jackie Horrall.

3.—The U. S. S. V-4, at present the world's largest submarine, was launched at Portsmouth, N. H., on November 11th. This mine-laying undersea craft will carry eight officers and eighty men. Its equipment includes radio, apparatus for distilling fresh water, motor boats, a motion picture outfit and a branch post office.

4.—A 265-pound black bass, or jewfish, was the catch of Sergeant Noah E. Dillman of the U. S. Air Service, when he went fishing in the Panama Canal Zone recently.

5.—An aerial view of Fort Amador, Panama, made by an army flier.

6.—The Ihatiak Building, the skyscraper of Pdang-Padjang, Sumatra. Its architecture is simple, yet beautiful. Many buildings of this kind were destroyed in the earthquake of 1926 which rocked the island of Sumatra in the East Indies.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

I LOOKED about and saw with panic that I was almost alone. To the right, a knot of men were still firing. An occasional shot came from farther down the line to left and center. I dropped back to better cover and worked around to join the group I had seen.

Pugh was doing most of the shooting. As I joined them, five men, powder horns empty, started for the rear. There were four others who still fired.

The gunsmith cast an anxious glance at the approaching militia.

"They'll sneak up from behind if we don't take care," he warned. "Let's find a better place."

We dropped back through the woods, Pugh peering keenly from right to left. Then his face brightened. He beckoned us on and broke into a trot.

It was a bit of open country he was leading us to and on the far side, distant some fifty yards from the woods, a jagged pile of rocks raised themselves. We raced for this, and were safely hidden behind boulders when the coat of the first militiaman showed up among the trees.

"Built like a fort," Pugh exulted. So it was. To attack us from the east or north, the militia would have to come across open ground. To the west there were scattering trees and to the south a pretty dense tangle of woods and brush. For a moment, we were secure enough.

"Chances are I'm the best shot here," Pugh suggested. "Load and let me shoot."

The three of us—one man had left us during the retreat—fell to work. Pugh kept up a steady fire, and from his exultant comments, I gathered that his shots were counting. Bullets were striking among the rocks, too, but for the moment did us no hurt.

Off to the north, we could still hear the crackle of rifle fire and the occasional boom of the big guns. Presently a dense smoke rose in that quarter and drifted south with the breeze. The rifle fire almost stopped.

"Set fire to the brush," Pugh commented. "They was scared to shoot it out with our fellers. Now we'll get more notice."

We did. Gradually the edge of the woods to east and north were lined with puffs of smoke. Bullets began coming closer. We dodged involuntarily as we loaded.

Blood spurted in my face as I rammed home a charge. The man next to me groaned and clapped a hand to his face. The bullet had gone through his jaws.

"Tie him up," ordered Pugh briskly. "You fellows get out of here. Things are getting too hot. I aim to do a little more shooting first."

I had been taking orders from him so long that I obeyed without question. The wounded man crept away first. The second man followed, both taking the passage south through the brush. On hands and knees I prepared to follow.

"Five more shots," I heard Pugh mutter as he shook his last powder horn. Then I was buried in the tangle.

Twenty yards ahead I raised my head in the shelter of a bush to look back. Pugh was out of sight on the other side of the rock outcrop. But nearer me, something moved. I saw a head and a rifle come up out of the grass and then a man in homespun started to crawl up the rocks.

"Pugh, watch out," I cried. "Look behind.

I saw the crawling man give a startled look back and then slide down into the grass again. A shot roared almost in my ear and I turned to face a man with a smoking pistol not ten yards away. As I dived for cover, something caught my right foot. I kicked loose in a panic of terror, took three quick steps and fell headlong. Then a terrific weight landed on my back and my senses went out in a moment of terror and pain.

WHEN I came to, I was lying flat on my back with the sun in my eyes. I groaned and rolled over. My head ached cruelly and felt as if the side of it were a great sore. For the moment I was too sick and faint to think where I was, and lay still with my eyes shut.

"Did they finish him?" someone asked.

"No, he'll live to be hanged," another answered.

I opened my eyes. I was in the middle of a group of sixteen or eighteen men, most of them tied two and two by their wrists. Pugh was standing over me. He stood between two men, his right wrist fastened to the left of one, and his left wrist to the right of the other.

"That was a good turn, lad," Pugh commended. "But a bad one for yourself. They'd got me anyhow, as you might have known."

The men around me talked in low tones. A strong guard with fixed bayonets was placed around us. Here and there on the field, men were picking up equipment. Several stretchers were going to and fro.

The fight was over. Pugh had made a last stand. The Regulators, with ammunition gone, had made a safe retreat for the most part. There was only this handful of prisoners. The loss of the militia had been fairly heavy—some said thirty were killed. Of the Regulators, it was harder to tell. The guards said ten bodies had been found.

A column came marching past us, headed west. I thought at first these men were sent out in pursuit. A man to my right scoffed at the suggestion.

"They daren't go far," he declared. "Just guard duty, for fear our men will come back and kill some more of them."

This man's face seemed familiar. I studied it a minute.

"You're Mateer," I exclaimed. "You went with Thompson and Caldwell. What happened?"

It seemed that Caldwell had left, after the governor had refused to consider negotiations. Then Thompson, a downright sort of man, told the governor to his face what he thought of him. That done, he turned to follow Caldwell.

Tryon was in a rage. "You stay here and in irons," he cried.

"I'm no prisoner," Thompson retorted and started to walk off. Tryon pulled a pistol and killed him. Mateer, although protesting that he was an ambassador under a white flag, submitted to being bound and turned over to the provost.

As Mateer finished, there was a commotion at the guard line. A squad of soldiers had come up. I saw a face I knew. Fanning was at their head.

"James Few," he called.

A prisoner a few paces from me got up and went forward. I did not see his face.

"I suppose you think you've got me now, Fanning," he said sourly. "Twice I thought I'd fixed you in the fight. Would have, too, if you hadn't run."

I saw a sergeant's arm swing. The man groaned, then sprang forward. Two soldiers gripped his arms.

"Hit him again if he don't keep still, sergeant," ordered Fanning savagely. The squad moved on.

Presently my head felt better and I got up. Nobody paid any attention to me. Even the guard had their eyes turned toward the wood to the west. I saw soldiers busy about one tree that stood out from the rest. Some brought ammunition boxes and piled them on the ground under a big branch. I looked at this, and was puzzled. Even when a rope was flung over the branch I was still slow to understand.

"What is it?" I asked Pugh.

"Few's going, I reckon, Fanning had it in for him."

I WATCHED fascinated. A knot of soldiers came marching up to the tree. A group of officers followed. The soldiers obscured the view for a minute. Then I saw a man, with his hands bound behind him, precariously balanced on a pile of boxes. A rope was about his neck.

"They're going to hang him?" I gasped, and went suddenly cold and sick. Pugh looked down at me and nodded. His face was hard, but lightened suddenly by a friendly concern.

"Look the other way, lad," he warned. "They'll be kicking the boxes out from under him in a minute.

I turned and stared at the ground. There was a long moment of silence, and then a long drawn "Ah" from the crowd. I put my hands on Pugh's arms and gripped him tight.

It was a moment before I looked up at him. His face was still toward the tree were poor Few was hanging.

"Why did you look?" I asked.

He smiled briefly. "Might as well get used to it, I reckon. Got to know how to act when my turn comes."

The horror of that sunk into me slowly. Would my turn come, too?

That night we lay on Tryon's campground by the Alamance with a ring of guards around us. Nobody bothered to give us anything to eat. Some of the prisoners plucked up courage to ask but the militia men on guard laughed at the request.

"Hardly enough for us," objected one bearded farmer. "I got nothing hardly but a lick of the spoon. When there's enough for the army and some over, then you outlaws may get a chance to eat."

WE DID get water and were permitted a fire. No one had blankets, however, and we sat around the coals all that chilly spring night. We were still tied two and two, for the most part. I was lucky in being an odd man and was not bound as yet.

Next morning the army formed to march. We prisoners were put in the center of the column. The baggage had come up by that time and fell in the rear. To our surprise we only made three or four miles on the day's march and went into camp near a mill.

As soon as the men were given permission to fall out, there was a rush of officers and men to the tent of the commander. We watched from a distance and saw what seemed to be a small mob working up to the bayonet of the sentry on guard. Officers appeared and seemed to be trying to calm the group.

It looked like mutiny to me, and I suggested this, hopefully, to Pugh. He looked and shook his head. Then, with his two fellow prisoners in tow, he worked over to the nearest sentry.

"Had anything to smoke lately, Ezra?" he asked in a whisper.

The guard looked up quickly, then glanced back to see if an officer was within hearing.

"Been out for two days," the guard commented sadly.

"Feel in my left pocket," Pugh suggested and turned himself about. The guard plunged his hand in, brought it out with a small sack gripped in the fingers. He opened the mouth of the sack, sniffed and looked almost happy for a minute.

"What's up over by the governor's tent?" Pugh asked.

The guard laughed. "Passel of fools trying to collect their rewards. I told 'em they wouldn't get any. Before the fight, orders give out that anybody that took a horse or mare from you fellows would get 20 shillings; there was ten shillings for every gun and five shillings for every saddle and bridle. They picked up a few yesterday, not many. Last night, though, half the camp broke the lines and went out stealing horses and saddles from farmers around here. So now you'll find a fellow claiming a reward for a horse and a farmer claiming he ought to be whipped for stealing it. I picked up one or two things myself, but I ain't after any reward. Too much of a toss up whether you get the shillings or a whipping."

"Watch out," Pugh warned suddenly. "officer coming."

We turned away a step or two. The guard stiffened up and took on a wooden expression. Up strolled a very pleasant looking young man, evidently of the Governor's staff. He was one of the few in full uniform and looked very well in it indeed.

The sergeant of the guard came hurrying up.

"Tell your men," instructed the officer, "that I lost a cloak on the battlefield yesteday. It was a big Hussar cloak and I am willing to pay liberally for its return." He paused "Two pounds. If anyone has found it, send him to my tent."

He started to move on and then glanced back over his shoulder.

"Tell them, too," he added, "that it is doubtful if the cloak can be sold for more than a pound or two. Moreover, if it is found that a man has the cloak and refuses to turn it in, he shall be married to a black jack and whipped till he is so sore the very thought of a cloak on his back will pain him."

Pugh called to me to watch the guard shortly after this. He was very uneasy, scratched his head a good many times and shuffled about. After half an hour of this, he sidled over to the sergeant. We could not hear what was said but presently the guard left the ranks and came back with a package big enough to contain a cloak. He gave this to the sergeant and he, after summoning another non-commissioned officer to take his place, strode off with the bundle.

In fifteen minutes he was back. The guard brightened up and went forward to meet him. Money changed hands. The guard's jaw dropped.

"TEN shillings," he exclaimed.

"He said two pounds."

"That's enough for you," warned the sergeant sharply, "back to your duty or I'll report you."

We heard a good deal that day, out of the corner of the guard's mouth about what thieves there were in Tryon's army and particularly among officers of all grades. This maybe made him more friendly to us, but indeed I found no great hostility toward us on the part of any of the militiamen. They regarded us with some dislike since we had been the cause of bringing them out on an unpleasant duty, but they seemed to know very little about the rights or wrongs of the case or to worry about them. These were the men only, of course, for the officers for the most part were too careful of their position to speak with us. Another reason, as I learned later, was that some of the officers in the militia were suspected of being moderately friendly toward the Regulators and needed to be on their guard toward us on that account, lest the governor's suspicions should be further aroused.

Along toward noon, there came the sound of firing from the battlefield, and the army got under arms hurriedly. A few companies marched out and came back again, after a few hours. From the gossip of the soldiers, we learned that a party of Regulators, arrived too late for the battle, had gone out on a sort of sightseeing trip to the field. They were fired on by sentries, returned the fire and fell back.

From all we could hear, a number of small parties still hung around the army. This was not altogether a good thing for us, since it made the soldiers timid about foraging and kept them on short rations, and us on next to nothing. Indeed, most of the soldiers' talk was not about the fighting or the Regulators, but about the poor rations and how soon they could start home.

Toward evening, more prisoners to the number of ten or twelve were brought in. No one I knew was among them, and from one I got encouraging news. He told me he had heard that my uncle and his men were in the neighborhood and were engaged in making life uncomfortable for the Governor's foraging parties. Of Carnes, Jennings and Kraft, he had not heard, and I began to be fairly confident that they had got safely away.

Next day we made a march of good length and came finally to a place I recognized. It was Husband's farm. Now, however, the cavalry and artillery were encamped in his wheat fields and the rest of the army spread over his clover and meadow. Fences were being torn to bits to make camp fires and the squawking and bawling from the barns told that his livestock was going to make a meal for the army. That night there was plenty and we ate heartily for the first time.

SOME of the officers stayed in Husband's house that night, I think. Next morning, I noticed a party of them riding over the fields. Wherever fences still stood, they ordered another bonfire made, and maneuvered the troops in leaving over the last patches of standing grain. As we went plodding down the lane, I looked back to see flames licking about the timbers of the house.

In the next few days, this process got to be familiar. James Hunter's farm was destroyed in the same way. Parties were sent on the flanks to lay waste the farms of other prominent Regulators. As we prisoners came trailing along in the wake of the column, we walked through a land made desolate—grain trampled flat, fences and buildings burned, stock run off and killed. With what labor these farms had been reclaimed from the wilderness in the last five or ten years! Now all was gone.

If I had joined in the fighting at Alamance on impulse, I became a Regulator in dead earnest as I made my pilgrimage with Tryon's prisoners. The destruction of the farms offer a greater reward. To any man of you who will go out and bring in one of these men, a free pardon is offered. Before you go you must swear to return, whether you succeed or not; if you so swear and fail to return, then you join at once the ranks of outlaws. Keep that in mind and remember that as an outlaw, any man may kill you without fear of punishment and indeed, in this case, with hope of reward. You all have enemies, who would like to pay a debt and gain a fortune at the same time."

He paused and we looked foolishly at each other. After awhile, three men edged over toward Fanning. Two he sent back, but the other, after a long talk, went with him. Around the fire again, I began to blame the man who had gone for a coward and a traitor.

"Merrill is honest enough," Pugh said. "He will be back and Husband will not be with him. And likely, he will be hanged as soon as he returns."

I asked why he took the leave of absence, if it only insured his death.

"MY GUESS is this," said Pugh. "He wants a few days to get home, settle his affairs, and be prepared to die with a quieter heart. A few days like that are worth some trouble to get. If it weren't for cheering up those scoundrels, I would offer to go out myself."

It struck me that the governor was taking a chance on men like Merrill ever coming back. Pugh took a different view. Fanning knew his men, he explained. Only these over whom he had some hold and who had been proved to be men of honor would be let go.

It was that night, I think that there descended the first of the rains that were to plague us for days. We woke along in the early morning to find the rain coming down steadily enough to wet us clear through and to subdue our fire to a mere flicker. The fuel caught but poorly and we hung about, puffing and fanning the blaze for an hour, until it began to flare up properly. For a few minutes, we got some small comfort out of it, although we were too many for the small fire and fought and jostled for a front place.

By that time the guards, marching in a sullen and wet ring around us, took envious note of our comparative comfort. Their fire had gone out at the first puff of rain and they had not been able to build it up. They consulted together briefly, and then ordered us away to a new, wet and fireless spot and took over our fire for their own use.

Poultrymen in Europe Use Colony System

This poultry farm of the colony type was visited by a group of American farmers last summer while in Denmark. G. B. F.

Road Foreman (calling at house opposite)—Excuse me, madam, but have you been singing this morning?

Lady of the House—Yes, I have been singing a little, but why do you wish to know?

R. F. (with obvious embarrassment)—Well, you see, my men have knocked off twice already, thinking it was the dinner whistle, so I thought I had better ask you not to hang out quite so long on that top note.

A Family Problem

A boy and his sister were on their way to Sunday school. They were met by their teacher, who inquired about the size of their family.

The boy said: "I have as many brothers as I have sisters."

The girl said: "I have twice as many brothers as I have sisters."

From these facts the teacher could tell how many boys and girls there were in the family. Can you?

A big man entered a hotel, placed his umbrella in the stand and tied a card to it on which was written: "This umbrella belongs to a champion prize fighter. Back in ten minutes."

When he returned the umbrella was gone. The card was still there. It read:

"Umbrella was taken by champion long distance runner, and I ain't coming back at all."

Pat Murphy was taking his first flight in an airplane. The pilot was taking him over New York City. When they were up about 3000 feet the plane suddenly went into a nose dive.

"Ha, ha!" laughed the pilot, shouting to Pat, "fifty per cent of the people down there thought we were falling."

"Sure," admitted Pat, "and fifty per cent of the people up here thought so, too."

A spinster encountered some boys in the old swimming hole, minus everything but nature's garb, and was horrified.

"Isn't it against the law to bathe without suits on, little boys?"

"Yes'm," announced freckled Johnny, "but Jimmy's father is a policeman, so you can come on in."

"How did you screw up your courage to propose to the rich Mrs. McTavish, Sandy?"

"Losh, mon, 'twas jist awful. I'd sworn I'd do it come Monday night, so I took her for a wee ride in a taxicab, and wi' one eye on the waumeter tickin' awa', I had her won at the end o' sixty cents."

One of the leading ministers in town met Mr. Morissey on the street and stopped to speak to him. "I was surprised, but very much pleased," said he, "to see you at prayer-meeting last night."

"Oh," said Morissey in a tone of relief, "so that's where I was!"

Mistress to Her Maid—Bridget, these eggs are as hard as ever; I told you I wanted them soft.

Bridget—And sure, I biled those eggs for five hours and they just won't get soft.

Old Complaint

"Doctor, I'd like a prescription."

"For what?"

"A fishing trip."

AN INCIDENT while in camp near Hunter's did not make me love the Governor's party any the more. Toward evening, an officer came over to our camp fire and the sergeant drove us into a compact group to listen to him.

As he stepped up, I realized, with a tightening of the throat, that it was Fanning. Since I stood close to him, I looked to be instantly denounced as a traitor of extremest taint. Instead he looked at me casually and then passed on. I had no chance to use a mirror, of course, but this gave me an idea of how dirty my face was and how unkempt my appearance. For the first time I was grateful for the circumstances.

"To loyal men," Fanning began, "100 pounds in money and 1000 acres of land will be given to him who brings in Husband, or Hunter, or Howell. To you who stand in danger of your lives, who are proved rebels and whom only the clemency of His Excellency can save, we can

Housewife—We are going to get an electric washer, so we won't need you any more.

Laundress—All right, lady, but an electric washer don't give you no gossip

When you see HANES quality you'll marvel at its low prices

1 HANES Collarettes are cut to size. A 40 suit has a 40 collarette. Won't roll or gap open.

2 HANES Cuffs won't pull off. They snug the wrist. Reinforced on the end to prevent raveling.

3 HANES Elastic Shoulders give with every movement, because they're made with a service-doubling lap seam. Comfortable. Strong.

4 HANES Closed Crotch really stays closed. Crotch can't bind, for HANES is fitted by *trunk* measurement as well as chest.

5 HANES Elastic Ankles never bunch over the shoetops. No ugly pucker showing under socks.

HANES brings you all you could ask in underwear—at dollar-saving prices.

HANES is warm and soft, and smooth. It shields your body from the most penetrating blasts of winter. HANES material is elastic-knit. Lies flat—without the sign of a wrinkle. Can't bind or pull.

There is more wear in HANES too. Guaranteed—every thread, stitch and button. The seams will not rip. The buttons will not come off. And buttonholes won't pull out of shape. It is the attention to such details that makes HANES stand more washings and keep you comfortable longer.

You'll find HANES made in every weight. From sturdy extra-heavy to light weight. Men's union suits priced from $1 to $1.50. Shirts and drawers 75c and 85c a garment. Union suits for boys and children too, 75c to $1. Ask your regular dealer about HANES. If he cannot supply you, write to us today.

P. H. HANES KNITTING CO., Winston-Salem, N. C.

Statistics Have Made Insurance Safe

(continued from page 3)

installment payments, interest earned on them, and the number of deaths which it is known will occur in any year among a group of any size. The Mortality Tables show the deaths in any group of any age. This is a simple illustration, but the principles it displays are used in calculating the premium deposit for every kind of life insurance policy.

One other thing. Because the number of deaths in this group of our thousand men will increase each year for a number of years, it would be natural for the survivors to pay a little more each year. The difficulty about this is that as time passes on and we reach our older years we do not earn as much as when we are young. And so if the premium deposit grew and grew and grew, by the time our older years were reached it might be so large that it would be hard for us to make the payments.

That is common experience in life—the time comes when our earnings fall off. And so, to cure that trouble, the rates fixed by the mathematicians for installment deposits, although the same amount each year, are a little larger in these earlier years than are necessary to cover the deaths, and a little less than will be needed in the older years, when our earnings would be smaller;—the deposits in the later years, with the excess payments of the early years, being exactly enough to meet all claims. Youth is made to bear some of the burdens of age.

Burden Is Distributed

Thus instead of having the installment deposits grow a little larger each year, they are the same amount each year. Such a premium deposit is called a "level premium"—it remains level. This is perfectly fair to old and young, for no man knows whether he will live to old age or go tomorrow. By this arrangement the burden of the families of those who die early is distributed over the whole group, in an equitable manner.

Add to this scientific basis the supervision of the Insurance Departments of the various states, and a statutory limitations in respect to kinds of investments, and you have life insurance an institution that is as solid as the everlasting hills. The reason why life insurance organizations have failed is that they were not scientifically sound—they were not "old line," legal reserve institutions.

You will have heard of two kinds of insurance—"Participating" and "Non-Participating." There are two chief groups of companies—mutual companies and stock companies. The stock companies' premium deposit is smaller than that of the mutual company. And it has stockholders, whose capital stock is one of the strong safeguards of the business.

The different elements that make up the amount of a premium deposit are set at a low figure—high enough for safety, of course, and to take into account the fair dividends which the stockholders have the right to expect, having invested their money in the capital stock, and very often having gone without dividends, in a new company, until the business was well established. And the policyholders receive no dividends—that is what is meant by "Non-Participating."

Safety Isn't Involved

By far the larger amount of life insurance in the United States, however, has been issued by mutual companies, which have no stockholders, and whose dividends are paid to the policyholders. The reason is that the great mutual companies are very old, while most of the stock companies are comparatively young. There are far more stock life insurance companies in the country today than there are mutual.

The question of safety isn't involved at all. A sound stock company is just as safe as a sound mutual company. It's just a difference in practice. The theory of mutual life insurance in those early days was that it was better for the policyholders to pay a little larger amount as an annual deposit than would be required, so that if any great disaster should come these increased receipts would make all safe. But if there was no such disaster or emergency, then the part of the premium deposit that had not been needed would be returned at the end of the year, or at the end of a period of years, to the policyholder. As a matter of fact, these overpayments were almost always a surplus and seldom needed.

In mutual life insurance this surplus is paid back to the policyholders in what are called "Dividends,"—and that is why a mutual company is called a "participating" company. Sometimes an agent will tell you that there will be a "Surplus Award" at the end of the year, or perhaps he will call it a "Dividend."

Return Dividends

The stock company believes that its deposit rate is adequate, and so does not charge an overpayment. On the other hand, if there are savings or profits from the rate which the company charges, the stockholders receive a part of this saving, in the form of dividends.

What are these savings and profits that make up the dividend paid by a mutual company? You will remember that our thousand men agreed that the mathematicians should assume that the interest rate on their deposit would be exactly three per cent—no more, or less. You will remember that the mathematicians were to use a mortality table which said that a fixed number of men would die this year, and next year, and so on,—no more, and no fewer.

They paid in their first year's deposit, which, of course, was far more than enough to cover the year's deaths. At the end of the year, however, it was found that instead of ten men having died and $10,000 having been paid to their widows, only five had died and $5000 had been paid. There was $5000 left from their deposits which wasn't needed after they had put over into next year's funds its portion of the total deposits. What shall they do with it?

The natural thing would be to return it to the depositors—give them a dividend. So, let us lay aside this $5000. And then, at the end of the year, it was found that their deposits had earned four and a half per cent interest. Interest at three per cent was all that was needed, to the exact penny, for their plan to work out. What shall they do with this excess interest? The natural thing would be to return it to the depositors. So, let us add that to the death savings.

Use Portion for Expenses

And then, what we didn't speak of, a portion of each installment was to be used to pay expenses of carrying on this business, and in order that they might be entirely safe they fixed the expense at a little larger amount than would probably be used. Through economical management they didn't use all of this expense portion. What shall they do with the unused part? It would be natural to return it to the depositors. And so we add that to the death savings and to the excess interest.

Perhaps during the year they had sold at a profit some security they had bought—they made a profit. So we add that profit to these other three items. And then we divide it among our depositors, to each according to the amount of his deposit. That is exactly the make-up of the dividend paid by a mutual life insurance company. It isn't like a commercial corporation. A commercial corporation does business for the sake of a profit, and from the profits dividends are paid. Mutual life insurance dividends are chiefly savings, excess interest, and sometimes, profit on the sale of securities.

You are entirely safe with either kind of company, and both the mutual plan and the stock plan have their good points.

Rambles of a Pennsylvania Fruit Grower

Continued from page 9)

and saves practically half the cost of labor. A one-hundred-foot length of hose is used; it takes two men to handle this in the tall sweet clover.

The arsenical spray residue problem presses on these growers. The wiping machines used last year were only twenty-five per cent efficient. A local concern is making a machine for the hydrochloric acid wash. All parts in contact with the acid are made of wood; wooden paddles splash the material on the fruit for twenty seconds, then it passes through clear water and is dried with revolving brushes made of Russian hog hair. This machine has a capacity of 1200 boxes a day and will cost about $800. Heretofore most of the packing has been done in packing houses on the farm. Now the necessity for spray residue treatment may make it more feasible to haul to central packing houses

Average Orchards Not Profitable

There are about 7000 acres of apples in the valley, a loss of over 3000 acres since 1919. The mortality during the next two or three years will be heavy, especially in orchards twenty years or more old. The yield per acre is low, averaging about 255 packed boxes an acre, but sometimes runs to 500 boxes. Under present conditions, orchards that average less than 400 boxes are not likely to be profitable.

The cost of producing a packed box has been figured by local authorities as follows: if the average yield is 255 boxes an acre, $1.28 a box; if 400 boxes an acre, $1.16; if 500 boxes an acre, $.91. The average price received during the last five years was $1.29 a box for Yellow Newtown, $1.65 for Delicious, $1.22 for Spitzenberg and $1.47 for Arkansas Black.

Hood River Valley shipped 4000 cars of apples in 1926. Prices were way below the cost of production. This year the valley has forty-five per cent of a crop, or less than 2000 cars. About seventy-five per cent of the cars belong to the Hood River Apple Growers' Association, which also handles pears and other fruits. The association receives loyal support. Last year it sent a personal representative to English markets, which have long been the chief outlet for Hood River fruit.

Pear Conquers Apple

The best bet in Hood River fruit growing, if apples continue to decline, is the pear. There are over 3000 acres in the valley, and the old orchards have made money. Good bearing pear orchards are valued at $600 to $1000 an acre, while bearing apple orchards go begging at less than half these figures. The Anjou is in greatest favor, though only a moderate bearer. It can be matured on the trees and kept in storage until April, after California and Rogue River Anjous are gone. Hood River cannot compete with Rogue River, however, in the production of the Bosc. Another promising sort is the Comice. Easter is a good pollinator, which is quite essential here. It is not profitable to grow Bartlett for the cannery; Hood River will center its efforts on dessert sorts.

Another good lead is the strawberry for canning. There are 600 acres in the valley, and the acreage is increasing. The Clark, which is supposed to be a seedling of the old Wilson, has long been a favorite, but a heavier producer is needed. The cannery price was eight cents a pound last year. It sometimes runs as high as sixteen cents.

I left Hood River with profound admiration for the courageous way in which these growers are adjusting themselves to very trying and wholly unforeseen circumstances.

The moral of this story you have already guessed. It is this—not to be too cocky in the day of prosperity, for adversity may sneak up on you without warning. This, of course, is sheer plagiarism; Solomon enunciated this truth some thousand years ago, but in much more chaste language.—S. W. Fletcher.

FARMALL Plowing and Belt Work Simply Can't Be Surpassed!

THERE is enthusiasm for the work of the FARMALL wherever this perfected tractor appears. On all crops, on all jobs in field and barnyard, it shows the power farmer *something new in handling and efficiency.*

Plowing is one of its strongest suits. The FARMALL owner goes out to tackle that once-dreaded job with interest and good humor. He has learned that FARMALL and its plow will move handily and rapidly over the fields and leave well-turned furrows behind, in ideal shape for the operations and the crops to follow.

On belt work it is the same. We have dozens of positive letters from owners. D. M. Hastings of Atlanta, Ga., writes, "You deserve a pat on the back for the FARMALL. Please do not thank me for this as it is well deserved." He has used his FARMALL on every kind of work including many belt jobs.

Remember that the Harvester engineers devoted several years to working out this *all-purpose, all-crop, all-year design.* They tried out thoroughly *every* type of design. When FARMALL was *right for all drawbar, belt and power take-off work* they offered it to the farmer. The FARMALL is *the one all-purpose tractor that plants and cultivates, too.* It is the feature of power farming today.

Begin by asking the McCormick-Deering dealer where you can see a FARMALL *on the job*

INTERNATIONAL HARVESTER COMPANY of America (Incorporated)

606 So. Michigan Ave. Chicago, Illinois

93 Branch Houses in the U. S.; the following in Pennsylvania Farmer territory—Elmira, Harrisburg, Philadelphia, Pittsburgh.

. . . And next spring your FARMALL will be all ready to go at the PLANTING and CULTIVATING jobs. It's that kind of a tractor!

Stop Your Baby Chick Losses

Raise 2 pound broilers in 8 weeks—buy or hatch your chicks earlier and get higher prices. You can if you have a Martin.

Mannsville (N.) Hatchery writes—"Raised 97 per cent."
S. J. Quinsford writes—"Had 238 broilers in 8 weeks."
Mrs. W. Loffler writes—"Expect to buy another Martin in the spring."

Brooding chicks in a Martin is safer, easier, surer. Fills itself, oil and wood proof, sanitary, dry, warm, even in zero weather, stove in center, no corners—prevents crowding. Special Cel-O-Glass "Windows" let in the Violet Rays of the sun. Ideally ventilated—no drafts. Floor, just clean and go. Shipped knocked down—easy to put up. Last a lifetime. Write for illustrated folder and price.

Oats, Number 2 white (Philadelphia).....				

Potato Market Continues Weak

Review of the Week Ending November 26

BUTTER — The butter markets were firm thruout the week with a moderate demand. Receipts of fancy fresh butter were rather light. Prices in the eastern markets advanced from 1c to 1½c per pound although prices in Boston continued unchanged throughout the week. Many large buyers are now handling storage butter almost exclusively and this cuts down the outlet for fresh receipts. Dealers have found it undesirable to change back and forth from storage to fresh butter.

EGGS—The New York market was unsettled and some lots did not sell readily. There was, however, a scarcity of really fancy stock and the average price of these better grades was higher. Storage eggs were about steady in price but the demand was somewhat lighter. Nearby white eggs were more plentiful and the market somewhat irregular. Medium sized eggs were dull but the best fancy white eggs held steady in price.

POULTRY—The live poultry market was very unsatisfactory in New York due to the exceptionally heavy supplies. Just previous to the holiday dealers had large supplies on hand and buyers had satisfied their needs. Fancy chickens sold fairly well but there was more interest in turkeys, ducks and geese. Dressed turkeys from Maryland and other nearby states sold at top prices, especially when they were of fancy quality. The bulk of the receipts, however, sold at lower prices. Chickens and fowl were weak.

POTATOES—Potato markets in all sections of the country continued dull and weak with moderate to liberal supplies and a slow demand. Shipping point markets were dull and several reported a weaker tendency. On several days New York reported as high as 265 cars on track and Chicago 246. Philadelphia had 130 cars on track and dealers were unable to clean up from day to day which resulted in accumulations and an unsatisfactory condition. The crop in Pennsylvania is now estimated at 25,056,000 bushels or about 13 per cent heavier than last year. While the quality appears to be somewhat superior to last year's crop it is not as high as normally.

HAY—Receipts of hay were moderate during the week and the market was quiet. Offerings of the best grades were light but medium and lower grades were more than ample for trade needs. Timothy hay was generally dull. Receipts at Philadelphia were comparatively large with the better grades coming mostly from Ohio. The top grades sold fairly well while poorer hay was draggy. Prices were barely steady at New York.

GRAIN—The grain markets were generally steady. More favorable conditions in Argentina tended to weaken the wheat market but this was largely offset by a fair export demand and a good demand for milling wheat in domestic markets. The corn market was firm with light receipts. Oats were in good demand and prices held steady. Rye was slightly weaker while barley prices advanced.

LIVESTOCK—Fed steers and yearlings advanced in Chicago and closed higher than last week. Choice steers brought the highest prices so far this season. Stockers and feeders were firm while bulls were stronger. Vealers closed about 50c higher. Fat lambs advanced while sheep and feeding lambs were steady.

FEEDS—Wheat feeds were stronger and prices advanced and cottonseed meal was higher. Linseed meal was irregular and gluten feed steady. Hominy feed was slightly stronger and alfalfa meal was fractionally higher.

APPLES—Supplies of nearby apples in Philadelphia and New York were moderate. The demand was fair with prices holding generally unchanged. The quality of the offerings in Philadelphia showed some improvement. The holiday did not seem to have any effect on the market. Most of the wind-fall apples from nearby farms have already been marketed.

Feeds (selling prices)—Bran, $41.50@ 42.50; shorts, $42@43; hominy, $47@48; middlings, $47@48; linseed, $56@57; gluten, $47@48; ground oats, $46@47; alfalfa, regular, $40@41.

BALTIMORE PRODUCE

County News and Comment

Carroll County, Md.—Weather has been very favorable for corn husking this fall with the exception of November 8 when it snowed and hailed. Killing frosts did not occur until November and we enjoyed ripe tomatoes from garden and sweet corn from truck patch first week of November.—Farmers have been busy husking and storing corn. The corn crop matured better than was expected however, there is plenty of soft corn. Early-sown wheat is looking good and very late-sown wheat is making favorable growth. Some of the farmers have started their fall plowing. A fair amount of clover seed was made over the county. Labor has been a little more plentiful than usual this fall on the farms since local cement plant and railroad shops have been laying off men. Not much corn is being sold and only price I have heard for new corn was $4.50 per barrel out of field.—H. I. R., Nov. 19.

Lebanon County, Pa.—Members of the Farm Bureau, Potato Growers' Association, Fruit Growers' Association, Lebanon Chamber of Commerce, Pomona Grange, County Bankers' Association and the County Schools met and decided to hold the annual show during the week of December 5-10. County Agent Herger and E. F. McLeod, extension specialist in entomology at State College, report but a slight infestation of the second brood of the codling moth. Our Potato Growers' Association received a car load of seed potatoes from Petrusky, Mich. for distribution among growers to be used in the potato bugs, few grasshoppers, no Japanese beetles and no corn borers this year. Corn about all husked and away. Yield fodder hauled. Corn caught in tropical storm and leveled. Stand of corn was thin. Ears were large and fairly mature. Because of the hot, wet fall all grain fields look good. Barley, sown fields strongly established. All the farms of I. W. Long, deceased, were offered at public sale. One was withdrawn, the other five sold. Mr. Long was the grower of the internationally-famous Long's Champion Yellow dent seed corn in Mr. Long's death the county lost one of its first-rank farmers. The time is at hand when all farm orders are getting busy and also for the smaller farm products shows to start. We were seriously grieved one beautiful Sunday morning, some time ago, to learn thru the ringing of the fire bell and the going on the fire truck that our next-door neighbor's barn was afire. We extended our deepest sympathy. Mr. Jesse Brubaker carried no insurance and lost most of his equipment and all but the corn crop.—H. I. R., Nov. 21.

Mckean County, Pa.—The first part of November was real winter like, snow followed by real cold weather, after this much rainfall. October was fine and farmers got their fall work caught up in good shape for winter. Farmers report small grain yields and the quality of the oats threshed was not up to the average. Apple picking was a short job, few trees seemed to be about the only sister variety to bear and quality not very good. Fall apples were scarce, but with a very good demand for sweet cider at 25c per gallon. Corn was a good crop and farmers having silos are well supplied with feed for their stock. Milk production is good for this time of year with a good market for same. A few auction sales have been held and the prices received were good, especially for cattle. Prices: potatoes, $1.50; eggs, 65c; apples, $2.50.—F. J. H., Nov. 21.

Mifflin County, Pa.—Are having very fine weather, warm and mostly clear for over a week. Had snow and freezing earlier. Farmers are still busy husking corn of which a large amount is soft, not in a good condition to crib. Other Township cow testing is about over. From eleven hundred head 31 were condemned. Farmers are receiving $2.08 for 4 per cent milk. Quite a lot of hogs are fattened. Worth 15c a pound dressed. Some plowing done for spring crops. Pasture is good yet. Market at this time: wheat, $1.25; oats, 45c; corn, old, $1.40; new 90c; potatoes, $1.25; apples, $1; butter, 55c; eggs, 60c.—J. H. E., Nov. 16.

Monroe County, Pa.—Heavy thunder showers, accompanied by winds, passed over the county on the 17th. Rural Life Days are being held this month by the county superintendent, John H. Kunkle. First Town roll call is making progress, 250 members is the goal. Dairy meetings are being held by experts from State College and County Agent R. M. Decker. Game is plentiful. Two bears have been shot. Corn about finished husking. Winter grain is looking good and covers the ground well. Little fall plowing done. Trapping season is on. Turnip crop is large. Corn crop is larger than anticipated. Hay, $1; corn, $1.20; potatoes, $1.50; farmers' butter, 58c; pork, heavy, 16c; light, 18c; creamery butter, 55c; veal, 14c; poultry, 25c; onions, $1.40; lard, 18c; eggs, 60c.—H. S., Nov. 22.

Passaic County, N. J.—The weather for the past month has been about average for the time of year although killing frost held off remarkably well as we did not have any until about the last week in October. Fall plowing is well under way and cover crops which have been sowed, principally rye, look good. The markets are getting smaller and are not quite as good as they were. Carrots are selling fairly with the price 25c a bunch and $1 per bu.; beets about the same as a little less; cabbage about $1 bbl, celery about $1.25 doz. for hearts; apples are in fair demand with good stock selling for 75c per 16-qt. basket. The price of eggs is increasing and the hens of the commercial poultrymen are doing good for this time of year.—N. D., Nov. 19.

Potter County, Pa.—November was ushered in by an electric storm. On the morning of the fourth of November the ground was white with snow. Several inches of snow fell and we saw deer, wild geese and a robin. Snow gone and weather warm. Exhibit of farm products given at county seat in October. Farmers are plowing. Thirteen Potter County farmers belong to the 400 Bushel Club although this was not an ideal season for potatoes. Junior farmers enthusiastic and successful. Good supply of fall pigs reported, price $3. Butter, 50c; chickens, 20@25c, potatoes, $1@1.25; apples, $1.50. —M. C. S., Nov. 12.

The Market Place

By W. R. WHITACRE

Pennsylvania Bureau of Markets

DID you ever stop to think what would happen if there were no cold storage warehouses? Every farmer and consumer in the country would be affected. The cold storage plays a large part in the marketing of farm products, since it is the reservoir into which produce flows in times of heaviest production and from which it is drawn in times of scarcity. It not only affects the farmer who stores his produce but also those who do not. Cold storages have been subject to much criticism and prejudice but it is doubtful if any one thing has done more to stabilize the price of farm products and has been of greater benefit to both producers and consumers.

Keeps Prices Level

Eggs are one of the most important products placed in storage. In times of peak production more eggs are available than could be consumed. If there were no storage at this time prices would be far below the cost of production and while this might seem to be a benefit to the consumer it would not since in the winter there would be barely enough eggs to go around and the price would be beyond the reach of the average buyer. The cold storage helps keep the price at a level which is more nearly satisfactory for both producer and consumer. The same principle applies to butter, apples, celery and other fruits and vegetables. If all the apples were to be dumped on the market at the present time the results would be unsatisfactory and wasteful.

This morning I was talking to G. D. Liles, manager of the Quaker City Cold Storage. He told me that in the modern cold storage houses it is possible to maintain practically any temperature that is desired, and that the failure of products to come out of storage in good condition was due chiefly to their condition when they were first placed in storage. If overripe or diseased fruit is placed in storage the results are bound to be unsatisfactory.

Variety of Products in Storage

He said that running a cold storage profitably was not an easy job. Some years the apple crop will be short and they cannot count on any income from this source. Weather and crop conditions are so variable that it is difficult to plan how much space will be needed. One thing that is helping them is the increase in the practice of freezing fresh fruits and berries with sugar and holding them for jams and ice cream.

It is interesting to know the wide variety of products which are placed in cold storage at varying temperatures. Peanuts and other nuts are kept in cold storage to prevent insect injury and in some cases the cold temperature keeps them from becoming rancid. Candy manufacturers use the storage in many ways while manufacturers of electric storage batteries are numbered among their patrons. It has been found that automobile tires will not deteriorate as rapidly during the summer months if they are kept at special temperatures. Shellac is another product which is held at the desired consistency by the use of cold storage. Meats, poultry, fish and rice are a few more of the products which are kept in cold storage. Research work is being carried on to discover new ways of using the cold storage and new products which may be stored profitably.

The West Viewed From a Car Window

(Continued from page 3)

when it goes on a rampage because of too much rain in the region through which it flows or when it gets too much water from the streams that flow into it and carry nearly all the surplus water from the states between the Appalachian and Rocky Mountains.

From Savanna to St. Paul, a distance of 275 miles, the railroad follows the river. There is very little of special interest from an agricultural standpoint. The scenery is beautiful with the river on the west side and the steep bluffs several hundred feet high to the East. During the early fall darkness sets in several hours before St. Paul, Minn., capital of the state, is reached.

St. Paul and Minneapolis, known as the twin cities, were ten miles apart when they were founded about the middle of the last century. Today they have only an imaginary boundary line as industries have been developed and now cover the entire area between the two cities. These two cities are the distributing centers for the Northwest. St. Paul with its wholesale houses, stockyards and packing center and Minneapolis with its grain elevators, flour mills and lumber.

Good Crop Brings Relief This Year

Minnesota and eastern North Dakota this year harvested the best crops in years. This will do much to bring some relief to the agricultural depression that has prevailed in these states for some years because of poor crops on account of long continued droughts and low prices for grain and livestock. Minnesota has been developed as a great dairy center, has more cooperative creameries than any other state. It has established a splendid reputation for the manufacture of high grade butter that finds a ready market in the large eastern cities. Eastern North Dakota is level and devoted largely to grain farming. In recent years a considerable acreage has been put in alfalfa which has stimulated dairying, sheep and swine production. A large number of feeder cattle were at one time produced in the state but the beef cattle population has been materially reduced in recent years. New herds are now being established because of the improved condition of the cattle market. The farmers of the state would be much better situated if more land were used for grazing beef cattle.

Passes Through "Bad Lands"

The Missouri River divides the western third from the rest of the state. The region between the Missouri River and the Montana line is also known as the dry region of the state and near the western border are the so-called "bad lands."

The bad lands are almost entirely without vegetation of any kind and practically worthless. Huge boulders, rock formations of various shapes which have the appearance of the remains of volcanic disturbances, cover this entire region.

It is practically eight hundred miles across the state of Montana. There are no large cities in the state and the total population is less than one-third that of the city of Philadelphia. The contour ranges from that of the level prairies in the eastern part to the high rocky mountains in the central part to beautifully irrigated valleys in the mountain regions. Beef cattle and sheep are produced and wheat, oats, barley and alfalfa hay are the principal grain and forage crops grown. Mining and lumbering are the two main industries aside from agriculture and livestock raising.

The section from the Rocky Mountains to Spokane, Washington, is interesting because of the beautiful streams and lakes as well as the dense forests on the mountains in western Montana, northern Idaho and eastern Washington.

Trap Tags with wire.

WILLIAM BIVINS
SUMMIT, N. Y.

Copper or aluminum. Name and address on each tag. Prices: 20 tags 80c; 45 tags $1.00; 100 tags $2.00, postpaid. Good for season coming. Order now—don't wait. Bivins, Box 602, Summit, N. Y.

ANOTHER $2200.00 Claim Paid

A check for $2200.00 was recently sent to Wm. H. Wilson, R. 4, Bedford, Pa., whose son, Francis Wilson, met with a fatal automobile accident shortly after renewing his policy. No money can repay the loss of the bereaved family, but the check for $2200.00 from the Federal Life Insurance Company helped take care of the unexpected expense. No one can afford to be without this protection when it can be secured for such an insignificant cost. Only $1.00 per year.

Don't Trust to Luck

Even if you are careful—and most of us are—you must trust your safety to others. Auto drivers—Engineers—even Providence. Just a moment's neglect by them and you may be the victim of a serious or fatal accident.

You cannot afford to trust to luck when only $1.00 yearly will protect you and your family from immediate inconvenience or want thru a serious or fatal accident that may happen to you any day.

Here is what it is worth to you

$5,000.00 For loss of life by wrecking of railroad passenger car, street, elevated or subway car as specified in policy.

$2,000.00 For loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxi-cab or passenger elevator as specified in policy.

$1,000.00 For loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclone, tornado, as specified in policy.

$10.00 Weekly for fifteen weeks for injuries sustained in the above manner as specified in policy.

Competition Menaces Northern Sweet Potato Industry

SWEET potato growers on the Del-Mar-Va Peninsula and New Jersey are facing a tide of southern competition that seriously menaces the future of the business. The huge gain in the carlot movement from Tennessee and North Carolina in the past few years raises an issue that must be met by every grower from Cape Charles to New York.

The movement in the last five years from Tennessee has jumped from 1500 cars to nearly 5000 cars with a market consumption only slightly in excess of that of 1922. Delaware, Maryland, New Jersey and Virginia represent a total annual loss of nearly 1500 cars for the same period.

The group of southern states from the Carolinas south and west to Texas shows a gradual gain of 6300 cars in 1922 to 10,913 carloads in 1926. In the same period, the northeastern group including the Del-Mar-Va Peninsula and New Jersey shows a loss of 1300 cars. Outside of Tennessee the only serious competitor of the northeastern group is the state of North Carolina.

Tennessee enters the carlot market on August 15, just two weeks later than Virginia, and stays in the market until July 15, or one month longer than New Jersey. Her potatoes are on the market 11 months of the year, while Virginia has from August 1 to May 31; Maryland, August 20 to May 21; Delaware, September 15 to May 31, and New Jersey from August 25 to June 15th.

Now, consider the number of cars these states shipped during the winter of 1926-27. Virginia is high for all states with a total of 6501 cars, followed by Tennessee with 4948 cars, Maryland with 2285 cars, Delaware with 1885 cars and New Jersey with 1770 cars. North Carolina has 1662 cars.

Has Long Market Season

During October and November, Maryland and Virginia battle for supremacy in the markets, then Maryland takes the decline to be followed by heavy shipments from Delaware which reaches its peak in December and January. In the meantime New Jersey reaches its peak in October, November and December.

Now, let's take a peek at Tennessee. She starts in with Virginia in September and never reaches the peak until April, May and June. Only in August and November does she drop below 300 cars a month. During her peak month she moves bought a large part of the merchantable crop and have filled their houses in anticipation of higher prices. This means there may be almost a normal volume from that state this year.

Prices this year are averaging 30 cents a bushel under 1926, yet the total movement is about 1000 less than the same date last year. With but one exception prices are now lower than any year since 1920, with prices at their ebb in 1922. Every state of importance shows about the same amount of drop from 1926, yet the prices are lower. Maryland, Georgia and Texas show slight gains in the total carlot movement to date but these are offset by losses in other sections.

The situation now appears like low prices with normal supplies of kiln-dried potatoes for the rest of the season. Disregarding the reports of a larger crop for this season and counting on the marketing of as many potatoes this winter as last year, it means that the trade must take close to 1000 cars more of potatoes than it took last year. With prices on the average 30 cents a bushel under 1926 and consumption running 10 per cent less than one year ago the outlook for the future does not offer much promise to the grower in the way of higher prices. —A. K.

Wrapping sweet potatoes in paper at Swedesboro, N. J. This practice is meeting with favor in the New York market.

I will condition a horse or cow in twelve days. Put flesh on its bones, give it life and vigor. Can add 50 per cent to its value. Satisfaction guaranteed or pay $25. Simply send $1 and receive my method. **P. V. FAUST, BRYN MAWR, PA.**

DAIRY

HOLSTEINS Two registered Holstein bulls ready for service; three choice dam by 30 lb. sire; others dam a big cow testing nearly 30 lbs. Write us your needs. Herd accredited. Blood tested. Satisfaction guaranteed or pay $25. Simply send $1 and receive my method. **P. V. FAUST, BRYN MAWR, PA.**

FREE DOG BOOK—Pratt Miller's famous dog book on diseases of dogs. Instructions on feeding, care and breeding, with symptom chart for prompt treatment. Write for free copy. **Pratt Miller Products Corp., 1025 W. Broad St., Richmond, Va.**

COONHOUND One redbone four year old coon hound, broke to hunt. Request $40 accepted. **L. J. ADAMS, Rumsey, Illinois.**

COONHOUNDS, Combination Hunters, Foxhounds. Champion Rabbit Hounds. Catalogue, photos free. trial. **L. J. ADAMS, Rumsey, Illinois.**

FOXES

REGISTERED Alaskan blue and silver foxes. We start, advise how you. Booklet free. Breeder agents wanted. Give bank references. **Cleary Bros. Fox Farms, Seattle, Wash.**

RABBITS

MAKE BIG PROFITS with Chinchilla Rabbits. Real money makers. Write for facts. **$40 Conrad's Ranch, Denver, Colo.**

GOATS

SPRING or winter freshe grade milkers, $45. Purebred from yearling stock, $75. Bucks, $45. Kids, $15. World's best breeds. **Goldsboro's Goatery, Manheim, Pa.**

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Hospital.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

BULL NOT DOING WELL.—I have a Holstein yearling bull that is not doing well. He eats well, does not seem to be lousy, but is getting quite thin. His legs are stiff and swollen.—G. R., Gallice, Pa. It would be well to give this animal as much variety in the ration as is possible. Use roots, oil meal or bran as well as molasses to increase the appetite. Allow free access to a mixture of four parts steamed bone meal and one part common salt. It might be well to give one tablespoonful of cod liver oil daily for a period of two weeks. Whenever sunshine is available, see that the animal is exposed to direct sunlight.

COW DOES NOT EAT WELL.—I have a cow that had milk fever but has no appetite. I would like to know whether there is something to give this cow to help her appetite.—W. H., Red Lion, Pa. The cow should have access to good grass. Try giving her some grain twice daily. Your veterinarian should be able to give advice as to the necessity for a tonic. It may not be necessary in this case.

PIG SHOWS PARALYSIS.—I have a young Hampshire shoat pig four months old. He drags his hind legs and seems a little stiff on his hind feet when he gets up and walks. His appetite is not as good as it was before he got the above trouble.—H. S., New Florence, Pa. This condition is brought about by a lack of certain necessary food elements. In other words the ration is not properly balanced. Try feeding a ration consisting of 100 pounds corn, 10 to 15 pounds of tankage and 5 pounds each of ground alfalfa and oil meal. If a good forage crop is available the ground alfalfa may be omitted. To secure the most rapid recovery put one tablespoonful of cod liver oil in the feed daily for ten days. The pig should have an opportunity of getting out in the direct sunlight.

Please Mention Pennsylvania Farmer When Writing to Advertisers.

Slightly Used

"We got a new baby at our house."
"Didya turn in the old one?"

"Do you believe in Fate, Pat?"
"Shure, fur what would we be standin' on without thim?"

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 5 cents a word each for one, two or three consecutive weekly insertions. 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising must run here, for if displayed or illustrations used must run in display advertising columns at commercial advertising rate ($3 cents per agate line).

Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry Breeding Stock, Eggs, etc.) not accepted at word rate. Send for special folder.

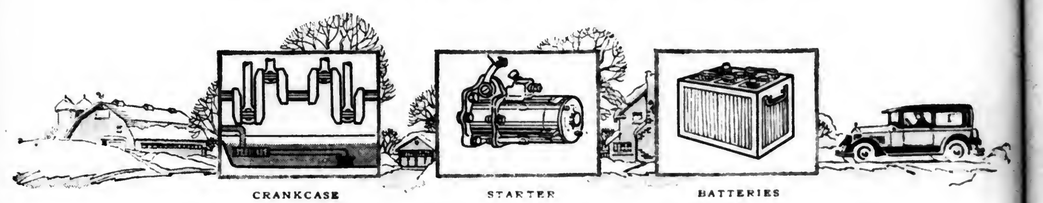
Winter dangers

which may easily cost more than a whole year's supply of oil



EXPERIENCE teaches you that cold-weather operation may be hard on the engine of your automobile or motor truck. Repair expense may pile up.

But do you know the cause of most winter engine troubles? Do you know the remedy?

Poor or incorrect winter oil in your crankcase speeds wear—perhaps 25%.

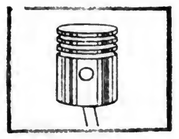
Poor or incorrect winter oil prevents quick engine response to the starter. Your batteries may need recharging frequently.

In winter, due to more frequent use of the choke in starting, extra gasoline slips by your piston rings to dilute your crankcase oil—perhaps as much as a pint in a few difficult starts.

Eight hours of cold weather driving may put a tumblerful of water into your crankcase. How? Water vapor, a product of gasoline combustion, passes the rings and is condensed on the cold walls of your crankcase before your engine becomes heated.

How to avoid winter troubles

Many cars require different oil in winter than they use in summer. The Mobiloil



PISTONS

If your car is not listed above, consult the complete Mobiloil Chart at Mobiloil dealers' for your winter grade of Mobiloil.

Engineers have gone into this perplexing problem from all angles. Through the accuracy of their recommendations and the engineering margin of safety it assures, Mobiloil has become the most popular oil in Canada, Norway, Sweden and other countries where cold is severe.

The engine in your automotive equipment has been analyzed by these experts under all extremes of temperature. The Mobiloil Chart tells you exactly which grade of Mobiloil provides adequate lubrication and brings utmost relief from hard starting, rapid wear and crankcase dilution.

This chart is approved by 609 manufacturers of automobiles, motor trucks, farm tractors and other automotive equipment.

Your nearby Mobiloil dealer has the complete Mobiloil Chart. He will give you a substantial discount on orders for barrels and half-barrels of Mobiloil. He also has the newly-designed 10-gallon drum which may give you a sufficient supply of winter oil for your car, truck or tractor.

When you turn to Mobiloil you do *not* buy a cheap oil. But you do buy the most economical lubrication.

TIGHT BINDING

NEUTRODYNE

The Crosley Bandbox is a Genuine Neutrodyne

Crosley has always given the radio world its biggest value for its dollar. Contemplate the perfection possible when the doors of the research and development laboratories of The Radio Corporation of America, The General Electric Co., The Westinghouse Electric and Manufacturing Co., The American Telephone & Telegraph Co., and the Hazeltine and Latour Corporations were thrown open.

Licensed under their patents!

The Crosley Bandbox is totally and completely shielded. Coils are covered with copper. Condensers are housed in cadmium-plated steel. All wiring is separated and shielded from all other parts of the receiver.

The tuned radio frequency amplification stages have been absolutely balanced through use of the Neutrodyne principal.

The shielding makes the Bandbox highly selective—the circuit makes it acutely sensitive and the design makes it extremely easy to operate.

The Bandbox is operated with a single station selector (one dial).

Far away stations of weak power but perhaps good music are captured by the use of the little auxiliary tuners called "Acuminators." Ordinary one dial radios can never perform like this. Hair line tracking of the condensers together is difficult—but the Acuminators, little secondary adjustments *exclusive* to Crosley give the Bandbox a substantial command of the air and *all* that is in it.

The dial of the Bandbox is illuminated.

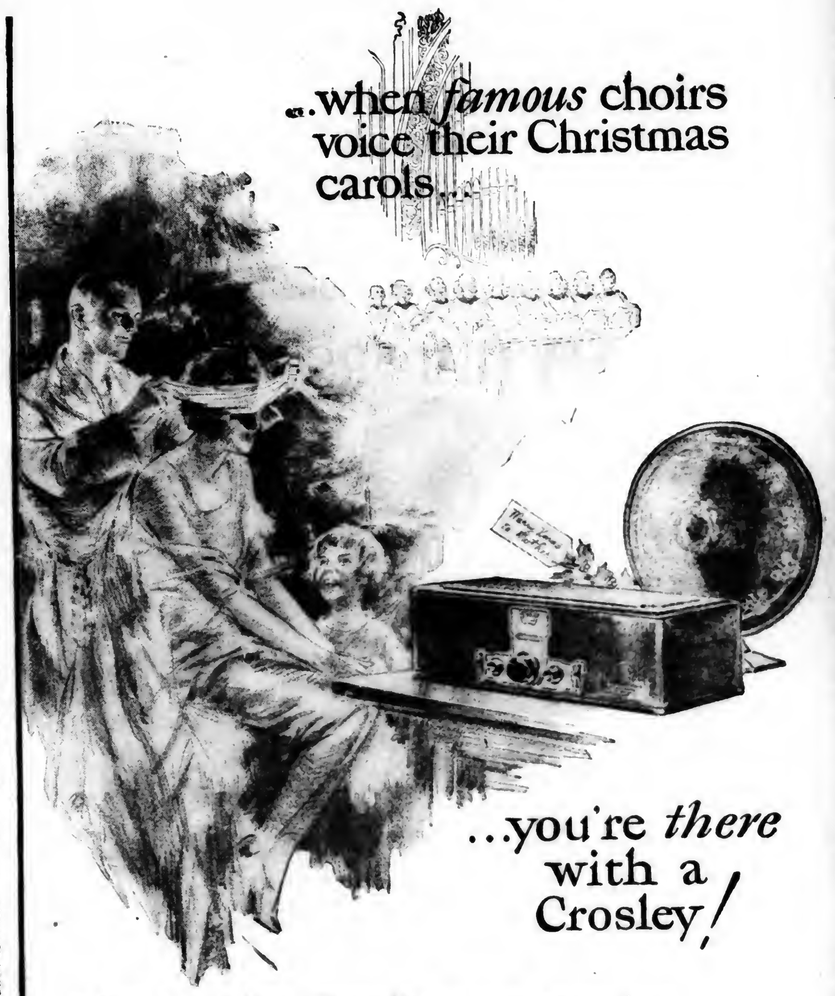
The volume control of the Bandbox cuts the loudest blast down to a veritable whisper.

A single cable leads all outside and power connections from the Bandbox.

The adaptability of the Bandbox to installation in all types of cabinets is a feature. The metal case of the Bandbox lifts *off* the chassis. This leaves the closely grouped dial, switch and volume control shafts to be stuck through holes in the panel of any sort of cabinet. The escutcheon is quickly screwed over them and the console installation is not only complete but has no earmarks of a makeshift.

Prominent furniture manufacturers thru their long experience have produced beautiful cabinets at moderate prices. The celebrated Crosley Musicones are built in. Crosley dealers sell them. Purchasers may know they are best suited for Crosley radio by looking for the "approved label" in each one. Crosley dealers get these cabinets only from The H. T. Roberts Co. located at 1340 S. Michigan Ave., Chicago, Sales representative for The Showers Brothers Co., Bloomington, Ind., and The Wolf Manufacturing Industries, Kokomo, Ind.

An AC Bandbox using ordinary house current electricity for power, sells for $110.



The Crosley Bandbox—a genuine neutrodyne 6 tube receiver $55

Here is the radio that is the tremendous success of 1927. A new circuit, newly designed under the wonderful patents recently available to Crosley, it has won the nation by its amazing performance and unmatchable value. Shielded, balanced, illuminated, highly sensitive and critically selective. It offers you the fun, pleasure and information of *all* the air with all the completeness of radios' development—clear—natural—loud—perfect! Crosley dealers are everywhere. See and hear this marvel at once.

Write Dept. 205. for descriptive literature.

She Built Up a Profitable Business

This Maryland Woman Is a Recognized Authority on the Raising of Turkeys

By R. L. SCHARRING-HAUSEN

WHILE in many sections of the country the business of raising turkeys has been wiped out by disease, it has remained for a former New York City woman, now living on the Eastern Shore, to make an outstanding success of raising the great American holiday bird. Through the use of new methods, including the feeding of cod liver oil in abundance, a minor sideline has been developed into an important business that this year produced a thousand turkeys, many of them weighing 25 pounds as the result of one season's growth.

Fourteen years ago Mr. Harold Baker and his wife, Mrs. Helen Baker, came from New York City to a 400-acre farm near Chestertown, Md., at Quaker Neck on the Chester River. For a time they followed general farming and prospered, but with changing labor conditions and the fall of prices following the war, general farming proved to be no longer profitable.

No Chickens Are Kept on Farm

Mrs. Baker had always kept a small flock of turkeys, which made her money, and it occurred to her that if the turkey business could be conducted on a large scale it would be extremely profitable. With characteristic energy Mrs. Baker set out to learn all she could about raising turkeys. Experiment stations, poultry authorities and practical growers were all sought out for whatever information they could give on the subject. This information, coupled with the application of modern poultry raising methods has not only built up a large and profitable business but made Mrs. Baker a recognized authority on the raising of turkeys as well. A year ago about 400 turkeys were matured on the farm, and this season 1000 have been produced. As an index of her successful methods this flock of 1000 birds has all been produced from 40 hens and four gobblers.

The breeding flock is divided into four pens of ten hens headed by a tom. During the breeding season the males are alternated, which is one secret of fertility. The eggs are incubated in small lamp incubators, the first hatches coming off the last of March. Fertility and hatchability have both been very high, and with poults as well as growing birds the losses have been very slight with very little disease. It is well to notice that no chickens are kept on the farm with the exception of a small flock that is confined, so that the turkeys are raised on clean ground away from common fowls.

This season 1000 turkeys were produced on the farm

The little turkeys are reared in colony houses with coal-burning brooder stoves as is commonly done with chickens. In addition to a grain ration they are fed a moist mash several times a day composed of equal parts of bran, middlings, meat scrap and rolled oats, with one-half part of charcoal. This is moistened with fresh eggs or a combination of cod liver oil and water.

The use of cod liver oil has made Mrs. Baker very enthusiastic, as the properties of the oil in inducing a superior bone growth have enabled the production of immense birds in one season, many of the young toms weighing 25 pounds, with sturdy legs like gas pipes. As there is a strong demand for breeders, birds of such superior scale command a ready sale at a premium.

Area of Farm Decreased to 15 Acres

The adult birds receive a ration including wheat, whole corn and hulled oats, with oyster shell, in addition. Condensed buttermilk is fed to young and old.

It is interesting to note that as the business has expanded the area of the farm has decreased from 400 to 15 acres. The equipment is very simple, consisting of a house for the breeders, the necessary brooder houses and a roofed open shed for the developing birds to roost under. This season the growing flock was divided into two parts of 500 birds each, and each flock was reared on two acres of ground. It is planned to rotate the rearing lots so that the turkeys will be on different (to page 25)

Dairymen Gather At Annual Meeting

Philadelphia Banquet of Inter-State Milk Producers' Association Was Brilliant Affair

MORE than 22,000 dairymen of the Philadelphia milk shed, members of the Inter-State Milk Producers' Association, were represented at the eleventh annual meeting of the organization's stockholders in Philadelphia, November 28 and 29th. Several hundred delegates took part in the business sessions held at the Benjamin Franklin Hotel on Monday. All of the present officers were re-elected and the directors whose terms expired this year also were chosen to serve again.

Cooperation was Keynote of Address

The annual banquet, attended by members and their wives and cooperating city milk dealers, was a brilliant affair. The program included several noteworthy addresses, a series of Rules of Health in tableaux, presented under Dairy Council supervision by students of the Harding Junior High School of Philadelphia, and a Dairy Council salesmanship play entitled, "I'll Tell the World." This sketch written by Happy Goldsmith and presented most ably by members of the Dairy Council staff, depicted the trials and tribulations of the men who deliver bottled milk through dark city streets each morning. It is used in regular Dairy Council work to promote better salesmanship among milk wagon drivers in the city.

"Cooperation was the keynote of the banquet addresses by Dr. Clyde L. King, of the University of Pennsylvania; A. M. Woodward, a Philadelphia milk distributor; Hon. George A. Welsh, member of Congress and of the Philadelphia Board of Education, and Dr. Ralph D. Hetzel, president of the Pennsylvania State College.

Toastmaster Robert F. Bilhorn also introduced Secretary Allen of the World Dairy Congress, who extended an invitation to American dairymen to attend the Congress when it convenes in London, England, on June 26, 1928.

Doctor King, who has made exhaustive studies of economic problems affecting farmers, seemed optimistic about the outlook for eastern agriculture. Competition with the virgin soil, free land and cheap labor of the West is virtually at an end. Farm values in the East, responding to the nearness of good markets and the freight barrier against outside products, are coming back.

Association Worked with Distributors

The Inter-State Milk Producers' Association was highly complimented by Doctor King for its contributions to the cause of better marketing of farm products. He credited the association with approaching the marketing problem from the angle of the buyer. Instead of "lambasting" city distributors to please producers the association has worked with them, cooperating to overcome the difficulties of large scale distribution of a perishable product. He also praised the members for imposing upon themselves stringent rules to improve the quality of their product. They have gone further in this respect than almost any other group of producers.

President Allebach, in his annual address during the first day's meeting, reported that the association has handled during the past fiscal year 743,678,801 pounds of milk, which at the weighted average "B" price had a value of more than twenty-five million dollars, not including premiums paid for special grades.

"The price for basic or fluid milk to our members has remained unchanged at (to page 23)

Seven Factors of Success in Dairying

"FARM profits depend as largely on low costs as on high prices," said a poster shown at the annual meeting of the Inter-State Milk Producers' Association.

Here are the seven factors that make for lower costs, hence larger profits:

1. Balanced feeding.
2. Good cows.
3. Correct size of herd.
4. Effective use of labor.
5. Low overhead.
6. Proper balance between cows and crops.
7. Production planned to market demands.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Agriculture is the most useful, the most independent, and therefore the noblest of employments.—Benjamin Franklin.

Comments on the Week's News

JUDGING by the space given in the newspapers to the current murder trial, and the avidity with which the sordid tale is read, it would seem that the majority of people are more interested in sensational criminality than anything else. If it was found to be in the interest of civilization to make executions private, and if the presentation of criminal scenes are injurious as entertainment, why have we not gone a step farther and prevented the publishing of detailed accounts of murder and other major crimes?

◆ ◆ ◆

The recent meeting of the National Grange at Cleveland, Ohio, was the largest gathering of the kind ever held. About ten thousand members were given the sixth and seventh degrees. The order of Patrons of Husbandry (the Grange) is the oldest national farmers' organization in the country. While it is not primarily either political or business in its purpose, yet the close connection between these interests and the Grange's chief aim—the betterment of social and home life—has made it a power in every phase of agricultural welfare.

◆ ◆ ◆

Those who may be inclined to think that only farmers as a class are and have been making no net profit will be surprised to learn that nearly half the corporations of the country made no net profit during 1925. To be exact, forty-two per cent, or 178,000 firms out of 430,000, had no net earnings at the end of the year. In the five years before the war, seventy-five per cent of all corporations reported no net profit. This is in keeping with what a manufacturer said in a speech the other day, that we are living in "an age of profitless prosperity."

◆ ◆ ◆

The League of Women Voters in some places has been sponsoring public exhibitions and trials of voting machines. The general opinion of those who have attended these demonstrations is that they work, and work correctly. They provide absolute secrecy for the voter, and make it easy to split tickets. Any one who can read, and who has average intelligence, can operate them. The cost of the machines is said to be about $1000 each, but it is claimed that their use would lessen the present election expenses, so that in a few years they would be paid for.

◆ ◆ ◆

A professor of metallurgy in Germany has announced the discovery of a metal alloy which is as light as aluminum and three times as strong as iron. If this material proves to be what is claimed for it, and if it can be manufactured and sold at a reasonable price, there is hardly a limit to its possible use. Already the makers of airplanes are looking towards it as a possible solution to many of their present difficulties. Its use in making hand tools and machinery would relieve mankind from much of its present labor in handling the dead weight of iron and steel implements.

◆ ◆ ◆

Efforts are being exerted to have the Philadelphia metropolitan district enlarged before the taking of the next census. The proposition is to include all within a radius of thirty miles from City Hall. If this is agreed to, it is estimated that the Philadelphia district will show a population of over three million people. The growth of the urban district from Wilmington to New York City during the next half century can hardly be estimated. Already the cities have committees at work on regional planning which, in time, will revolutionize the present facilities for drainage and transportation. The object is by looking ahead to prevent the mistakes which have been made in the past by failure to provide for future growth.

The Growth of Cooperatives

IF THE final solution of the agricultural problem is cooperation, it is going to be a long time before the problem is solved. Altho the state and federal governments have urged and suggested, as well as enacted laws promoting cooperation, the proportion of farmer members out of the total number of farmers is only about one to five in Pennsylvania. Of course, the farmers of the eastern states are in a radically different situation from that of the farmers in other sections. Here, the products are largely of a perishable nature. Here, also, the farmers' markets are close at hand, a large part of the products being taken directly to the consumer and sold by the producer. This situation breeds a spirit of independence so that many farmers do not feel the need of aid in selling their products. The most notable exception to this general rule is the dairy business. The success of these cooperatives, however, but emphasizes the truth of the statement concerning other lines.

Local conditions growing out of the methods of marketing affect the development of cooperative buying organizations. As the markets are close at hand, so also are supply houses. In almost every neighborhood is found one or more firms able, willing and anxious to supply the farmer with his needs. Very often the dealer is a neighbor and a friend, or is connected in some way so that the farmer feels under obligations. Also, when the factors of credit, storage service, etc., are considered the farmer feels he can be better served.

But all this is not sufficient excuse for failure to join in cooperative enterprises. There are a number of things in methods of production, grading and packing, and in efforts to educate the buying public, in arriving at a "gentlemen's agreement" on prices, which are well worth meeting together for mutual understanding. By all means, let the work of cooperative organization go on until the majority of farmers belong to one or more.

Make Safe Investment of Funds

ALWAYS there are some farm people who have some money to invest. It may be from profits made at farming, or from the proceeds of the farm sold in advancing age. How important it is to make a safe investment may be seen from examples of loss from unwise investment to be found in every neighborhood. The editor of this paper knows of such a case just now. A woman in her old age sold her property and invested the proceeds in the stock of some kind of "motor corporation" and finds now that she is without money in what is probably her last illness. She figured that she could live nicely upon the "eight or nine" per cent promised. But she cannot figure out how she can live upon nothing.

The sellers of safe investment securities do not promise large rates and dividends. Honest business does not need to do it. Cautious and worldly-wise people with money are satisfied with four, five or six per cent returns. The local banker can and will always advise what and when to buy for safe investment. Government bonds, Farm Loan bonds, legitimate and well-established bonds are always to be had if those wanting to make safe investment will take the trouble to investigate. The old fashioned gold-brick swindle has practically passed out, but the slick-tongued swindlers persist and have substituted worthless stocks and bonds for the gold brick.

Editorial Sidelights

ON THIS week's cover page we are beginning a pictorial Who's Who of American dairy cattle. Through the courtesy of the various breed associations we have collected a gallery of photographs of a few of the outstanding individuals of each breed. A cover page will be devoted to each of the principal dairy breeds.

Lest we be accused of being biased, we offer this explanation: There is no significance in the order which the breeds are presented, except that the half-tone engraver happened to finish the Guernsey group first.

ONE of the speakers at the annual banquet of the Inter-State Milk Producers' Association suggested that we might soon see national advertising of milk (Page 3). What a field that opens for the exercise of the imagination!

If advertising can do for dairy products what it has done for the oranges and raisins grown by Californians, what a change the milk industry will undergo. Do you recall the time when oranges were a Christmas treat, almost unknown the rest of the year? Now a large part of our population is convinced that it is not an apple, but rather several oranges a day that keep the doctor away.

The first move made by the Californians in their effort to capture the national market was to produce uniform, high quality fruit. That would seem to indicate that dairymen are on the right track when they go to some trouble to improve the quality of their milk.

And speaking of quality, the laws of many states require that all ice cream shall contain eight per cent of butterfat. But can you buy eight per cent ice cream? Possibly, but it is hard to find, for most manufacturers are making 12 per cent ice cream. Why? Because people are willing to pay more and get good cream. They don't want the eight per cent kind at any price.

WILL BE NO UNITY

Farm Organizations Cannot Get Together—Farmers to Have Good Radio—Country Lacks Social Life.

Washington, D. C

THE movement for farm relief legislation has been enlivened by the arrival in Washington of George N. Peek and other representatives of the National Council of Agriculture. They are uncompromisingly in favor of continuing the fight for the McNary-Haugen bill. No proposition will be acceptable to them which does not provide for the equalization fee.

Senator McNary and other members of the farm group in Congress are willing to accept a compromise measure which has some chance of receiving the President's signature. They have gone so far as to draft a composite measure from the many farm relief proposals before Congress last winter. They have taken the McNary-Haugen bill as a basis, leaving out the equalization fee, but with a provision for the buying and selling of farm products by a corporation to be financed from a $250,000,000 government revolving fund. It would do practically what the McNary-Haugen plan is designed to accomplish, the government being responsible for any losses that might be sustained from the operations of the corporation as is the case with the Merchant Fleet Corporation of the United States Shipping Board. But it is plainly evident that any bill which President Coolidge will sign will not meet the approval of the bitter-ender backers of the McNary-Haugen equalization fee bill.

The fact that the National Grange has again declared for the export debenture plan indicates that there will be no unity of action among the farm organization representatives on farm relief legislation this winter.

Would Impose Severe Penalties

The dry forces of the nation are asking Congress for legislation imposing more severe penalties upon violators of the prohibition law. The advocates of law enforcement want the same penalties applied to prohibition violators as are provided for those who break the narcotic laws and other offenders against the Constitution.

Most Radio Stations in U. S.

Three of every five of the 1116 broadcasting stations operating throughout the world are in the United States, says the Department of Commerce. Outside the United States, Canada leads with 59 broadcasting stations.

The Federal Radio Commission is going to see that the farmers have good radio, according to Sam Pickard, member of the commission. The radio service of the Department of Agriculture is a vital adjunct to the farmers' business, most farmers depending upon it for their market reports. The commission is planning to clear 40 channels of interference to protect the interests of the farmers and all rural residents.

Go to Cities for Social Life

Lack of entertainment and social life in the open country is held to be the chief cause for the exodus of farm folks to the cities, according to a committee of experts which has just submitted a report to the Rural Life Bureau, an organization devoted to the advancement of the physical and mental well being of country boys and girls.

The report was based on observations of hundreds of children representing all phases of country life in every section of the country.

Aircraft Operations on Broad Scale

Aircraft operations in the United States are now on a broader scale and more diversified than in any other nation, according to William P. MacCracken, assistant secretary of commerce for aeronautics. Air traffic operations in 1927 show an enormous increase both in number and volume of business. Regular commercial service was inaugurated during the past year over routes totaling 2429 miles, and air transport operators now serve 70 cities over a mileage of 8000. Four air transport operators under contract with the American Railway Express Company now are providing air express service on five routes with an aggregate mileage of 4500 miles. The 24 air mail routes, including several which will be established early in 1928, will serve 66,000,000 people.—E.E.R.

WARNINGS UNIFORM

New Traffic Code Mentions Brakes—Make Arrests for Mixing Storage Eggs—Ship Corn Into Quarantine Area.

Harrisburg, Pa.

IN ADDITION to the new traffic law effective the first of the new year and for which preparations are now being made, State Highway authorities are planning changes in the regulations affecting road contractors where highways are under construction. One of the new regulations will be for uniform methods of giving warning as to sections being graded, where material is piled and where pavement or road bed is being laid. This is the result of a study and it will also require more caution where ditches are open and temporary drainage arranged. As there are scores of highway operations which will be carried over this winter the uniform system of warnings will be important.

Expect Bus Decision

In all probability the appellate courts will soon hand down a decision in the contested bus right cases which have attracted much attention at the Capitol for some time. Whichever way the decision may go it will probably lead to changes in the systems growing up and when the Highway Department gets the buses into a defined method of operating traffic will be facilitated. Incidentally, the new code has much to say about brakes.

Jump Egg Mixers

According to word coming to the State Capitol agents of the Department of Agriculture have called to account merchants in a number of cities and boroughs about the state who were selling cold storage eggs mixed in with the fresh product. This is not a new trick, but apparently a considerable quantity of stored eggs have been getting into trade without being marked "cold storage" as the law requires. In each case the state authorities are insisting upon arrests and fines. Sales of stored eggs as such will be demanded, especially as the season for holiday buying is at hand.

More Studies Started

The whole system of salaries for public service in Pennsylvania has been taken under study by a new State Commission which has just organized here and plans to make a report to the next legislature recommending changes it deems essential. It is not anticipated so much attention will be paid to the state government as that has been pretty well gone over in the last few years. The educational, penal and election affairs of the state are also under study now.

Can Ship in Corn

State officials have found it necessary to call attention to the fact corn may be shipped into the area quarantined for the borer and even within the districts. The fact that it may not be shipped out is so well known that many believed there could be no movement of corn at all except locally. The state is announcing the districts to be covered by the 1928 quarantine and outlining what must be done in the spring. The fact the regulations were so well obeyed has called for comment in other states.

Many Youngsters Listed

Although it is six weeks until the Farm Products Show commences here it is surprising the interest being shown by boys and girls. Many names have been listed as inquiring about the exhibits and the competition. Considerable interest has been aroused in vocational schools as well and they may send delegations.—T.C.

STUDY MARKETING

Market Will Continue—Earning Power Should Be the Basis of Farm Taxation—Certify N. J. Tomato Seed.

Trenton, N. J.

REPRESENTATIVES of the Federated Fruit Growers, Inc., New York City, have been studying conditions in South Jersey relative to the marketing of the sweet potato crop through their nation-wide organization. This is the first attempt of the kind to take up the selling and the distribution of the sweet potato in New Jersey. No information is available at this time whether the deal is likely to materialize or not.

Will Continue Market

The Market Committee of the Atlantic County Board of Agriculture, representing the Hammonton City market, has recommended to the city council that the market be continued during next year. At a cost of only $2100 to the city, a market for a half million dollars' worth of berries had been provided of which sum nearly two-thirds had been applied to permanent improvements. Only $800 is asked for the coming season. H. M. Slack, prominent Hammonton fruit grower, is chairman of the committee.

Taxation Committee Meets

The taxation committee of the State Grange and the New Jersey Farm Bureau at a meeting in Trenton on December 1 took the stand that "earning power should be the basis of all farm taxation." Steps were also taken at this meeting to compile data to present to the State Tax Board in the next two weeks, asking that earning power be established as the basis for all farm taxation. The board hopes to find that the Supreme Court rulings will allow the tax boards to assess valuations upon earning power instead of sales value.—A. K.

Certify Tomato Seed

Certified tomato seed from nearly 600 acres in several southern New Jersey counties will be available this winter, this being the first year that New Jersey tomato seed of such quality has been available from home-grown sources. The largest amount of seed is of the Marglobe variety, with Greater Baltimore, Bonny Best and Columbia also available in quantity. All of the acreage from which this certified seed has been gathered was inspected and passed by officials of the State Department of Agriculture, and represents the finest tomato seed adapted to high production under New Jersey conditions.—W.H.B.

PROTEST TAX

Boston Milk Shortage Advances Milk Price—Makes Study of Farm Taxes—Cabbage Being Held by Growers.

Ithaca, N. Y.

IN THE case of the town of Taylor, Cortland County, before the court of appeals the people win in a protest against a tax of $115.48 a thousand, incurred because of the building of a bridge within the township. The higher court's interpretation of the law fixes the burden of expense for the bridge on the county instead of on the smaller group.

Flood Sends Price of Milk Up

The Dairymen's League is sending four carloads daily into Boston although short of milk in its own territory. Boston lost most of its milk supply when 15,000 dairy cows were lost in the New England flood. Milk has advanced a cent a quart in the Boston market as a result of the shortage. The increase is not expected to last after January 1 and three-fourths of it goes to the producers. Some milk is being secured in Iowa to relieve the shortage.

Farm Taxes Studied

Farm taxes in New York state have more than doubled in the past 15 years according to recent studies made by Prof. M. Slade Kendrick, of Cornell. These taxes have to be paid from farm incomes greatly restricted since the war and through the use of help at greatly increased wages.

Cabbage Price Low

Danish cabbage is being held by many producers as the price offered is but $5 a ton. It is worth more as a feed for dairy cows at the present price of milk.—M. G. F.

THE erection of the simplest kind of building in these days is a really big undertaking. Time was, and not so very long ago, that the construction of outbuildings was a negligible matter. But that was when carpenters worked for $1.50 a ten-hour day, and good lumber could be bought for seven dollars per thousand. We are putting up a much-needed one-story building to serve as a garage, tool house and packing house,—a place where fruit and vegetables may be prepared for market. What we really need is a building about twenty by forty feet, but modern conditions necessitate reducing it to sixteen by twenty-four feet.

◆ ◆ ◆

I OFTEN long for the then unappreciated opportunities we had to get lumber at the old homestead farm. There was a custom saw mill on a tract adjoining our farm. All that was necessary when we wanted lumber was to go to the woods on the farm, cut down some trees and take it to the mill a half-mile away. Often we could haul the lumber home the same day. The charge for sawing was three dollars per thousand feet, or we could give half the lumber if we were short of money. Since we had more timber than money the latter method was usually chosen. Paying fifty to sixty dollars a thousand feet now makes an old-timer flinch.

◆ ◆ ◆

I HAVE often marveled at the nonchalant manner which plumbers have in their innocent attitude towards their work. Going back to the shop two, three, or even five times for some "forgotten" tool or piece of equipment seems to be a part of the day's work. The funny thing about it is that, if two men are doing the work, both have to go every time. What would you think of a man who invariably forgot the cultivator, or the horse, every time he went over to the west field to cultivate corn?

◆ ◆ ◆

WE ARE lining the walls of the poultry house back of the roosts, and the ceiling over the roosts, with a kind of wall board. The "board" is a heavy kind of pasteboard about one-fourth inch thick, and comes in sheets thirty-two to sixty inches wide. While the roof and sides are tight, still one-inch walls are hardly thick enough for zero weather. The lining about the roosting quarters will make a great difference in cold weather. If necessary, a curtain about two feet wide can be attached to the front part of the lining over the roosts to let down and thus form a "bank" of warm air over the hens.

◆ ◆ ◆

WE WANT you to know that we had a real Thanksgiving party and dinner last week. It was conducted in the new home at Neshaminy Gardens. The party consisted of the parent family and its two branches. These six, together with the two boys, made a gathering that was amply able to do justice to the things the women placed upon the table, and that was plenty. Practically everything we had to eat, except the mushrooms and cranberry sauce, was raised on the place. Modesty forbids my saying all that should be said about it. Suffice it to say that we had plenty to feel thankful for.

◆ ◆ ◆

I HAVE just been reading an article descriptive of the first Thanksgiving dinner of the Pilgrims in 1621. The 55 pilgrims entertained 90 Indians three days, feasting and playing games. From a letter is copied the menu of that day: Wild turkey and other fowl, stuffed with beechnuts and chestnuts; cranberries, venison and bear steak, fish from brook and sea, wild celery soup, pumpkins, maple syrup, wild grapes, berries and plums; Indian corn prepared in a dozen ways. The Indians furnished clams, lobsters, eels and oysters "a foot long." The letter telling of the affair written to England finishes thusly: "By the goodness of God, we are so farre from want that we often wish you were partakers of our plentie."

The Cheerful Plowman

Gasoline Plus Alcohol

TEX RICKETT'S dead! I'll say he is! No case of bots or rheumatis could do a surer job! He's just as dead as any wretch whose neck has felt a steady stretch when handled by a mob! You see, Rex drove a peppey car that took him fast, and oft, and far, it was a faithful boat! Yet, Rex insisted—ah, alas—in mixing alcohol with gas; the mixture got his goat!

I gave the lad some sound advice, and tried to be superbly nice when sounding forth my cry: I said, "My lad, some autumn night you'll try to turn off to the right, but turn off left, and die; they'll pick you up a splintered wreck with nineteen fractures in your neck, you'll look like butcher's hash; your car which now is sound and good will then be junk and kindling wood—there'll be one awful splash! Don't mix your gasoline with rye unless you really wish to die, the two can't run a car, the steering wheel gets out of plumb when gas and rye begin to chum, they always fight and jar! You need the gas, that's sure as day, but keep the rye nine miles away when you are in your car, or we'll be singing sacred hymns above your closed and quiet glims; and chanting, 'Cross the Bar'!"

He harkened not, he felt, I think, that I was far too old to drink and drive in spite of booze, but he was young and full of vim, so nothing could befuddle him, he could not try and lose! Well, he is dead, that fact is sure; his gasoline, distilled and pure was mixed with gin and rye; the car went left instead of right at Guffey's corner Monday night, so Rickett had to die!—J. Edw. Tufft.

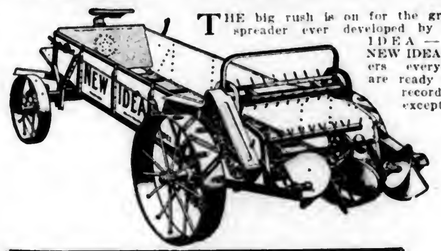
Your NEW IDEA Spreader *is On the Way*



THE big rush is on for the greatest spreader ever developed by NEW IDEA — and NEW IDEA dealers everywhere are ready for a record-breaking business. Carload orders have been the rule—not the exception. In addition to hundreds of individual carload shipments, eighteen solid trainloads of Model 8 NEW IDEA Spreaders were sold and shipped to NEW IDEA dealers in a period of seven months.

Your NEW IDEA is ready. Go see it now. You will find the supreme achievement of the manufacturer who has brought practically every betterment to spreader building since the original invention of the type of spreader which leads the world today.

It's an all-riveted job—built like a bridge. Low-down for easy loading—yet ample clearance permitting perfect operation over high stubble and rough ground. Special steels throughout—balanced, self-aligning roller bearings—always-flexible conveyor chains that will not break, stretch or rust—balloon tire wheels—NEW IDEA excels in scores of vitally important features.

Light-weight—easy loading (less than 40 inches high)—easy hauling—short turning—and unequalled for spreading efficiency. It's a lifetime spreader which you can't wear out if you give it just reasonable care. See it at your dealers today—or write direct for the complete story.

18 Solid Trainloads

Shipped in Seven Months in 1927

Here is a list of the 18 trainload shipments—a record of popularity and demand never before approached in the history of the implement business.

1. Moline, Ill., March 31.
2. Minneapolis, Minn., April 25.
3. Harrisburg, Pa., May 31.
4. Columbus, Ohio, June 10.

FREE TO FARMERS

The Cutaway Harrow Company, Higganum, Connecticut, are sending free to farmers two well-known books, "The Soil & Its Tillage" and the Clark "Cutaway" Catalog of disk harrows and plows. The first book contains much valuable information about modern farming methods; it tells how to get bigger and better crops with less time, labor and money. The Clark "Cutaway" Catalog describes the "Cutaway" line of disk harrows from the Baby Cultipacker and One Horse Harrow to the Double Action Tractor Harrows. It tells about special machines for special work such as the Peach & Bog Plow and Harrow, Orchard Plows, Ringle Action Extension Harrows, Smoothing Harrows, and others. The catalog also explains why disks with edges FORGED sharp, a feature found only on genuine Clark "Cutaway" harrows, STAY sharp and do not crack, heel or chip.

Send for these two books today. A Postal will do. Address The Cutaway Harrow Company, 97 Main Street, Higganum, Conn.

HORTICULTURE

DR. S. W. FLETCHER, Editor
Head of the Department of Horticulture
Pennsylvania State College

Hort Week Attracts Many Visitors

THE fourth annual Horticultural Week at Penn State attracted over 100 visitors to the college for the three days, November 28 to 30th. The most distinctive feature of these meetings is the full opportunity for discussion and for securing the experience of the growers present. Programs were offered in fruit growing, vegetable gardening and ornamental horticulture. Following are some of the points brought out in the fruit program.

The college experimental apple orchard, now twenty years old, illustrates the paramount importance of organic matter in the soil. Twenty years of fertilizing in different ways gave no appreciable response, one way or the other, in a cultivated orchard, but marked differences in yield and growth are now appearing according to the amount of the cover crop plowed under. The primary object of soil management and fertilizing in an orchard should be not so much to feed the trees direct as to build up a large supply of organic matter in the soil.

Mice do not injure trees in an alfalfa sod, not because the mice eat the alfalfa instead of the trees, as sometimes has been stated, but because the alfalfa does not furnish a good cover for them. When the alfalfa gets grassy, mice come in.

Debudding yearling whips, both of apple and peach, at the time of planting in order to secure trees with a strong framework, has passed the experimental stage. Many thousands of trees have been debudded the last three years. Almost invariably these trees are larger than the pruned trees at the age of three years and later, there is much less subsequent pruning to do, and the trees are stronger built for holding future crops. Only one-year whips 5 to 7 feet high should be used and all buds rubbed or cut off at planting except the four or five that are spaced to make the scaffold limbs.

Box Packing More Popular

Box packing is increasing in Pennsylvania. Last year 45,000 boxes of apples were packed in York County alone. The cost of the package, including labor, is five to ten cents a bushel more than for the basket; the selling price may be higher, even for the same grade of fruit. Usually, however, a higher grade of apples is put into boxes than in baskets. Skilled labor is required. This year boxes, complete, cost about 28 cents. An average packer can put up 100 boxes a day. One reason why only five per cent of the apples sold in York are western boxed apples, as compared with 51 per cent in Philadelphia and 25 per cent in Reading, is because the York County growers have met this competition by putting up an attractive and reliable box pack of their own.

The ringing of filler apple trees is safe and practical. Instead of girdling, by taking out a ring of bark, however, which leaves a wound that may not heal, it is sufficient to merely cut through to the wood, circling the trunk, in two parallel rings. This is done in early June or about the close of the period of most rapid growth. Only large and vigorous young trees, five to fifteen years old, which have not come into satisfactory bearing, should be used. At the college girdled Staymans averaged four bushels a tree, and ungirdled trees one bushel, at eight years of age. This offers a means of securing maximum returns from fillers before they need to be removed. The ringing can be done on the same trees every year.

Brush Burner Reduces Labor

"Off years" in varieties like York, Baldwin and Wealthy are due largely to over-bearing and poor nutrition, but the habit may become more or less fixed. By increasing the fertility of the soil, especially by the addition of organic matter and the application of nitrogenous fertilizer, also by open pruning, even alternate-bearing sorts can be made to yield at least part of a crop the off year.

Brush collectors and burners materially reduce the labor of getting the brush out of the orchard. F. S. Reiter, of Allegheny County, secured an old boiler, spread it half open and had a blacksmith weld on two lengths of two-inch pipe for runners, bent up at both ends. The hitch is with a chain 16 feet long. After a fire is started in this it burns brush as fast as two men can pick it up. The cost was $40 and it pays for itself in one season. Other growers prefer to collect the brush with a bull rake, pushed by a tractor, and carry it outside the orchard to burn.

D. M. James, of the State Bureau of Markets, reports that thus far this season the cars of Pennsylvania apples receiving federal and state inspection have been distributed as follows: 1 per cent U. S. fancy; 62 per cent U. S. No. 1; 18 per cent U. S. No. 2, and 14 per cent U. S. commercial. The causes for rejection this year, as off grade, have been, comparatively: worm injury, 31 per cent; poor color, 26 per cent; scab, 15 per cent; mechanical injury, 13 per cent; russeting, 12 per cent, with other minor causes.—S. W. F.

(To be continued)

Rambles of a Pennsylvania Fruit Grower

XXIX.—Puget Sound Berries

By S. W. FLETCHER

AFTER witnessing the painful struggles of eastern raspberries to keep alive under the insidious attacks of mosaic and other degenerative diseases, and the steady decline in the eastern raspberry industry, in spite of the ray of hope in certified plants, it is refreshing to come to a region where raspberries grow with luxuriant abandon. They seem to fairly revel in the joy of living, with no sign of mosaic or other ills. The great canes, ten to twelve feet long, are tied down to wire trellises, in rows of perfect alignment. I am again impressed with the startling truth, which some of my friends back home have not yet discovered, that there are some good things outside of Pennsylvania, after all.

The Puget Sound region of Washington and British Columbia is more nearly like England in climate than any other spot in America. This is another way of saying it is wet. The skies drip tears most of the year, but the summer months are fairly clear. Officially, this region is credited with a rainfall of only forty to fifty inches, about like Pennsylvania, but so much of it is precipitated in a slow, exasperating drizzle that it seems to rain in perpetuity. That is why unregenerate scoffers from east of the Cascades call the local denizens "web-footers," it being assumed that they develop web-feet, like a duck.

The winters are snowless, or practically so. Rarely does the temperature get to zero; usually ten degrees above is the limit. The luxuriance of vegetation and the giant firs developed in this humid and moderate climate are a delight to the eye, unless the eye happens to belong to a man who is trying to clear and subdue the land for cropping. This is not an orchard country. Both trees and fruit are affected with innumerable cankers, rots and anthracnoses, so that spraying has to be continuous. It is, however, a small fruit district, probably the best in America.

The center of the red raspberry industry of the Puget Sound country is the Puyallup Valley. There is heavy planting elsewhere, but the energy and organizing genius of one man, W. H. Paulhamus, put the Puyallup-Summer district in the front. The industry began about thirty years ago. Twenty-five years ago he started the Puyallup-Summer Fruit Growers' Association. At his death, two years ago, it had 1900 members and controlled nearly one hundred per cent of the crop of the valley. The cooperative fell to pieces when the strong man left the helm, but the industry marches on.

There are now over 3000 acres of red raspberries in the valley and 1500 acres of Evergreen blackberries. The soil is alluvial, the deep sandy loams being preferred for red raspberries and the heavier land, verging on muck, for blackberries. Land values are surprisingly high, from $500 to $600 an acre. The best bearing red raspberry fields are priced at $1000 to $1500 an acre, while Evergreen blackberries are $1500 to

Cuthbert red raspberry field in the Puyallup Valley

$2000 an acre. Part of this high valuation is due to proximity to the city of Tacoma, part to the high cost of clearing land, and part, I was assured, to the advantages of living "in this wonderful climate." Most of it, however, is real agricultural value; the land pays good interest on these valuations.

The holdings are small, mostly from five to fifteen acres. Some men are making a fair living on five acres; others are making a better living on ten acres, all in berries. It is intensive, single-crop farming.

The Cuthbert Has No Rival

The Cuthbert red raspberry is grown exclusively; no other has been found that approaches it. It has but one weakness as grown here—it is winter injured occasionally. No spraying is necessary, and there are as yet no diseases to shorten the life of the plantation. Fields that are sixteen years old still yield bountifully, and apparently are good for many years more. The canes, which are half again taller than a man's head, are kept in a narrow hedge row. The trellis has a cross arm twelve to fourteen inches wide, with a wire on each end; the canes are confined within these parallel wires. They are not topped, but are bent over and woven among the wires. No fertilizer is used, but some manure is applied occasionally. A natural winter cover of chickweed, over a foot high, maintains the organic content of the soil.

Yields of two to three tons an acre are expected. Some of the berries are shipped fresh to eastern markets, but most of them are canned. A few are frozen or sugared down in barrels. The price at the factory last year was ten cents a pound. This year the canneries are talking seven cents a pound, which brings loud cries of distress from the growers, who say they cannot produce berries for less than nine cents a pound. According to a survey made by the local Experiment Station, the cost of production is about eight and a half cents a pound.

The Evergreen blackberry, a trailing Evergreen species which is too tender for culture in Pennsylvania, is perfectly at home here. Nothing I have ever seen in berries approaches these Evergreens in luxuriant growth. The thorny canes, eight to fourteen feet long, are trained on trellises like grapes. Most of the growers keep the bearing canes on the upper wire, and the newer canes on the lower wire, to facilitate picking. Thus far the Evergreens have been absolutely free from fungous and insect injury. They are planted in rows seven feet apart, with vines fourteen to eighteen feet apart in the row, and the canes are trained both ways. Apparently there is no limit to the life of the plants; I saw twenty-eight-year-old vines that looked good for another century. Like raspberries, they are not fertilized, except for an occasional manuring.

Picking Goes on for Seven Weeks

Evergreens are picked once a week, but can hang longer if necessary, which is not true of red raspberries or bush blackberries. Pickers get thirty cents a twenty-four-quart crate, with a five-cent bonus if they stay until the end of the picking season. The season is seven weeks, beginning about the first of August. Most of the berries go into gallon cans, out of which come, eventually, blackberry pies. Some are made into soda fountain syrup, and some are sugared down in barrels.

Yields of seven tons an acre are not uncommon. The cannery price last year was five to six cents a pound. Gross sales of $700 to $1000 an acre are not infrequent. I was told by several growers that the cost of production is about sixty dollars a ton, giving a net of $300 to $500 an acre. The Experiment Station, however, giving more attention to the details of overhead, figured a cost of eighty-five dollars a ton. In any case, blackberries are fully as profitable as raspberries.

When the price of Evergreens is six cents or more, it encourages the harvesting of the wild berries which are found in southeastern Washington and Oregon. The wild Evergreens are somewhat inferior to the cultivated, but bring just as much at the cannery. No Loganberries are grown here, but there are a few bush blackberries, chiefly the Snyder.

Since the death of Mr. Paulhamus and the subsequent split of the association, Puyallup berry growers have not acted as a unit in dealing with the market. Now, in addition to the old association, there is "The Washington Berry Growers" and a large group of independents. It is doubtful if this situation is favorable for the industry.

The Puyallup Valley also sends 700 cars of iceberg lettuce to eastern markets. The chief difficulty is a slime rot which takes ten to fifty per cent of the crop some years. As is the case in Oregon, this industry is controlled by Japanese. Bulb growing, especially iris, narcissus and lilies, is making rapid strides. It is a land of intensive, highly capitalized agriculture. Over it broods the snow-capped mountain (which I climbed—in part) serenely indifferent to the squabbles of these poor mortals as to whether it is called Mt. Ranier or Mt. Tacoma.—S. W. Fletcher.

Here's how to get more eggs

DON'T run the risk of having your egg production drop off these two months. Eggs are at their highest prices. Get every possible egg out of your laying flock by feeding Gold Medal Egg Mashes. Don't hesitate about changing feeds now, in mid-season, because your layers will take to Gold Medal Mashes instantly. They'll eat large quantities of them and digest and assimilate every scrap they eat.

That means more eggs. Every poultry raiser who uses these mashes tells the same story—more eggs. And many of them say, *more eggs with less feed!*

Mr. E. D. Fleming of Hopkins, Minn., writes: "After eight days feeding Gold Medal Egg Mash my egg production jumped from 45 to 92 eggs from one pen, which is a remarkable increase."

Mr. L. E. Bastian of Brillion, Wis., writes: "In feeding Gold Medal Egg Mash, I put it in a hopper right next to one containing a mash my hens had been accustomed to eating. To my surprise the hopper with your mash was emptied just as fast as the other. I have always had more or less trouble in switching mashes and I am delighted with the way my hens took to your mash. They eat it right out clean. Instead of the usual decline in changing mashes, my egg production did not drop, but soon showed a gain."

Gold Medal Vitamin Egg Mash and Gold Medal Egg Mash (with Dried Buttermilk) are made scientifically for higher egg production. They are double-tested. They contain exactly the right egg-making ingredients—ingredients that are recommended by the best poultry authorities. They are perfectly balanced and perfectly mixed, and exceptionally palatable.

Try Gold Medal Egg Mashes Now At Our Risk

Above all, remember that Gold Medal Egg Mashes are guaranteed. You run no risk trying them. If any sack does not prove satisfactory in every way, simply return the unused portion to your dealer and he will refund your money. We will repay him. Order from your dealer now and you'll be absolutely sure of getting every last egg out of your flock during December and January.

The reputation of the world's largest millers stands back of Gold Medal Egg Mashes and the Gold Medal Guarantee. You will be taking no chances with these perfect feeds.

GOLD MEDAL FEEDS

"Poultry-Tested"

TIGHT BINDING

We Repeat—It Was 97 Per Cent

I HAVE been urged to write a little more fully on the subject of raising baby chicks than the small space of my Neshaminy Garden notes permits. I cheerfully agreed because what I wrote from time to time seems to have excited some comment. My statement that we raised 97 per cent of 510 chicks purchased seems to have been well salted by some. In fact it came to me that one man who keeps several thousand hens mildly expressed his incredulity by saying that he thought the editor of Pennsylvania Farmer was "a natural-born liar."

But, "Truth crushed to earth shall rise again." We did raise to maturity 97 per cent of our chicks this year. We purchased them from a nearby poultry farm conducted primarily for producing eggs. The owners have been culling and selecting for several years and have developed a flock which is healthy, vigorous and productive. These brothers have demonstrated the possibility of developing a flock free from disease and constitutionally strong.

Three Factors in Success

I stress this fact because, without doubt, it is the first of the three fundamental factors in successful chick raising. No matter how carefully chicks are attended, or what and how they are fed, if they come into the world with the germs of white diarrhea in them, or if they are anemic and lack vigorous appetites, the poultry raiser is doomed to disappointment and loss. I speak from the sad experiences of the past. The other two major factors of success are feed and uniform temperature.

A great many people seem to think they can raise large flocks of incubator chicks by feeding them in the crude way practiced in the days when chicks were hatched and chaperoned by a mother hen. I well remember as a boy seeing my mother and grandmother mix up a little corn meal and water for the newly-hatched chicks. And this was their chief feed until they were big enough to eat cracked corn and wheat screenings. But fortunately the chicks had other feed. The mother hen taught them at once to catch and eat all manner of bugs, insects and creeping things, so that they had what nature intended they should have in the way of nutrition.

But when you put several hundred chicks in a brooder house under a hover, conditions are changed in every respect, and we must be as intelligent at least as an old hen if we are to raise even well-bred chicks. Their feed must contain all the elements needed in the right proportions. Scientists and food experts have studied this question until they now know, and it is possible to buy feeds which produce 100 per cent results so far as nutrition and growth are concerned. So well am I convinced of this fact that I would not attempt to "mix up" a self-conceived ration for starting chicks.

Brooder Must Be Large Enough

Our 510 chicks were hatched May 1 and received their first feed of commercial growing mash on the fourth, having nothing in the meantime but plenty of fresh water. They were brooded by a coal stove brooder which ran like a clock and kept a very even temperature. By the way, when buying a brooder, buy one with just twice the capacity named by the manufacturer. I do not know whether brooder makers expect one-half the chicks to die within the first week or not, but if they do not, a 500-pound chick brooder will be only half big enough within a few days.

Our mortality records showed that sixteen of the chicks had died,—eight by accidents and eight by natural causes,—at the time the cockerels were big enough to send to market. So the figures, in round numbers, show that the loss was three per cent; and figures don't lie!

We gathered our first egg on September 9, or four months and nine days after the chicks were hatched. The number of eggs rapidly increased and in October they showed a twenty-six per cent production. During November they laid 4476 eggs, or 373 dozen. This number from the 239 pullets makes a production of 63.7 per cent for the month.

We Have Placed Our Order

The growing mash was fed until after they attained a ten per cent production, or about two dozen per day. Then a commercial egg-laying mash was gradually substituted. This they have before them in hoppers all the time. In the evening they are given a generous feeding of cracked corn and wheat. They have been confined to the house since the middle of October.

We have already placed our order for our supply of chicks for next spring. I have found that one is much more certain to get the kind and quality wanted if the hatchery people know long in advance just what the demands will be. This gives them opportunity to provide the eggs and manage the incubators so that they can furnish what customers want. Too many people leave ordering until the week before they want the chicks and then expect immediate and satisfactory service.

The excuse, if any be needed, for writing this article arises from the number of questions received relating to the subject, and to my desire to help others by giving as concisely as possible the exact facts.—R. P. Kester.

Harbourton Club Holds Show

THE Community Club of Harbourton, N. J., held its annual show on November 12 at which exhibits of poultry, corn, apples and other products of the farm competed for merchandise prizes offered by local and nearby merchants. Judges were furnished by the State Department of Agriculture. At the conclusion of the meeting a cafeteria supper was served, after which the large crowd present joined in a community sing, followed by addresses by A. C. McLean, county agent, and Mr. Albert Jones, in charge of poultry certification work in the state. A list of winners follows.

Conduct Winter Poultry Lecture Program

THE Hammonton Poultry Raisers' Association, Hammonton, N. J., has started its usual winter program of lectures. The first speaker on the course was Prof. Willard B. Allen, formerly of the New Jersey Experiment Station staff. Professor Allen confined his address to winter flock management. The next speaker will be Elmer Wene, Vineland, the president of the New Jersey Poultry Association, and a member of the State Board of Agriculture. The Hammonton Poultry Association is one of the most active in the state and it took a leading part in making the recent Poultry Convention in Atlantic City such an outstanding success.—A. K.

Pullet Suffered From Tumors

I have a very nice flock of five-month-old White Rock pullets. They seemed to be all right until three or four days ago when I noticed one pullet breathed real hard and every once in a while would make a sound something like choking. I kept her a couple of days but as she grew steadily worse and could not eat I killed and opened to find out if I could what was the matter. She seemed to be full of water. In the water that came out were two yellowish-white chunks as big as a walnut. Her heart was two or three times as large as it should be. Her liver was spotted and had amber colored transparent growths on it. Also found a couple of the yellowish-white chunks around in her body which did not seem to be grown fast anywhere. The rest of my flock seem to be in good health. Do you think there is any danger of the rest of the flock getting this?—Mrs. G. W. A., Potter County, Pa.

I am inclined to think that your pullet was suffering from tumors, which sometimes result from a derangement of the ovaries that develop the egg yolks. This condition might result in dropsy and further internal complications such as the enlargement of the heart and the abnormal growths you discovered. If this was the case, the other pullets would be in no danger. Internal tumors are not uncommon in fowls, and while they in no way endanger other members of the flock cannot be treated in the affected individual. The difficulty in breathing might have been due to the abdominal condition, or the fowl might have contracted bronchitis. I don't think you have any reason to worry unless you notice symptoms of trouble in other birds, in which case I wish you would write me again.—R. L. S.-H.

Hens Eat Decayed Flesh

I would like to know the cause of so many of my chickens dying. Most were old hens, only a few young ones. It seems to come on them all at once; several I found sitting on the roost in the morning with their heads hanging down. They seemed feverish and most of them died in about a day or two.—Mrs. J. H. H., Tidon County, Pa.

I believe your chickens have limberneck, a condition that results from eating decayed flesh. A hen may die in an out-of-the-way place, and the other hens eat the carcass, which causes one or more to die in some odd corner, with the result that other hens eat this one so that the trouble keeps up all summer. If hens are put on restricted range and this is policed for carcasses at frequent intervals the trouble is easily controlled. In case trouble appears, give the flock Epsom salts in the water at the rate of one pound per 100 birds and pour a tablespoonful of the water down the throats of birds that cannot drink.—R. L. S.-H.

Nest Box Notes

I SPENT Thanksgiving day away at an annual family gathering at which the interest centered around a twenty-eight pound turkey with all the other good things that a Jersey farm can provide and the hand of a wonderful cook prepare. At such an occasion one regrets that lack of human capacity prevents the ultimate measure of justice being done to each dish on the table. I could eat only one piece of pumpkin pie and had to pass up the mince entirely.

• • •

Turkeys are scarce and high this year. Local dealers are paying 65c and 70c wholesale for dressed birds. What a profit a farmer could make if he could raise a flock of two hundred twenty-pounders at such prices. The blackhead has put the turkey out of business on most farms, and only a few are raised where years ago every farm had a nice flock. I believe that someone could make money by hatching turkey eggs in incubators, brooding the chicks with colony brooders in partial confinement for several weeks, and rearing them afterward on clean range away from all other poultry.

• • •

I don't recall any time since the war when eggs have been scarcer or much higher than they are right now. We get 64c a dozen, wholesale, at the farm. At that rate a crate of eggs brings $19.20, more than a ton of hay, and it is no trouble to stow a crate of eggs in the back of the buggy or on the seat of the flivver and take them to market; while getting rid of the hay is something else again. A neighbor told me the other day that he had a carload of hay for which he was unable to get a reasonable offer, but anyone who has hen fruit fresh from the egg plant for sale will find a rush to his door once the fact is known.

• • •

Unless a man is getting good production, however, eggs are probably costing him more than the highest price he can get, so high prices don't always mean huge profits. Idle old hens, immature and sick pullets that must be fed that do not produce take care of that. I hear reports of chicken pox and roup from all sides. The pox is especially prevalent, but not so serious a disease as the roup, both diseases make a periodic outbreak about this time, and while it is possible to mitigate their seriousness by good care, they generally run their course of a month or more before the siege is done.

The mother hen taught them to catch and eat all manner of bugs and insects

"You Must Have 'Kerlin-Quality' Leghorns for More Winter Eggs and Larger Profits"

Biggest CASH DISCOUNTS Ever Offered for Orders Placed This Month—Order Chicks Now for February to May Delivery

"I personally believe," says L. J. Matheny, Marion, Ill., "that *'Kerlin-Quality'* S. C. White Leghorns will completely fill the bill for any person interested in large, beautiful hens and heavy layers. If you want more winter eggs and larger profits you must have *'Kerlin-Quality'* Leghorns."

W. W. KERLIN
Owner and Manager
of Kerlin's Grand View Poultry Farm. I personally guarantee your absolute satisfaction.

It Pays to Buy Your Chicks from Kerlin We have been established in the poultry business in the central part of Pennsylvania for 28 years. We are one of the oldest and largest breeding establishments in the country. Our stock has the strong, sturdy mountain vitality that cannot be excelled anywhere. Every year our flocks have been constantly improved; until today *"Kerlin-Quality"* S. C. W. Leghorns—265 to 332 Egg Record Stock—are acknowledged the greatest money-makers in the world. Many customers report flock averages of over 200 eggs per bird per year. This record we have acquired—and we are proud of it—because we have bred and delivered *quality* stock only. *Quality* alone should determine what you buy—and not price. Kerlin Leghorns represent Highest Quality at a mighty fair Price.

None Better in 35 Years
Mrs. Philson Norris, Letart Falls, O., writes: "In my 35 years experience with different breeds of chickens I have never found any that were nearly so good as *'Kerlin-Quality'*. There are none better."

Raised 320 Out of 350—March Hatched
Evidence of vitality and egg breeding of Kerlin chicks is proved by R. E. Schafer, S. Bethlehem, Pa., who says: "Out of the 350 Kerlin chicks received March 9, 1927, we raised 165 pullets and 155 cockerels. On July 5th we got our first egg. By September 1st we were getting 90 eggs a day and since then they have constantly increased. These facts speak plainly that *'Kerlin-Quality'* chicks can't be beat."

Mrs. Norris, home and flock of Kerlin Leghorns

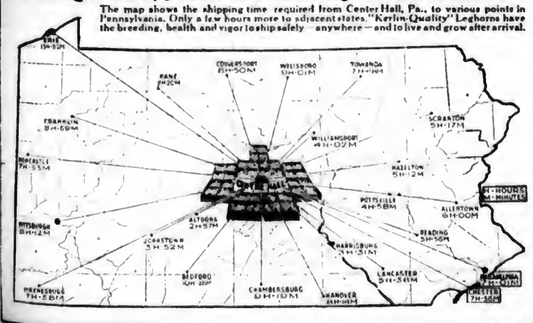
Poultry house and flock of Kerlin Leghorns on farm of R. E. Schafer, S. Bethlehem, Pa.

Strong-Active Hardy Stock *"Kerlin-Quality"* Chicks will develop into big, strong, healthy, active layers—big lopped comb, clear-eyed, wedged-shaped, money-making egg machines. You will get large, chalk white eggs that bring top prices. You can make more money with *"Kerlin-Quality"* Leghorns than you ever made before. Flocks tested for Bacillary White Diarrhea.

Kerlin Leghorns Helped Pay for This Fine Home
"Never before did I have such good success with poultry until I decided to buy *'Kerlin-Quality'* stock," says Mr. Reinhold Marx, Rocky Ridge, Md. "Out of 1,000 chicks I raised 942—500 of which were pullets. The return of eggs is so great that it makes me feel that we want to go into the poultry business on a big scale. Many days I have got as high as 452 eggs a day. The figures show that I made $800.43 net profit from February to July and eggs sold as low as 18c per dozen.
"If it were not for our Kerlin Leghorns, we would not have this fine house to live in which they have helped pay for. Thanks to *'Kerlin-Quality'* Leghorns."

Mr. Marx' fine home that Kerlin Leghorns have helped pay for—and his flock.

Prompt 100% Live Delivery Guaranteed!
The map shows the shipping time required from Center Hall, Pa., to various points in Pennsylvania. Only a few hours more to adjacent states. "Kerlin-Quality" Leghorns have the breeding, health and vigor to ship safely anywhere—and to live and grow after arrival.



Write for Big Free Catalog
Our large four color catalog which is a real history of 28 years' development of the World's Greatest Money-Making White Leghorns is ready for you. Mailed free. Write today. Explains how you can make more money in the chicken business than ever before. Quotes low prices on highest quality baby chicks.

Reduced Prices
This season you can buy Superior matings of "Kerlin-Quality" Leghorn chicks at 12c per chick less than they sold for last year. Take advantage of this big saving now. Order for early delivery—begin taking your profits in five months after getting chicks. Free feed with your chick order.

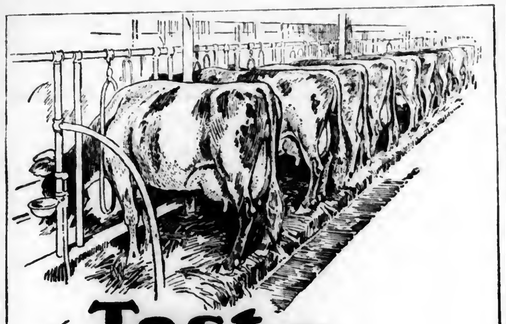
TIGHT BINDING



Test— this winter- feeding program

With freezing weather come special problems in the dairy barn. To keep winter's thieving fingers out of the milk pails your cows demand plenty of the right kind of food. They just as urgently demand that their vigor be built up and maintained so that this rich, dry diet can be completely *assimilated*—turned into milk. Otherwise part of your high-priced winter feeding goes to waste.

This winter join the army of dairymen who are now systematically conditioning their cows to meet the added winter-feeding burdens. Kow-Kare does this job for you surely, conveniently, profitably. This famous concentrated regulator and conditioner has active medicinal ingredients that strengthen and tone up the digestion and assimilation—make the cow responsive to her milk-producing diet.

Sure—and Inexpensive

Kow-Kare is very inexpensive to use. Only a tablespoonful in the feedings one to two weeks each month is required in average cases. A few cents per month per cow is a small price to pay for top-notch milkings and cow health.

Try Kow-Kare one season. Prove for yourself that vigorous cows can produce real milk profits on moderate-priced natural feeds. Kow-Kare is obtainable from nearly all feed stores, general stores and druggists. Large size $1.25; 6 cans $6.25. Small size 65c. Write for free illustrated book, "More Milk from the Cows You Have."

Needed by cows at CALVING

It's good sense—at this most critical time of the whole year — to give needed aid to the cow about to freshen. A small investment in Kow-Kare gets you by many expensive disorders—insures a healthier cow and calf. A tablespoonful in the feedings for three weeks before and after meets average needs.

Banish Cow Ills

Such troubles as Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Lost Appetite, etc., have their origin in weakened digestive and genital organs. Kow-Kare clears up these troubles by helping Nature. Thirty years of successful use is your Kow-Kare guarantee.

Dairy Association Co., Inc.
Lyndonville, Vermont

KOW-KARE

Regulates *and* Conditions

Home-Mix Your Own COMPLETE MINERAL
With Kow-Kare you can easily mix your own complete mineral at a surprisingly low cost—a mixtur of recognized conditioning value. Simply mix 30 lbs. salt, 30 lbs. fine-ground lime, 30 lbs. steamed bone meal and four cans (large) Kow-Kare. For well under $6 per hundred you will have an unbeatable mineral. Use 80 lbs. of this mixture to a ton of grain.

Ability to consume large quantities of roughage; regularity in calving; great production; monthly cash returns—these qualities fit Holsteins profitably into all farm programs.

Western Sullivan County Shows Results

THE Western Sullivan County Cow Testing Association finished its second year August 1, 1927, with 26 whole-year members. There were 350 cows in the association during all or part of the year.

The results for the association for two years are as follows:

Year	Ave. no. cows	Lbs. milk	Lbs. butterfat
1926....	328.85	6249	265.7
1927....	283.82	6754	282.7

The results for the association are as follows:

Average number of cows in the association	283.82
Avge. per cow: Lbs. of milk	6754
Pounds of butterfat	282.7
Percentage of butterfat	4.2
Value of product	$183.82
Cost of pasture	12.38
Cost of roughage	22.69
Cost of grain	44.02
Total cost of feed	79.09
Value of product above feed cost	104.73
Feed cost per 100 lbs. milk	1.17
Returns for $1 expended for feed	2.32
Feed cost per pound of fat	.28

Following is a grouping of cows producing over 300 pounds of butterfat. These cows are grouped as follows: Group 1, above 500 lbs. of butterfat, 3; group 2, between 400-500 lbs., 20; group 3, between 300-400 lbs., 77. Total cows producing over 300 lbs. butterfat, 100.

E. G. Hamill, county agent; Fred H. Ross, cow tester in charge; figures compiled by I. O. Sidelmann.

Eight herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Ave. no. cows	Breed	Lbs. milk	Lbs. butterfat
Arley Day, Forksville	5.25	G. G. G.	8417	467.4
Leon Day, Forksville	8.83	G.G.G.H.G.S.G.H.S.	9915	407.1
Curtis Baumunk, Forksville	11.50	H.A.G.H.G.H.S.G.S.	9240	362.6
Howard Plotts, Forksville	3.20	G. H. G.	7024	358.7
J. L. Fawcett, Campbellville	6.17	H.A.G.H.G.G.G.J.G.S.	9339	356.5
Fred Shaffer, Forksville	11.83	G. H. G. H. S.	7296	343.7
Harry A. Hress, Forksville	18.50	G.H.G.S.G.H.S.	7917	324.3
J. P. Rogers, Forksville	7.50	G. G. G. H.	6428	316.3

Guernsey Breeders of South Jersey Meet

THE unchallenged reputation of Guernsey breeders for hospitality at their gatherings was ably maintained at the dinner given by the South Jersey Guernsey Club, Salem, on November 17, at the Country Club House.

Two hundred and sixteen guests, representing every phase of the industrial and agricultural activities of South Jersey, took part in the festive celebration. The South Jersey Guernsey Club, organized less than ten months ago, took this occasion to celebrate its first year's efforts in boosting better cattle for South Jersey.

The speaker of the evening, Edward C. Cattell, Philadelphia, was a former Salem County boy. He gave the dairymen and others present a vision of life from his rich experience as he has traveled into every civilized country of the world.

Praise Work of Association

Samuel Ridgway, president of the Holstein-Friesian Association, was accorded the honors of the evening and addressed the "Guernsey" guests. He congratulated the rival breed on the progress they had made and expressed his sincere opinion that they had wisely chosen their officers and leaders. E. A. Mercker, of the Bureau of Markets, Trenton, praised the work of the young association. He eulogized the work of William Moulton, secretary of the New Jersey Guernsey Club, by picturing him as the watchdog of the raw milk market.

Charles Cleveland, noted Guernsey breeder from Monmouth County, mentioned four things that went to make for success with Guernsey cattle. These were common business sense, perseverance, the ability to recognize good animals and being unafraid of work.

E. A. Hulbert, assistant director of extension, New Brunswick, made a strong plea for organization among farmers.

Charles Cleveland, representing the state Guernsey Breeders' Association, presented Roy Patrick, secretary of the South Jersey Cattle Club, with a bronze medal watch fob in recognition of his services in advancing the Guernsey breed in the lower part of the state.

Herbert T. Borden, the president, presented William Moulton, New Brunswick, with a gold pencil for his aid in making the club a success, and to Roy Patrick he presented a beautiful pencil for his devotion to the club and the part he played in making the banquet such a royal affair.

Among the achievements of the club this year was a big exhibit at three fairs, winning many notable prizes including a grand championship at the Trenton Fair.—A. K.

Crawford Co. Is Dairy Stronghold

CRAWFORD COUNTY is a real dairy stronghold. Only three counties in the state, Lancaster, Chester and Bradford, can boast of more dairy cows than Crawford. The 34,131 dairy cows in the county according to the 1925 census produced over eighteen and a half million gallons of milk which had a farm value of nearly three million dollars.

Furthermore, Crawford County was the birthplace of the Pennsylvania Dairymen's Association. The original dairy association of the state was organized in 1871 as the Crawford County Dairy Association. In 1874 the name was changed to The Pennsylvania Dairy Association and under various names has continued active to the present time in "advancing the general welfare of the dairy industry" in Pennsylvania.

Linesville Herd High Producers

One of the good herds in this great dairy county is that of N. Partch and Charles Seager at Linesville. The herd stood highest for production a year ago with an average production of 10,658 pounds of milk and 386.1 pounds of butterfat. Laura, one of the grade Holsteins in the herd, produced 53 pounds of milk in one day with her first calf, 63 pounds in a day with her second calf, 73 pounds with her third calf and as high as 83.8 pounds of milk in a day with her fourth calf. The cows are milked but twice daily.

Another good cow, Baldy, gave 14,672 pounds of milk and 461 pounds of butterfat while a third, Smale, yielded 13,486 pounds of milk and 526.5 pounds of butterfat and made a net return above feed cost of $187.42.

The herd is fed a balanced ration. The cow tester's suggestions in feeding have also been a great help. The cows are watered three times each day. This liberal provision for drinking water undoubtedly is a real help in milk production as it is surprising how much water a cow will drink when given frequent access to water.

Considerable amounts of buckwheat middlings were fed in combination with other concentrates as the middlings were comparatively low in price and seemed to produce good results. Each milking from every cow is weighed and this close attention to the daily milk production of each cow has been most helpful in forming a basis for the economical feeding of grain in proportion to milk yield and in keeping a close check on the health of the individual animals in the herd.—A. A. B.

H. E. White Appointed Cape May County Agent

THE New Jersey Agricultural Extension Service announces the appointment of H. E. White as the new county agent for Cape May County.

Mr. White took up his duties as county agent on December 5, with headquarters in Cape May Court House. Mr. White is a graduate of the Massachusetts Agricultural College and has been in active service for about ten years. During the last five years he has been doing agricultural work in China and the Orient, and comes to New Jersey well recommended for the position in Cape May County.

Mr. White was raised on a market garden farm in the Arlington section near Boston where a similar type of farming is carried out as in Cape May County. Both districts cater to nearby city markets that take all of their crops for local consumption.

The Arlington section, on the outskirts of Boston, is considered one of the most famous market garden sections of the United States and the placing of a man in lower New Jersey who understands their methods of farming should be a boon to the state.—A. K.

Was Winner at Memphis

John B. Tilton, Jr., right, who won first place in the milk judging contest at the National Dairy Show at Memphis, Tenn., is shown here with his coach C. B. Davenport. John is a student at the Mount Holly School

Census Interesting

THE census of 1850 showed 61,527 working oxen on farms in Pennsylvania.

There were 1,822,357 sheep in the state at that time as compared to about 500,000 now.

Only 912,600 pounds of tobacco were harvested in 1850. In 1926, 43,560,000 pounds were produced.

Most people will be surprised to learn that the silk industry was of sufficient concern in Pennsylvania in 1850 to be recorded in the census. A total of 285 pounds of silk cocoons were produced by farmers in 19 different counties.

Make 1928 your Best Dairy year

Time, now, for putting your best thought to increasing milk profits in the new year. "Turn over a new leaf," without endangering milk production. Put your herd on the proper Quaker Dairy Ration and reduce your production costs to a minimum. Follow the common-sense advice that says:

"Pick the Feed that Fits Your Farm, Your Herd"

Quaker Boss Dairy Ration is the ideal **24%** grain ration for cows receiving timothy hay, grass hays, straws, corn stover, or poorer grades of clover.

Quaker Big Q Dairy Ration exactly **20%** meets the need of those herds receiving poor alfalfa hay, fair clover hay, or real choice mixed clover and grass hay.

Quaker Dairy Ration has no superior **16%** when cows are receiving choice clover hay, good alfalfa hay, or an excellent grade of fine mixed grass-and-clover hay; a good ration for dry stock and for young growing stock.

Quaker Sugared Schumacher Feed, as the exclusive grain ration, has a real place when the herd is receiving liberal quantities of the very best grade of alfalfa hay. For blending it combines beautifully with any Quaker high protein feed. For all stock—dry stock, horses, sheep, swine and steers—it is unexcelled.

All Quaker Feeds contain molasses in dried form and are rich in the minerals cows must have to make milk.

Send for the FREE book—"The Dairy Herd"—it tells you just how to meet the feed requirements of your farm, your herd.

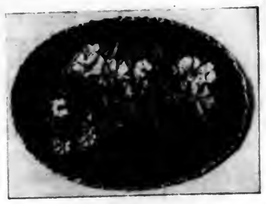
Express Personality in Handiwork

It's Not Necessary to Be an Artist to Paint with Wax or Weave with Rope

Left:—Dark green crepe twist was woven into a charming basket

Right:—A vase decorated with crepe paper and sealing wax

Lower:—A pair of hand made tie-backs is an acceptable gift



CHRISTMAS is fast approaching, and what gift is more precious than one with which loving thought and care have mingled in the making. Even when time is limited, there are many beautiful gifts that can be easily and quickly made.

Weaving with crepe paper rope is a fascinating craft and one that even young boys delight in. Nothing can be nicer than a basket or tray woven with this durable and easily handled material.

If you have never done rope weaving, you perhaps wonder how the baskets take on their great variety of shapes and sizes. The shape of the basket is governed by the foundation wires around which the rope is woven.

Each wire is first wrapped with a narrow strip of crepe paper the same color as the paper rope to be used. The base of any article is always woven first; the number, and length of the wires used when starting the base control the size of the article to be made. An uneven number of wires is necessary for correct weaving so the rope will continually alternate over and under the wires.

Weaving Done with Rope, Not Wire

When starting, the wires are divided into two groups, and crossed at right angles at the center where they are fastened together. The wires are then separated from the center into groups of two, with one single wire, to have an uneven number. The weaving is started at the center and is done with the rope, not with the wires. The wires are bent into any desired shape. There are many different and attractive weaves beside the single and double weave, sometimes more than one or two strands being used at a time, as well as two or more colors.

There is really nothing difficult nor mysterious about rope weaving. It works up very quickly, and most attractive gifts of baskets, trays, lamp shades and other pieces can be made even by the inexperienced.

"Scissor-Painting" Fascinates

The sealing wax craft is equally as delightful and fascinating. The gifts that can be made and decorated with sealing wax are many. One of the greatest joys of this craft is that without being an artist or even having a knowledge of drawing, one can paint beautiful pieces of pottery, vases, plaques and so on. And the secret of being able to do this is the use of designs cut out of decorated crepe paper and pasted to the vase, box or plaque, and then painted over with sealing wax paint using the same colors as in the crepe paper design. This is called "scissor-painting."

The paint is made by breaking a stick of sealing wax into small pieces, covering it with denatured alcohol, and allowing it to stand in a covered container for several hours until dissolved. Raised designs are made by heating the end of a stick of sealing wax over a flame, and dropping the hot wax of the right color on the design. As soon as it has cooled slightly the petal, leaf or other design is shaped with a cool tool.

There are many different ways of covering a surface with sealing wax paint or with hot sealing wax. Painting in the mottled effect, in one color, or shading from dark to light is accomplished merely by holding the brush in a vertical position and applying the paint with a quick up and down motion. Sometimes instead of painting the surface of a vase or similar article with sealing wax paint, it is dotted on from the end of a stick of hot wax, and then held over a flame. The object is slowly revolved, the wax melted, and allowed to run smoothly over the surface to be covered. Two or more colors can be beautifully blended in this way.

The background of the small floral "tie-back" was made by heating the end of the stick of sealing wax and applying the wax to the surface in a circular motion, going around and around in one spot until the wax required reheating.

Such a variety of things can be made with sealing wax that one could make all their gifts without having any two alike. For complete instructions, send for a Christmas booklet, using the coupon below.

Enclosed find 10c for which send me, postpaid, a book of ideas on Christmas decorations, gifts and entertaining.

Send orders to Home Page Editor, Pennsylvania Farmer, 261 So. 3rd St., Philadelphia, Pa.

It is quite as advisable that toys for older children be subject to cleansing, for they are constantly being shared with playmates. Wooden playthings, many of them gaily enameled, are cleaned easily. Here is your choice, for small girls, of doll cribs, gate-leg tables, colonial chairs, and even tiny ice-boxes.

For the boys there are tall wooden sailors, bravely attired in blue paint; giraffes, and wheelbarrows, and iron fire engines that can be scrubbed and polished if they happen to dash through a real mud hole on the way to a make-believe fire.

A toy that endears itself on first glance is a washing set. It consists of a wooden tub, a clothes wringer, clothes line, ironing board, and electric iron, all in minature. Any little girl will clap her hands with joy over such a gift. And it may serve a double purpose. It suggests the idea of a regular wash day, just like mother's, when children wash their own toys.

Lasting Gifts Bring Lasting Joys

IF THERE is a little one in your home or among your friends, do not make the mistake of giving toys at Christmas that will not last even thru the day. Frequently I have gone to see the trees of my many little friends and they have had to apologize for the already broken toys. What a foolish waste!

My own little girl is in her first year of school, and among her most treasured belongings are two little chairs that were left under her tree when she was but a year and a half old. Dozens of friends enjoy them each week, and they are carried by

tiny tots in great glee. They are today as good as new.

On her second birthday, a very generous auntie gave her a willow rocker. To have a chair all her own, and one that rocks like daddy's, brought endless joy. I can suggest no finer gift, and I know a store that offers to our readers a very well made reed chair of strength and beauty at an unusual price. They will ship to you post-paid a chair that has been selling at five dollars, for just four dollars and twenty-five cents. Send your orders to me and I'll do the rest. You may remit by check or money order made out to Pennsylvania Farmer, 261 S. Third St., Philadelphia.—Gertrude S. Stewart.

Soap and Water Enter Toyland

CHRISTMAS time is near, and that brings the planning of gift lists. Of all the lists, the most delightful is that headed "For the Children."

Those who are best informed on the training of children are encouraging a trend toward simple, washable toys. Simple, because a child can use his imagination in playing with them, rather than merely look at them. And washable, for even more obvious reasons. Especially is this true of toys for infants. A toy means little to a baby unless he can get it into or near his mouth.

This brings home the necessity of providing toys and equipment that can be washed with soap and water, for there is no better or cheaper medium of household sanitation.

Dainty celluloid toys for very young children can be thrown right into a tub of warm sudsy water, because the paint used is absolutely fast dye. Floating animals, big colored fishes, pussy cats in pink and blue, and rattles of every design, to say nothing of great bouncing balls,

Attractive Gifts Any Girl Can Make

THERE are many colorful, inexpensive Christmas gifts that club girls can make. They can cover boxes with gaily colored cretonnes, following the instructions given for their sewing boxes, making a collar box for father, a glove box for mother or even a trinket box for sister.

Because felts come in so many pretty colors, it is possible to make bridge table covers with bright felt flowers appliqued with the blanket stitch. The cover itself may be of sateen with a blanket-stitched hem or of black felt with a pinked edge. This same idea may be carried over to the table runner, envelope purse or bag.

Attractive handkerchiefs of the many light-colored voiles decorated with crayons which may be ironed in between two sheets of glazed paper, and the edge finished with a rolled hem and strand floss, make an acceptable gift.

Bureau scarfs that carry out the color scheme in the room for which they are intended might also be made of voile and finished with a wide hem held in place with an uneven basting stitch.

The wrapping on a gift plays an important part in the spirit of the holiday season. A bright red ribbon and a sprig of holly or evergreen do much to make the simplest gift attractive.—Helen Powell.

Anise Cookies Suggest the Long Ago

CHRISTMAS is not Christmas without a jar of anise cakes in the house to serve with tea to callers, or with the occasional Yuletide lunch. They are attractive and festive looking and carry holiday fragrance with them. Best of all, they will keep indefinitely.

4 eggs
1 pound powdered sugar
1 pound flour
Anise oil or anise seed

Beat whites of eggs to a stiff froth. Add the yolks and beat again. Sift in slowly the sugar, beating all the time. Then sift in the flour. The dough must be quite stiff. With your pastry roller, roll out to between one-eighth and one-fourth inch thickness. Then roll again with "springeles eight roll." This rolling pin can be bought at any good hardware store. It contains the pictures peculiar to these Christmas cakes. Now separate the cookies and place on pans that have been oiled with anise oil. Sprinkle slightly with anise seed, and let stand all night. Bake in a very moderate oven.

If you find after a time that the cakes become too hard, you can soften them by placing a wad of wet paper in the lid of your container.

Note.—I find that an apple or two in the cookie jar will prevent hardening.

Sure to Be Appreciated

THE most useful gift that came into our house last year was a toy soldering outfit. The first thing done with it was repairing the milk pail. A tiny leak in the bottom was soldered and the strainer was tightened at one side where it had pulled loose. Then the separator spout was made good as new again.

The youngsters have learned to do a very neat job of this repairing, and are always on the lookout for something that needs mending. In the work done by this little gift, a soldering set pays for itself in a short time. The good it does in training children to habits of thrift cannot be measured. If you want to give a family of children a worth while gift, choose a soldering set.—Mrs. E. M. C., N. Y.

Pressure-toughened Rubber

lets you enjoy their warmth, comfort and protection for extra months

For work or riding in the car, thousands of women choose these 4-buckle Hi-Press gaiters because of their warmth and long life.

Men keep warm and get more "mileage," when they wear 4-buckle Hi-Press gaiters with pressure-toughened soles.

Black ZIPPERS, *fleece-lined, give stylish, practical protection, with the convenience of the genuine* HOOKLESS FASTENER *which glides so easily open or closed. Be sure the name* ZIPPER *is on the pair you buy.*

YOU know how it is with cloth-topped arctics and gaiters—you can wear them just as long as their rubber soles stay good.

So Goodrich starts from the ground up. All the rubber in Hi-Press footwear is *toughened by pressure*—strength and long life are literally *pressed* into the soles.

Then the uppers are built and reinforced to match the extra strength of these remarkable soles.

What is the result? Today it takes more than 50,000 department and footwear stores to supply the demand for Goodrich footwear.

For work or "dress up"—for walking, wading, and all outdoor activities—there is a special type of Goodrich Hi-Press Rubber Footwear which gives longer protection and "long run" savings.

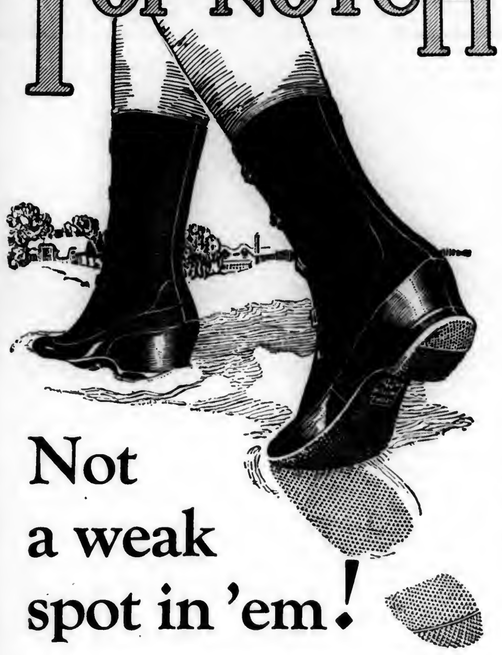
TOP NOTCH



Not a weak spot in 'em!

MOST arctics have a weak spot that breaks through prematurely. They don't deliver your full money's worth.

Usually that weak spot is the heel. But Top Notch Arctics have the patented Top Notch heel construction. This Clincher Cushion heel lasts as long as the sole—*absolutely!* And the sole lasts so long that you wonder how it can do it.

So you will find it an economy to go to the store that sells Top Notch Arctics. The Top Notch line includes cloth-top arctics—arctics of all-rubber from top to toe—heavy and light rubbers. Good-looking and good-fitting as well as long-lasting. Ask for Top Notch by name, and look for the Top Notch Cross.

Warm Clothes Fill Winter's Needs

Let's Begin Now to Think of January's Chill

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5716.—Three sizes: 16, 18 and 20 years. An 18-year size requires 3 yards of 40-inch material with ⅞ yard of contrasting material for sleeve inserts, collar and waist portions. Price 10c.

5204.—Six sizes: 2, 4, 6, 8, 10 and 12 years. A 10-year size requires 2 yards of 54-inch material. Price 10c.

5966.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅝ yards of 40-inch material with 5/8 yard of contrasting material. For collar and cuffs of fur or fur fabric 1¼ yard 12 inches wide is required. Price 10c.

5986.—Five sizes: 2, 3, 4, 5 and 6 years. A 4-year size requires 2¼ yards of 36-inch material. Price 10c.

5971.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 yards of 40-inch material. Price 10c.

5959.—Four sizes: small 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4½ yards of 36-inch material. Price 10c.

5988.—Three sizes: 2, 4 and 6 years. A 4-year size requires 1⅞ yard of 54-inch material. Price 10c.

5972.—Three sizes: 16, 18 and 20 years. An 18-year size requires 1⅞ yard of plain material and 1½ yard of checked, or other contrasting material 40 inches wide. Price 10c.

5979.—Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 2⅝ yards of 40-inch material with ¼ yard of contrasting material. Price 10c.

5881.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4 yards of 40-inch material with ⅝ yard of contrasting material. For collar and cuffs of fur or fur fabric 1¼ yard 12 inches wide is required. Price 10c.

5399.—Five sizes: 6 months, 1, 2, 3 and 4 years. A 2-year size requires 1¼ yard of 54-inch material. Price 10c.

5982.—Four sizes: 4, 6, 8 and 10 years. An 8-year size requires 2½ yards of 36-inch material together with ¼ yard of contrasting material. Price 10c.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Friendly Talks

By Edgar L. Vincent

IT IS not all of growing a beautiful forest to set out the trees. They must be kept trimmed up, the underbrush cut away and at times thinned out to give the best and the finest every possible chance to thrive.

Every farmer who loves his forest, and who has an eye out for the future, when his boys and girls may be the owners of the old farm, is careful never to cut a live, thrifty tree for firewood if he can possibly avoid it. How many times in the early part of the winter we have gone through the woods and "spotted" such trees as were dead or beginning to show by their branches that they were "going back," so when the time came to lay in the winter's supply of firewood we might remove those trees and save those that were still growing for days to come. One of the most important parts of our farm work is that which we bestow on our woodlands; for timber is getting scarce and valuable. Some foresee the day when the lack of timber will be a serious handicap to the peace, prosperity and welfare of our country.

Trimming out the dead and dying!

It Illustrates a Man's Life

What is this but the story of the making of a man's life? Do we have to keep constant watch over ourselves lest things creep into our hearts that only mar and hinder and choke our progress toward a better life? Often our hearts become so grown up with the underbrush of evil that it hinders us from reaching the best there is for us. Habits of pride, habits of selfishness, habits of criticism and unkindness, how they do smother the better side of our nature and hamper us in our efforts to build up a good character!

A farmer I used to know had a terribly warped disposition. It may be he was born that way; I do not know; I sometimes think it is so. And this man was constantly in trouble with his neighbors. Often this led to suits in the court. He not only worried and fretted and scolded himself into a state of unhappiness, but he kept everybody else in hot water, and all over nothing. And he did not live out his days. I have no doubt that he actually shortened his own life by his petulance and his unhappy disposition, and who can tell what an influence for bad he may have exerted upon the lives of others? Other folks let their hearts grow up to brush by their indulgence in habits of a different nature, but no less destructive of growth toward a life of peace and usefulness.

How Can We "Grow in Grace"?

Stop just here and ask how can this be avoided? We can take our axes and go out to the woods and clear away the brush and cut down the decaying trees, but it is an altogether different thing to keep the heartlife clean, pure and sweet. In these days, especially, when it seems as if we have everything to drag us down and so little to help us up, how can we "grow in grace and in the knowledge of the truth"?

This is a serious but not a discouraging proposition. It can be done. Have you not known men that lived away up on the high levels of life, and who nevertheless had all sorts of drawbacks? These men have learned the secret of trimming out the bad, the unsightly and the harmful in their natures. A steady trust in the almighty power which rules the universe; a determination to conquer self and pride and willfulness and a love for one's fellows will do it, and nothing else will. Love for others? Yes, that is a mighty incentive to do right. If we can live right and help the world to be a better place to live in we have served our day and generation nobly and well.

Experience is what you get while you are looking for something else.

LIFT THE LAND-TAX *on Your Farm*

THE worst tax of all taxes, the tax that's never paid, the tax that's levied on productive land by deep-rooted stumps, boulders and submerged rocks. Land of virgin richness is kept out of production by these obstructions. The rest of your farm has to be worked so much harder—often overworked—to make up for this unproductive land. Overworked, worn-out land cuts down the profits on your hard work. Your family, yourself, your farm deserve a better deal.

Lift this land tax! Not a long, tedious, expensive job as it was in your grandfather's time. Now you have an efficient, high-power, economical tool that does the job literally in a twinkling—farm explosives. And you have a practical, experienced helper who has nothing to sell, no axe to grind, and just one purpose—to assist you to get more out of your farm and more out of life—your County Agricultural Agent.

He was selected to do this work by the United States Department of Agriculture, your state Department of Agriculture, and your state Agricultural College. He knows farming as a farmer knows it—right down to earth, plus the best technical knowledge available. He knows what other farmers are doing. His success depends on how much he can advance the prosperity of the farmers in his county. He'll be mighty glad to lend you a hand. He's waiting to help you. Give him a chance.

Write to either your state Agricultural College or your State Department of Agriculture, in case you do not know your County Agricultural Agent.

A copy of the "Farmers' Handbook", a standard farm textbook, is yours for the asking. Use coupon.

Giant Grip
Shoes and Calks
Increase Horse Power

WINTER holds no fear for you if your horses are shod sharp—if they have on Giant Grip shoes and calks. Safe footing and sure tractive power increase their capacity for work. Calks can be changed easily without removing the shoes. Calks are interchangeable in all Giant Grip shoes. Your horses can always be shod sharp. Giant Grip calks *stay in—wear sharp* and *wear longest*. They are your sure protection on icy hills, and your guarantee that your horses will not be working under strain.

Your blacksmith has Giant Grip shoes and calks. Have him put on a set *now* when sure footing is needed most.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Friends:—I live in the country. We have a black dog for a pet. He barks and jumps at anybody if they have a rope and a stick. We call him Tiple. I am eight years old and am in the third grade at school. We have five cats. The woods are all around our farm. I live beside the three bridges. Our pet dog will eat candy. He chases butterflies.—Marjorie Hymer, (X), Bridgeton, N. J.

Dear Forum Friends:—Here's a recipe:

AMERICAN CHOP SUEY

1 pound pork or veal
2 tablespoons of butter
2 sliced onions
2 tablespoons of molasses
Salt and paprika
1 bunch of celery, shredded

Dice meat. Brown in butter, add onions and celery which has been thinly shredded into two-inch strips instead of diced. Cover with cold water and add molasses, salt and paprika. Simmer gently until tender. Serve with boiled rice.—Lillian Mazulla, nine, Schuylkill County, Pa.

Dear Forum Friends:—I know some of the girls that write to the Forum page. How many of you are fond of reading? I am. I read all of the books I can.

I am raising two chickens. They are about half grown. They spend the days out of doors but every night they come to the house for me

AN APT PUPIL
Katherine McAllister, (X), Cumberland County, N. J.

to take them in. I am sending a picture of my uncle's dog and myself.—Katherine McAllister, (X), Cumberland County, N. J.

The chickens must be good friends of yours. I'm sure they appreciate your faithfulness.

THE FORUM EDITOR.

Dear Forum Editor:—I received the pin you sent me and thank you very much for it. I am sending you a candy recipe that I use very much. When we have a party at school I make this kind of candy.

ICE CREAM CANDY

2 cups of sugar
½ cup vinegar
½ cup water
Butter size of an egg

Boil until brittle. Pour into buttered pan and when cool enough to handle, pull until white and cut into small pieces and wrap in little pieces of paper.—Margaret Blossom, thirteen, (X), Luzerne County, Pa.

Dear Forum Friends:—I live on a 115-acre farm. We raise chickens and I help to feed them. I have a garden every summer and raise vegetables. This year I raised carrots and pop corn. I harvested about 75 ears of pop corn and quite a few carrots.

I go to Farnum school.—James Niles Walton, Burlington County, N. J.

You were kept rather busy this summer, weren't you, James?

THE FORUM EDITOR.

Treasure Hunt Prize Winners

Group One—Over Twelve
1. Edwin L. Singley, Schuylkill County, Pa.
2. Elsie Springer, Dauphin County, Pa.
3. Mary Ellen Palmer, Franklin County, Pa.

Group Two—Twelve and Under
1. Eleanore Frel, Bucks County, Pa.
2. Orpha Frantz, Berks County, Pa.
3. Robert S. Michael, Erie County, Pa.

Dear Forum Editor:—Thank you very much for the membership pin you sent me. I think it is very nice. I wanted to write long before this but I have been so busy I didn't have time. Here are some riddles:

1. Why is a telegraph pole like a mayor?
2. Which are the most annoying letters in the alphabet?
3. What walks with its head downward?
4. What is better than money?
5. What is bookkeeping?—Pearl Ruhl, (X), Clinton Co., Pa.

Dear Forum Editor:—All the leaves are turning brown in the woods. It is beautiful to see the leaves of so many different colors on the trees. We have a great big Japanese walnut tree by our house. It always had a lot of nuts on it but this year it has very few. They are very rich nuts and are good to put in candy and cake.

Our apples are about ripe, too. We have apples ripe in summer and in winter.—Elizabeth Walker, Ulster County, N. Y.

Dear Forum Editor and Friends:—I live in the country where you can have lots of fun. I would like to be a Forum member. Do any of you like to write poems? I do and here is one of mine for you.

THE LITTLE RAIN DROPS

Oh! you pretty little rain drops,
Oh! I love to see you play
As you sail
Down my windowpane.
Pit! pat! pitter, patter!
Down the window pane.
Oh! is that the way you play
All this lonesome day?—Pauline Hausman, (X), Lehigh County, Pa.

Dear Forum Friends:—I am sending a cake recipe.

2 cups flour
2 teaspoons baking powder
½ cup shortening
1¼ cup sugar
½ cup milk
1 teaspoon vanilla extract
3 eggs
½ cup fresh grated cocoanut

Sift flour and baking powder three times; beat shortening and sugar to a cream; add milk and vanilla, then flour a little at a time; beat until smooth; add eggs one at a time, stirring and beating batter well after each egg is added. Bake in greased loaf pan in moderate oven one hour. Cover with boiled icing.—Helen, Somerset County, Pa.

I'd like to know your last name, Helen. There's a membership pin on my desk waiting to be forwarded to you.

THE FORUM EDITOR.

THE TWINS AND THEIR MOTHER
Harold H. Weaver, (X), Lehigh Co. Pa.

Dear Forum Friends:—We get Pennsylvania Farmer and I can hardly wait till brother brings it home. I enjoy reading the Young People's Forum and thought I would write a few lines to help fill up the page. I seldom see any letters from Franklin County. Wake up, boys and girls of Franklin County, and write or send pictures to the Forum.

I am in the eighth grade at school. I wonder what some of the Forum friends think about country life? For pets I have a little hen which I call Maggie. She is a little gray hen and lays an egg every other day. My little sister has a pet rabbit.—Mary M. Evan, Franklin County, Pa.

DEAR LITTLE FOLKS:—When I open my mail each week I am glad to find answers from Little Folks who have been solving the puzzles but who have just begun to send them in, and it is good, too, to find answers from many well-known friends. This puzzle block below contains a sentence which I think you all believe to be true. You start the sentence with the letter "O" on the third line—the one with the big "O" around it. Follow the letters along, moving up or down, right or left, but never diagonally. When you have found this sentence, let me have your answer either on a post card or in a letter, so that it reaches me by December 15th. Please tell me your name, your post office address, the name of your county, your age and when your birthday comes. The prizes go to the ten Little Folks, sending in the correct answer, whose letters or postcards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The puzzle in the issue of November 19 said that the Wise Old Owl that looks on at our doings in this corner knew what you'd be thinking about on Thursday. And many of you were thinking about it on the Thursday he had in mind—Thanksgiving Day. The pieces in the puzzle when cut out and put together gave the answer: A TURKEY.

The prize winners are? Mildred Dietz, age 9, Clarion, Pa.; Elizabeth Keener, age 12, Lancaster, Pa.; Minnie Kramer, age 9, Allentown, N. J.; John Boarth Miller, age 9, Ocean View, N. J.; Raymond Mertis Miller, age 8, New Holland, Pa.; Albert Murphy, age 8, Blackwood, N. J.; Albert Panichello, age 9, Vineland, N. J.; Evelyn L. Picht, age 11, Bethlehem, Pa.; Arlene Quay, age 10, Townville, Pa.; Charles White, age 7, Punxsutawney, Pa.

		R	E	

Sally, our pet pig. She helps me hunt eggs. When the nests are high up she lets me stand on her back.—Elizabeth Smith, (X), Warren County, N. J.

Dear Forum Editor:—I will now try to do a little of my part as a member. I haven't been in many contests yet, have I? I have been pretty busy with school work. I love contests. I also like the drawing contests. Christmas is not far off, is it? I hope Santa is good to all of us.

I haven't told you about my pets, have I? I have a dog named Ted. He is a pug dog and follows me everywhere I go. I have a large cat and a horse named Mert. The cat's name is Moses. I also have a lot of bantams.—Beaulah M. Ayres, (X), York County, Pa.

I'm glad you enjoy the contests. Sometime soon we'll have a drawing contest.

THE FORUM EDITOR.

Dear Forum Editor:—As I have long wished to write a letter to you and the dear Forum friends, I thought I would write now. I am a sophomore in the Elizabethtown High School. I like school very much. I am taking five subjects.

I live on a farm. I love to live in the country. This week we have Institute. The Girls' Glee Club of the high school was asked to sing. I belong to it.

Good-bye. I hope that Lancaster County folks won't forget to write more letters to the Young People's Forum.—Verna Mae Brandt, (X), Lancaster County, Pa.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

THAT night was a torment; but only the first of a series of days like it. We could not sleep, but stood together and dozed off standing. Morning brought warmer weather, but with a swarm of mosquitoes and flies. We marched in a drizzle most of that day, up to our ankles in mud. The whole army, save for a small guard, marched ahead of us and had churned up the road into a sticky pudding by the time we came along.

I remember passing through a little crossroads hamlet that day. Two houses and a store were all the buildings it could boast. As we came past, however, from one house, two little girls, about five and six, came out and ventured close up to the roadside and stared at us in childish horror and compassion as we went by. For some reason the incident made me feel more keenly than before the hopelessness of my situation. Just so had I stood as a boy in Philadelphia to watch famous criminals led past to prison.

The rains continued as we marched on. With them, the difficulty of marching and the discomfort of the camps increased. Added to this was the fact that our rations were getting near the vanishing point. The soldiers grumbled steadily and the quartermaster gave us only stuff so poor that the soldiers would balk at it. As the days went on, as the men grew more and more hungry, this came to be less and less. I was sometimes guilty of wishing that my uncle might drive a lot of good bullocks into the lines and let Tryon's army have their fill if only at the same time I could get my teeth in a good stew.

Our number had increased as we went on till now we numbered about forty. I was tied to a poor fellow, named Creson. He spent his time bewailing his fate to the guards and maintaining that His excellency had never had a better friend. Of course, for all I know, he may have told the truth and indeed we had in our party a number of men who had never taken up arms or sided definitely with the Regulators. Since the governor had failed to take any of our leaders, perhaps he felt he had to make a showing and took these harmless fellows to swell the number of the train of prisoners that testified to his military prowess.

It surprised me to see how we managed to live on. One man coughed himself weak and fell by the road one day and would not get up. What happened to him I do not know, but they cut him loose finally, and drove the rest of us on. Most of us were feverish, of course, and I had, after the first two days, a throat so sore I could hardly manage to talk. Yet, somehow, we managed to keep going and despite wet beds, scant food and the plague of mosquitoes, bade fair, as one of the guards said, to keep from cheating the gallows by dying too soon.

This part of the journey seems like a bad dream to me, and it is hard to keep the days separate. So I cannot tell exactly what day it was, although it was some time after leaving Hunter's that we saw the troops form into a hollow square and heard the yells of some poor wretch as the whip was laid on. Someone told me afterward that the man's name was Johnson and that his offense consisted of having written an insolent letter to the Governor's lady. He was given lashes enough almost to pay for a murder. The sentence was upwards of three hundred, I think.

All this time I had plenty of opportunity to think over my own affairs. As one who had already offended Fanning and who had joined with the "Black Boys"—although this I was not sure had been found out—my chances did not look very bright. I was encouraged by only one thing. Fanning had looked me in the face and had not known me. Perhaps I might be able to pass as a simple and curious youth who had the misfortune to be picked up on the battlefield. It occurred to me that I ought to select a false name and give a false history, but because of the exhaustion and the misery that made consecutive thought difficult, I never got that far in my plans.

There were plenty of times on that march when it seemed to matter little what fate the trial might bring. Every day or two we heard we were starting for Hillsboro and every day we marched farther away from it. We began to think that we were doomed to travel forever in Tryon's train, and I had feverish visions of a line of human skeletons, chained together, staggering at the tail of an army that marched on forever.

TWO weeks after the battle, if not skeletons, we did look the part of scarecrows. Few of us had been well equipped to start with. Days of exposure before the battle had weakened seams; the rains and marches since the fight wore moccasins right through and wrought havoc with poor boots. How good boots fared we did not know, for the soldiers took an inventory of us the second day and took for themselves the sound footwear in the company. Those who were robbed thereafter went barefoot. Fortunately my boots were in bad enough shape that they were no temptation and I had some protection from the stones of the road, although mud and water leaked in readily through the split sides. On clothes we fared almost as poorly, since the soldiers considered small clothes and shirt enough clothing for any prisoner and our outer clothing went speedily to keep our guards warm. Since I was younger than most and smaller, my jacket could not be made to fit any of them and I was allowed to keep it.

Rations had been getting smaller and smaller, until one morning breakfast for the prisoners was omitted entirely. As we started out, however, there came a cheer from the column and from the talking and laughing, good word of some sort was being passed back. Even the guards waxed more jovial.

"We're bound for the Dutch fort, boys," one of them called to us. "Now we'll get enough to eat and drink."

We were indeed headed for Betharaba. We learned during the day that the governor had decided to stay there for several days, give the oath to Regulators, rest and refit the troops, hold a review to impress the countryside, and after gathering up arms and prisoners turn back to Hillsboro. He had put out several days before a proclamation offering pardon to all Regulators, save named outlaws, who would take the oath and deliver up their arms. This had to be done by July 10th. Prisoners were exempted from this offer, of course, and in reading the proclamation, I found I was doubly exempted. Those who had destroyed General Waddell's powder were listed with the outlaws.

I REMEMBER how we went trudging along that day in a road beaten to the consistency of paste, a chill wind blowing through thin shirts, and the coughs of the sick making a drum beat to keep step by. Betharaba meant nothing to me, save that it was a place where I had narrowly escaped hanging and to balance that had begun to endure the worst of my troubles.

Toward evening we marched in from the southeast. The place looked strange to me by daylight. The buildings were neat, the houses well kept, and the fields looked prosperous, something like the fields on Sandy Creek before Tryon went through. The Moravian brothers, very sober-faced Germans, were out in a body to watch us come in. As soon as we halted, they bustled around among the troops, to indicate where the best camping places were and to find how many there were to feed.

There were compassionate looks turned at us, but no one came near for some time. Then my comrade in misery, Creson, at sight of a Moravian talking to an officer some paces away, broke into a pitiable cry.

"Brother Marshall, Brother Marshall—help, help!"

The Moravian turned briskly and came towards us. I recognized him for the man with the magisterial air who had saved me from death at the hands of Fanning's ruffians. Now he looked not altogether pleased.

"Abraham Creson, I see," he said quite formally. "Well, we have not been too good friends in the past—" here he gave me a look over his shoulder at the officers—"but if a clean shirt, a pair of stockings may help—"

"Get me free, Brother Marshall, get me free," Creson begged. The fellow was groveling. "These brutes will kill me. You have influence with the Governor. You know what a loyal subject I've always been. Tell him, Brother Marshall—"

"We have no such influence as you think," Brother Loesch declared with cold hauteur. "Go, your neighbors to testify for you."

The officers, chuckling a little among themselves, had turned away. Marshall was following when he caught my eye. He came back and looked me over again. I suppose, because of my youth and size I stood out in that crowd of men.

"I HAVE seen you before," he declared. "Where—"

"At the tavern—I was being taken a prisoner to Fanning," I told him. "I have you to thank for keeping those scoundrels from putting a rope around my neck."

"Hm," he mused as if to himself, "that would have been bad—we want no violence in our colony." Then in a louder voice, he added, "You speak English well, of course. You are young and active. Your name?"

I told him, and cursed myself for a fool the minute after, since it had been my plan to give a false name when I was asked next. It seemed to have meant nothing to Brother Marshall, however, for he said no more but turned sharply and walked away toward the houses of the town.

We were stationed down in a little level meadow close by a stream, a spot where the Moravians evidently pastured their stock and cut some hay. It was a pleasant spot, though a little damp, and we felt a little more cheerful when we saw big quarters of beef being brought out to the men and loaves of bread coming in cartloads. We began to speculate cheerfully on the chances for a real meal.

Suddenly Creson looked up at the sky and began to moan again.

"I felt a drop on my hand," he cried. "It's going to storm again, we won't get a bite; they won't give us a fire. We'll die. I tell you I can't stand this."

Someone kicked him into silence, but he was right about the storm. It came on in slanting sheets of rain that wet us through again in a second. All over the field men were running for cover, struggling with tents, covering over food and ammunition.

"It'll take 'em an hour to get squared away," prophesied Pugh. "By that time, they won't bother to give us anything tonight. We might as well get ready to shiver and starve till morning."

A guard, with a Moravian in tow, came hurrying over to me through the rain. The militia man was talking irritably to the German as he came. I guessed the accent was a bit too much for him. They came up close to the mass of prisoners.

"What was his name?" the guard asked again.

"Craik," the Moravian repeated. "Craik—einer yunger. There."

He pointed his finger straight at me. The guard cut me loose from Creson, and pulled me from the crowd.

"You go with Dutchie, here," he ordered. And to the Moravian: "Don't lose him, or I'll put you in the chain gang in his place."

The Moravian beckoned and led on. I followed with as brave a front as I could muster. Had Marshall reported me to Fanning? Was a special court ready to sit on my case? How near was the hangman's rope?

I thought of these things and wished for good clothes and a full stomach. Bravery, particularly in the face of dangers like these, came hard to a man in rags, who had no food to speak of for a day, and who had just finished a long march. Yet I stiffened my shoulders as best I could and hoped to front Fanning as boldly as I had three weeks before.

The Moravian led me at a trot south through the soggy meadow. The little stream was to the left and across it I could glimpse some buildings that had for me a familiar air. I asked my guide and he said shortly, yes, that was the tavern.

A little lower down we found a bridge and went across it straight to the center of town. Soldiers were buzzing back and forth and I noted armed sentries at the doors of many houses. To one of these houses, we went; at its door, my guide stopped, pulled himself together and straightened his dress. Then he turned as if to do the same for me, but after one look of horror at my dirt and rags desisted.

He led the way into a small room, filled mainly by a table behind which sat a man whose face was in shadow. It was candle lighting time, but no candles were in the room. To this man whose face I could not see, my guide bowed, then pushed me forward and left the room.

"You will do nicely for us," the man at the table said, somewhat as if he were estimating the worth of a steer. Yet though I resented the air, my heart jumped with relief at his voice. It was Brother Marshall again.

"CLOTHES and a little cleaning, and you will do well," the Moravian went on. "We are embarrassed a little with the governor's folk." Our lads do not understand the English well. Someone must stand behind their excellencies' chairs at the tavern and wait on them. You will do that."

I was dumbfounded.

"But I am a prisoner," I exclaimed.

"Yes, a little one, perhaps. No doubt you will soon be freed. I asked the colonel for you and he said to take you for the time. Do not run away or they will make it harder for you—for us, too, perhaps."

"Fanning told you I might serve—" I was still doubtful.

The Moravian was getting impatient. "Yes, I asked him. He asked who is it, Craik, I said, and he told me to take you. You Regulators are all fools, you think Colonel Fanning a great beast. It is not so."

I thanked Heaven for the German pronunciation of my name. That was why Fanning had not recognized it.

"Johan," called Marshall sharply and my guide came in. He received a flood of German. Then to me in English, Marshall said:

"You are to be washed and given clothes. Then come back here."

Washed I was, and clothes, too, but not at first. Supper seemed more important. By dint of much gesturing, pointing to my mouth and rubbing my stomach, I gave Johan the idea. His round eyes stared at the notion that one could go hungry; but when I, in pantomime, assured him it was so, he busied himself. Back he came in two minutes, with a slice of hot beef laid in between the two halves of a small loaf of bread. Did anything ever taste half so good?

Then we went down to the creek in the dusk and finished the job and I splashed the water over myself and rubbed hard. Even so, some of the dirt clung, but I felt wonderfully clean and refreshed when I was through. Two weeks in filth had been a terrible experience to one brought up rather daintily. That over, I kicked my pile of clothes to one side and put on what Johan brought me, stout garments that were as warm as they are ugly. Breeches, shirt and jacket I was given, but here the equipment stopped. Johan pointed to his own feet. Shoes were too expensive for young men or boys in summer, I gathered.

So we went back to Marshall, and found him stewing over some accounts with two candles at the table by his side. He was talking to himself as we came in, and I heard:

"Like a plague of locusts, they eat. We must send to Bethania and Salem for more."

He looked at me, first with approval and then with a frown.

He pointed to my bare feet and spoke severely to Johan who vanished to come back in a second with moccasins—so much had German customs yielded to the frontier—and stockings. The servant of their excellencies was evidently to be togged out in style.

This much good, but when I got to my feet again, after donning the stockings and footgear, I saw a new note of dissatisfaction in Marshall's face.

"They took you to the colonel from here?" he asked. I nodded. Evidently he wanted more of my history.

"I wonder why they shall come so far for you," he asked, more of himself than of me. "It is good you are one of the little prisoners. The governor is rightly suspicious of many in these days. If I were to let an important prisoner free—" he looked at me almost with appeal—"You are a little prisoner, though. It is no matter about you."

Poor fellow, he was in a hard place. He wanted to play very safe with the governor, and he wanted also to be reasonably kind to a poor prisoner. At first, I thought I should keep silent, but the pathos of the situation struck me too hard. These Moravians were out to save their farms from the destruction at Sandy Creek. A false step with the governor would ruin them.

"They may think I am an important prisoner," I said. "Some one may tell them I was with those who blew up the powder."

Marshall's eyebrows drew together. He leaned over the table and put the candle close to my face.

"Is it so?" he asked.

"Does it matter, if they believe it?" I asked. "But no harm will come to you. I will not run away while you vouch for me."

He meditated this for a long minute. For a while I thought he was going to send me back to the banks of the creek, there to sort out my foul clothing from the muck and to don it again. Yet in the next instant his face lightened toward me, and I have a guess it was the thought of these English guests of his that determined him. He did want to impress them with his hospitality.

He got up, went to a shelf at the side of the room and came back with a book in his hand. It opened at the title page. It was a Bible in German.

"Swear on this, according to the custom of your people, not to attempt to run away while you are in my charge."

I kissed the book, lifted my right hand and swore. Marshall put the book away briskly and with a more settled countenance.

"NOW you will go to your duties," he ordered. "Johan will show you."

So, in Johan's care, I came back to the tavern where I had endured such evil hours. The cook, after a look at me, sent me off to wash my hands again and comb my hair. Then he set me, with two German lads, to laying the cloth in the tavern parlor. From time to time he called me to join him and told me, in a huge voice, what the German was for roast, wine, beer, bread, glasses and other things. Most of them were like enough to the English so I picked them up readily. I was to relay instructions to the German servants.

It might be thought that the idea of waiting at table like a bound boy should have depressed one with my background of education. As a matter of fact it did nothing of the sort. There is nothing like walking in a gang of prisoners for a week or two to take the nonsense out of you.

(To be continued next week)

Debenture Plan Discussed at National Grange Meeting

PATRONS of Husbandry from all parts of the United States met in Cleveland, Ohio, November 16 to 25 for the sixty-first annual meeting of the National Grange.

The most important action of the body from a strict internal standpoint was the rewriting of the Grange Digest. This recodification of all Grange law will be available to Grange officers early next summer. This was the first time Grange law had been thoroughly revised since the founding of the order 61 years ago, and outside of a rearrangement of parts there was surprisingly little change made in the original text of the founders of the order.

From a political standpoint the actions of the special committee on farm relief headed by Jesse Newsome, of Indiana, were most closely watched. The committee had the benefit of expert counsel in drafting this plan and National Master Taber and his executive committee were instructed to present the completed plan to the annual meeting of the American Farm Bureau Federation next week in order that the two organizations might be brought into harmony. This feeling of the need of harmony and united action of the nation's farm organizations was perhaps the keynote of the entire meeting.

Grange Plan Is Not Forbidding

The Grange plan of bringing about agricultural relief is not as forbidding as the language of the resolution adopted would make one believe. Stripped of its professorial verbiage the plan calls for the following:

1. Payment of an export bounty on surplus agricultural products, the price level reflecting the amount of the bounty.
2. This bounty to be in the form of a debenture certificate that is legal tender for the payment of customs duties.
3. Consideration to be given livestock and dairy farmers and manufacturers who use agricultural products by adjusted tariff duties to cover the increased cost of feed and raw materials caused by the payment of the bounty.
4. United action with other groups to work out a plan of farm relief based on the debenture form of the export bounty.

It was explained when the plan was under discussion that a debenture is nothing more or less than a certificate calling for a certain value —or in other words, a non-interest bearing bond.

The answer to the charge of subsidy was that this is the same to agriculture that a protective tariff is to industry. A protective tariff, it was explained, tends to prohibit the entry of goods into this country and by so doing prevents money from entering the United States Treasury. The export debenture plan will raise the level of surplus farm products to that which they would enjoy if they could receive the benefit of tariff protection. To the extent that the bounty is paid will tariff duties decline.

Member Studied Thoroughly

Where to make up this loss is no different from the question, where does the government get the money to make up the loss entailed by prohibitive tariff duties? Doctor Stewart, of the University of Illinois, answered it by saying that today tariff duties make up only 15 per cent of the federal government's income and suggested that possibly by further economy in government could the amount of the debentures be made up, or through increases in the income tax, or through levying of tariff duties on the vast amount of goods now entering this country free of duty.

It appeared to be the sentiment of the delegates, without an official expression, that the vast amount of agricultural products entering this country that come into indirect competition with American products should be made to stand the major share of this cost. Coffee, bananas and vegetable oils were cited.

So thoroughly had the Grange members studied the plan and its possibilities that only one dissenting vote was noted when it was finally put to a vote.

Of next interest to the farm relief plan of the Grange was the huge seventh degree class, when about 6000 received this highest degree of the order in Cleveland's great public auditorium. When the seventh degree was formally exemplified under the able direction of High Priest of Demeter Charles M. Gardner, with new robes and new scenery, there were nearly 9000 farm folks in the hall. Prominent among the visitors were Senator Arthur Capper, of Kansas, and Senator William E. Borah, of Idaho.

Tariff Played Big Part

The tariff played a big part in discussions by the Grangers. There was a call for a non-political consideration of tariff problems, and hope that there would not be a wholesale tearing up and rebuilding of the tariff following the next congressional election. The feeling was that tariff adjustments should be made by somebody outside of Congress, probably the Federal Tariff Commission of which Past National Master S. J. Lowell is now a member. Its powers should be extended to give it the necessary authority.

Three specific tariff items were mentioned—wool, corn and fertilizer. The commission was asked to investigate the wool tariff in the first instance and to raise the corn tariff in the second instance, while Congress was asked to remove all duties on fertilizer materials. The amount of foreign wool that has come into this country in the last five years exceeds one billion pounds while Argentina corn is depressing the market at every important seaport of the country.

Federal truck and bus regulations were frowned on and the Interstate Commerce Commission asked to suggest uniform law for the states to regulate this problem themselves.

Corn borer control was approved and Congress asked to make adequate appropriations to guard against ravages of this pest. Congress was also asked to provide funds for more fundamental agricultural research that agriculture might keep pace with industry which is spending millions on research problems. The need of more outlets for farm products was stressed and only by such research work can they be developed.

Discuss Taxation

On Muscle Shoals and reclamation the National Grange reaffirmed its former policies—the use of Muscle Shoals for manufacture of fertilizer in times of peace and of explosives in time of war and of no further reclamation and irrigation projects until the agricultural situation warrants.

The report of the committee on taxation called for more discussion of budgets in Granges, adherence to a strict budget plan by state and local taxing units, retention of the inheritance tax by the federal government and reduction of the nation's debt as fast as possible; opposition was registered to further reduction of the income or corporation taxes until the nation's debt was paid, to special elections for bond issues and to issuance of bonds to pay current expenses.

On support of education the committee on taxation called for a distribution of inheritance and income taxes to the states and school districts to support education. The basis of 10 cents per day per pupil and 50 cents per day per teacher was suggested by one speaker. The total of this would amount to about $240,000,000 aid to the school districts. The reason for this action was that wealth is rapidly being concentrated in the more populous sections.

Most of the officers were re-elected. The Grange meets in Washington, D. C., in 1928.—W. H. Lloyd.

Dairymen Gather at Annual Meeting

(Continued from page 3)

$3.69 per 100 pounds for 4 per cent milk delivered f. o. b. Philadelphia basis," said Mr. Allebach. The basic price at receiving stations in the 51-60-mile zone has also remained unchanged throughout the year and has been $3.11 per 100 pounds of milk testing 4 per cent butterfat.

Referring to the efforts of the association (1) make the supply meet the demands of the market, without a burdensome excess, Mr. Allebach said:

"During the year 1927, our highest production occurred in the month of June when the average daily deliveries reached a point 24 per cent higher than the average for the year. This is a substantially wider variation than occurred any time last year when the peak was also reached in June but which was only 15 per cent above the yearly average.

"There is no question but that a considerable amount of the flush production during the summer months this year was a direct result of the unusually favorable pasture conditions. To the degree that this variation came from this cause, it was not within the control of our producers to regulate it. To the degree, however, that it was caused by the failure of some producers to maintain their averages during the fall of 1926, thus throwing additional quantities of milk into the summer months, it was within their control to regulate. . . . There seems little question but that when farmers fail to maintain satisfactory winter production, much heavier summer production results and with this point in mind, we would urge every farmer to maintain his average winter production, each and every year, and thus avoid extremely high surpluses during the summer months."

Robert W. Balderston explained the workings of the Philadelphia Inter-State Dairy Council in his annual report on the activities of this ally of the Producers' Association. The Council is constantly increasing the scope of its efforts to increase the consumption of milk in the Philadelphia milk shed and to cooperate with producers and distributors to improve the quality of the milk supply.

Movies, dramatics, lectures, stories, exhibits and food demonstrations are some of the means used to preach the gospel of milk-for-health to grown-ups and children in Philadelphia. The Dairy Council has the close cooperation of school authorities, women's clubs and other organizations in this work.

The activities of the Council's Quality Control Department were classified as follows by Mr. Balderston:

(1) **Routine Work** of dairy barn inspections, milk plant inspections and sediment testing. (2) **Educational Work**, including meetings of milk producers for the purpose of improving the quality of milk or reducing the cost of production through a better understanding of breeding for production, proper feeding and economic factors of dairy farm management. (3) **Sales Promotion** to the consumer through explanations of the safeguards surrounding the milk supply in the Philadelphia territory. (4) **Special Activities**, including Milk Shows, Dairy Schools, exhibits, etc., (5) **Personal-Work**, including personal services rendered to individual dairymen or individual dealers in various phases of milk improvement problems."

A special meeting for the women of the association was held in the association's offices on Monday, under the chairmanship of Mrs. Robert W. Balderston. The program included addresses by members of the Dairy Council staff, musical numbers and a demonstration of one of the Dairy Council's plays for adults, "Listening In."—C. L. W.

There's nothing that can beat a nice looking fireplace if you have a furnace to keep the house warm.

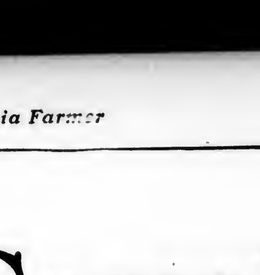
Was Valuable Carload

THE Grand Champion car load of fat steers of the 1927 International Exposition were Angus yearlings fed and exhibited by E. P. Hall, Mechanicsburg, Illinois. They were sold at auction at $45.50 per hundred weight to Eli Pfaelzer for McCann and Company, Pittsburgh. The Grand Champion load of the 1926 show brought the record price of $55.00 per hundred weight.

Camel

The cigarette preferred by experienced smokers

In the remarkable growing popularity of the cigarette many brands have bid for favor, but Camel continues to lead by billions. Quality put it there; quality keeps it there.



If all cigarettes were as good as Camel you wouldn't hear anything about special treatments to make cigarettes good for the throat. Nothing takes the place of choice tobaccos.

Toledo, Ohio, December 3, 1927.

Cloverseed, cash, imported, $16.40; mixed, domestic, $17.60; December, domestic, $17.60; December, imported, $16.80; February, domestic, $17.90; March, domestic, $17.85. Alsike, cash, $16.15; December, $16.15; January, $16.35 asked; February, $16.55 asked. Timothyseed, cash, $1.95 asked; December, $1.95 asked; March, $2.10 asked.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, December 5, 1927. Quotations cover sold car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$ 38.50
Spring bran	37.50@38.00
Soft winter wheat bran	38.75@39.00
Hard winter wheat bran	38.50@39.00
Standard middlings	38.00@38.50
Soft winter wheat middlings	39.50@41.00
Flour middlings	41.50@42.00
Red dog flour	47.00@48.50
White hominy	42.75@43.50
Yellow hominy	40.75@41.25
Gluten feed	41.00
26 per cent cottonseed meal	45.75
41 per cent cottonseed meal	49.00
43 per cent cottonseed meal	51.25@51.75
34 per cent linseed meal	52.20@52.25

For Baltimore, Cumberland and Wilhamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This Week	Last Week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .51½	$ .51½	$ .48	$ .54
Eggs, fresh gathered extra firsts (N. Y.)	.49½	.50½	.50	.55½
Potatoes, 120-pound sack (Philadelphia)	2.25½	2.25	2.52½	3.37½
Steers, good to choice (Lancaster)	13.50	13.50	12.87½	9.50
Hay, Number 2 timothy, baled (Phila.)	17.25	17.25	16.50	23.50
Wheat, No. 2 red winter (Philadelphia)	1.39	1.36½	1.37	1.48½
Oats, Number 2 white (Philadelphia)	.64	.60½	.60½	.57¾

Egg Market Is Weak

Review of the Week Ending December 3

POTATOES—The eastern potato markets were dull and weaker during the week. Supplies were moderate to liberal and the demand limited. Prices held generally steady although ordinary stock sold at slightly lower prices. Shipping point markets were very dull during the early part of the week and many points reported too few sales to establish quotations. Toward the close of the week wire inquiry improved slightly especially at Maine shipping points. Some dealers express the opinion that this dull condition will prevail until after the holiday season and after that time the market will improve.

APPLES—The apple market in Philadelphia and New York was firm throughout the week. There was a fairly active demand for the best grades of fruit. Receipts of nearby stock by motor truck were moderate and the quality was generally good. Comparatively few drop or windfall apples are arriving on the market. The lighter crop and the good demand at present price levels makes prospects for the market during the holiday season much brighter than last year. Some buyers are holding off as they claim that the consumer will not pay such high prices.

LIVESTOCK—The Chicago hog market was lower than last week but beef steers were somewhat higher. She stock and vealers advanced while stockers and feeders were generally steady. Fat lambs and yearling wethers were steady. Sheep, feeding lambs and heavy calves were about unchanged.

HAY—Prices of hay held fairly steady during the week despite the limited demand. Offerings were generally light. Offerings of medium and low grades of timothy were more than ample for the demand. Alfalfa hay held firm with a good demand.

GRAIN—The wheat market was firm with a fairly active demand. Country offerings of corn were light and prices advanced to the highest point of the season. Receipts were light at most markets and a large percentage of new crop grain was offered. Oats prices also rose to the highest point of the season. Rye advanced about 3¢ per bushel at Minneapolis and 6¢ at Chicago for the December future quotations.

EGGS—The New York egg market was weak during the early part of the week but toward the close the market showed some improvement. The best grades of nearby white eggs were in moderate demand and prices advanced slightly.

POULTRY—The New York live poultry market was irregular early in the week. Warm weather on Tuesday was unfavorable for trading but on Wednesday the market showed a firmer tendency. Fresh killed poultry sold slowly and receipts were liberal.

BUTTER—The butter markets held steady throughout the week and prices were unchanged. Prices at Chicago advanced fractionally. Receipts of fresh butter continued light but trading was rather slow. There was an accumulation of medium and lower grades at some cities. There was more interest in the fancy grades of storage butter.

County News and Comment

Berks County, Pa.—Corn is almost all husked and placed in cribs. Some farmers have stacked their corn fodder, as nature hauling has been started while some have already started to plow soil. A severe rain storm passed over this section last Thursday evening and caused some damage. A few miles from here a most severe storm destroyed a one-room school house, untouched barns and did some minor damage. Cattle sales are all over. A few farmers formed a club and bought a few car loads of steers at Lancaster and will fatten them with their corn crop believing they can realize more for their corn. Help is scarce on the farms. Very few changes in farms have been reported to take place in the spring. Apples are very scarce and retail at $3 per bushel. The potato market is very quiet. The retail price is $1.20 delivered. The cows are still in pasture and will soon change to dry feed which changes very often the flow of milk. A corn show will be held in Topton on December 9 and 10 in P. O. S. of A. Hall. It will be conducted on a cooperative basis. The Berks County Agricultural Extension Association is cooperating as well as four clubs and six Granges. Market prices: wheat, $1.50; eggs, 62c; butter, 6—, new corn, 70c; oats, 45c; rye, 90c; dressed pork, 15c; chickens, 20c; hay $24; straw, $16.—W. S. M., Nov. 24.

Blair County, Pa.—Regular fall weather now, lots of cloudy, damp weather with a few nice warm ones mixed in. There is an epidemic of whooping cough in our local schools but otherwise health is good. Every one is busy getting ready for winter now, most of the corn is husked and some farmers are starting to plow, owing to the shortage of corn this season butchering is being done a little early and most hogs are in good shape. Wheat in general is looking good. Wheat is selling for $1.25 a bushel now. Corn has no fixed price as it varies greatly in quality. Eggs scarce and high, 60c. Some dressed hogs are selling for 15c.—H. F. H., Nov. 21.

Clearfield County, Pa.—We have had some cold days but now it is warm and very wet. Wheat looks fine. The corn and potato crops are pretty well out of the way. Potatoes, $1.25@1.50; cabbage, 1½c; turnips, $1; hay, $22; dairy butter, 50@60c; eggs, 45@50c. Our markets are very slow now owing to the coal strike. A few miners are at work as non-union men. Some interest is now aroused in a milk shipping plant at Curwensville. —D. H. W., Dec. 1.

Dauphin County, Pa.—Pleasant fall weather at this time after a few light snows. Most farmers have almost finished corn husking. Crop well matured. Hunters report rabbits plentiful but not many turkeys. Trappers are busy. Much wood being cut and hauled to towns. Work on improving various roads in the county continues. Some farmers feeding steers to meet local demands. Celery crop large and of good quality. Eggs scarce at 80c; potatoes, $1.30; butter, 60c; eggs, 65c.—I. F. M., Nov. 28.

Gloucester County, N. J.—The mild weather all through November has permitted the farmers to get their work finished before cold weather set in. Ploughing is about all through and the crop has been extra good. Prices have ranged from 75c to 85c a bushel and a good market exists at this level. Sweet potatoes are moving in good volume from Swedesboro and other points to middle western markets. The hot weather of the last week in November has been unfavorable to potatoes in storage and prices have weakened to about $1.50 per bushel made good or culled. Apples are being closely held in storage with only a moderate amount to sell in comparison with other years. The bulk of the crop is in strong hands and little movement is expected until late January or middle of February. So few apples are moving that no prices are available to judge the market. Late blight has developed in the red skin potatoes held in storage and considerable loss is being reported from growers in many counties. Prices are low with the best of the stock moving slowly at $1 per bushel and some distress lots at much lower prices. Dealers and egg buyers have been excellent over the Thanksgiving holiday. Dealers report a big demand for quality stocks and prices have ranged from 35c to 42c a pound for roasting chickens; eggs, 65c; turkeys, 55@60c. Egg production low on account of the prevalence of bronchitis in numerous flocks. —A. K.

Lancaster County, Pa.—After a short period of winter weather we again are enjoying a mild climate and pastures are green and still furnish grazing for the cattle. Eggs are not at all plentiful and are worth 65c. Butter is 59c. Tobacco buyers have been in the vicinity but we have not heard of any sales as cannot give the price on that commodity. All feeds have advanced $2 per ton on December 1st.—H. C. R., Nov. 30.

Luzerne County, Pa.—We noticed that the grain fields looked better in Bradford County than in our own. We don't seem to see many grain fields in our own county. Fall work seems to be pretty well along and some corn is still standing. Prices, eggs 50c and scarce, roosters to huckster farmers, 20c; pullets and hens, 28c in market they were from 30c to 35c. Apples, $2; quite a difference in price compared with last year; potatoes, $1.50 but market dull lately and the poultry market has been hauled down to capacity for several weeks.—M. G. T., Nov. 26.

Salem County, N. J.—Farm activities for December in Salem County are centered around the dairy and the fur industry. Milk production is holding up to normal levels due largely to the mild weather that has prevailed all through October and November. Temperatures have held above normal for weeks and dairymen have been able to keep their cows out on pasture until the first of December without any discomfort. Grass has remained green and frost has not damaged it in the least in many places. The stocks of seed potatoes are still heavy and growers in many instances are moving them into table stock markets with resulting low prices. Many lots have been sold as low as $1.20 per cwt. net to the grower. Out along the water-front districts and creeks, the farmers are devoting much attention to muskrating and the gathering of fur. Skins are selling at higher prices than usual with the better grades bringing as much as $1.25 per fur. The market has not really opened but indications point to much higher prices as the crop now looks like the lightest in many years. There appears to be plenty of labor for all requirements and prices are holding steady at the usual range for winter time work. The poultry market is at excellent price. Cheap corn has resulted in the poultrymen keeping the birds on the range until full grown with the result that the birds are big and fat and the dealers have paid full price for them. Some fancy tenpound roasting chickens sold last week at high as 45c a pound, a record for South Jersey this season.—E. M. B.

Somerset County, Pa.—The weather had been fine the last few days for farmers to get their corn in the barn and fodder to shred. Wheat looks looking fine. Potatoes all dug and a good crop. Oats about all threshed yielding from 20 to 40 bushels to the acre. The hay was good and farmers have enough feed for this winter, except corn. Most of it was put in the silos. Clayton Rhoads, of Somerset Township, has a Hampshire ewe sheep that gave birth to twin lambs in February 1927, and again in October, 1927, all four lambs are living and growing. Something old sheep growers say they never saw or heard of before. Dairy cows are scarce and high in price, not many sales. Most machinery and household goods are taken to Somerset and sold at market day sale every first Saturday in the month. Very few apples to be had this winter. Potatoes and cabbage are buried or are in the storage cellars. Pastures have been good and the cows are out part of the day as the heavy feeding is done in the stable. Prices: oats, 55c; hay, $11; potatoes, $1; eggs, 45c and scarce; butter, 56c; poultry, 20@25c.—H. W. B., Nov. 19.

Sullivan County, Pa.—Weather just now is extremely changeable; cold weather with warm rains following. If this weather continues throughout December it will seriously affect winter wheat. Thus far winter wheat has shown promise of being an unusually good crop. Oat seeding is also a very fine crop. Farmers are now engaged in getting out a winter supply of wood. Most farmers have already butchered their hogs each farmer butchering an average of five. Some prices: oats, 70c; buckwheat, 80c; apples, $1.50; potatoes, $1.50, butter, 55c; eggs, 45c; lard, 25c; pork, 15c, dressed.—M. G., Nov 28.

York County, Pa.—The weather this fall has been very mild, enabling the farmers to get their corn away in good shape. The crop is much better than was expected. The acreage of wheat sown this fall is about normal and at present has a good appearance. Potatoes about all marketed except a few that will be kept for spring trade. The price has been practically stationary all fall at about 90c a bushel. Several car loads of certified seed potatoes have been ordered but the demand exceeds the supply available. Hogs seems to be plentiful and the price is low while cattle of all kinds are scarce and high in price. Squirrels are very plentiful this fall and owing to the scarcity of nuts have been very destructive to the corn crop. Wheat, $1.32; oats, 50c; rye, $1; corn, 90c; hogs, $10.50 cwt.; eggs, 50c; chickens, 22@25c; bran, $1.90; tankage, $4; potatoes, 90c.—W. K., Nov. 29.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

BACK in the olden times the good farmer was the man who produced practically all the food that his family needed on his land as well as a good portion of the clothing. Sheep, cattle, poultry and hogs furnished the meat. Flour was milled from the grain produced on the farm and vegetables were grown and stored for winter use.

Railroads, refrigeration and improved methods of marketing have brought great changes. The farmer today has become more of a specialist and there are very few who produce all the food for the family on their farms. Today you even see cans of tomatoes, peas and other vegetables on the pantry shelves.

Economically it is sound for a section to produce the crop for which it is best suited but the very conditions that have made this possible have brought competition and other problems. The money received by the average farmer today is a much larger sum than under the old methods but his expenses have risen in greater proportion. The worker in the city has the same problem and he finds it increasingly difficult to make his salary cover his expenses. I do not think it would be practical or possible to go back to the old conditions but I believe the farmer today could profitably produce more things for his own use. I have worked on dairy farms where there was no vegetable garden and all supplies of this kind were bought in town. There are many farms that do not keep enough chickens to supply their own needs. I can see now where I would have been better off when I was on the farm if I had produced more things that I bought at the store.

Products Available for Long Season

In looking over some government reports I came across an illustration of these present-day conditions that has been brought about by the various improvements I have mentioned. This last season 450 carloads of Texas turkeys were received in the eastern markets for the Thanksgiving trade. In addition to these Texas turkeys, birds were received from Argentina. About half of the celery consumed in Philadelphia and New York comes from the distant states of Florida and California. Grapefruit and other citrus fruits, such as oranges, lemons and tangerines are produced in these warmer climates and by improved handling are available during the entire year not only on the metropolitan markets, but in the smaller cities and towns throughout the land. Bananas, a tropical fruit, are shipped by boat to our large seaboard cities. Last year an equivalent of about 23,000 carloads were imported through New York alone. The bananas are harvested green and ripened in scientifically constructed banana rooms. Strawberries from Florida will soon be coming into the markets in refrigerator crates.

Many products which disappeared as soon as the frosts hit the nearby sections are now available throughout the season. Tomatoes were received in carload lots in Philadelphia during eleven months last year. Peppers are seen on the market practically every month of the year as well as cucumbers, peas, lettuce, radishes, spinach and rhubarb.

Made Champion

CALIFORNIA STAMP, born October 2, 1926, a crossbred steer whose sire was a purebred Shorthorn and whose dam was a purebred Angus was made Grand Champion of the 1927 International Exposition at Chicago. The Grand Champion was bred, fed and exhibited by the University of California under the handling of the head herdsman, Alex MacDonald, who has fitted two other University of California steers that won premier honors in previous International show ring competition. California Stamp was a dark red animal and his official weight was 1055 pounds. He was finished on a mixed ration of barley, oats, bran and roots and was never corn fed. He was sold at public auction on Thursday at $2.35 per pound to the New City Packing and Provision Company. The Grand Champion of the 1926 International sold at $3.60 per pound, a record price.

She Built Up a Profitable Business

(Continued from page 3)

ground each season. This rotation to clean ground is an important factor in controlling disease, as not a single case of blackhead appeared in the flock.

During the growing season the developing birds are carefully watched and guarded day and night. Mr. Baker has built a small house on wheels in which he sleeps near the flock every night, with several dogs as hand to give the alarm against prowlers of any sort that may enter the vicinity.

The best of the birds are eagerly sought by breeders, and the others, of course, meet with a ready demand in the holiday markets. The success of the Bakers with turkeys has stimulated the raising of these birds in the Peninsula to such an extent that local dealers sold 250 tons of turkey feed the past season.

The use of cod liver oil in turkey feeding is a new thing, but the feeding of this combined with the rotation of ground and isolation from common fowls is probably responsible for the control over blackhead.

During the growing season the developing birds are carefully watched

TIGHT BINDING

Line your cows up for inspection

ARE your cows in good condition? You may think they are, but do you know? Do you line them up every day—at least mentally—like a company of soldiers, for inspection?

Look them over. Do they have a good stretch and are they alert when they get up after lying down for some time? Or, are they sluggish and appear lifeless and dull? Do your cows lick themselves when they get out and are their coats sleek and lustrous, or do they stand all humped up with hair standing on end?

These are the signals that the experienced dairyman watches for like a hawk. They tell him, in plain language, whether his milkers are in good condition or not.

The most important item in keeping heavy milking cows in good condition is the dairy ration. If it is not right as to its sources of protein and other nutrients, the cows will not do well at the milk pail.

UNION GRAINS has an unbroken record for keeping milking cows in the pink of condition. It was the first mixed dairy feed manufactured for dairymen in America. Brewers' dried grains and dried distillers' grains always have been, and still are, its base. To these outstanding sources of protein are added the choicest sound grains that can be bought. Cows like it, thrive on it, and its value is shown in the milk pail. UNION GRAINS *is a perfect ration.* Your dealer sells it.

We will send our new bi-monthly publication, the "UBIKO Dairy Service Bulletin," regularly to dairymen who ask for it. Each issue will contain a helpful article on some phase of dairying written by a recognized authority—also other up-to-the-minute information regarding feeding, health, etc. Write today.

The Corn Borer May Stay With Us

Cleaner Plowing Promotes Better Farming

OF ALL methods yet devised for the control of the European corn borer there has been something spectacular in practically every one with only one exception. This one exception is altogether too commonplace to receive much attention or publicity, but it is a mighty important part of farming practice. It is nothing more than clean plowing.

Clean plowing means good plowing. It means plowing to the proper depth and covering all the trash that may have accumulated in the field.

The theory of clean plowing as a control measure is simple and sound. The borers will take refuge in corn stalks and remain there during a considerable part of the year. If the stalks are plowed under, the borers will eventually emerge and dig their way to the surface of the ground, but they have never been known to travel more than 25 feet.

This Plow Covers All Trash

If there are no corn stalks or other pieces of refuse or trash which will harbor the borers after they find their way to the surface, they soon die. The sunlight has a marked effect on them; birds or other insects soon pick them up and they are destroyed. The chief consideration is that there be nothing on the surface of the ground which might afford a refuge for the borers.

This big base plow designed for Corn Borer Control work is becoming popular for all plowing jobs

With this idea in mind, manufacturers of farm implements have been developing a plow that would do a satisfactory job of covering all trash, and such plows can be secured thru the regular trade channels today. There is nothing remarkable about the plows. They are just regular moldboard plows, but instead of cutting a furrow 12 to 14 inches wide, they cut an 18-inch furrow. The theory is simply this: If you want to cover up the trash, you must have the dirt to cover it and an 18-inch plow will turn considerably more dirt than will a 14-inch plow. In fact, one of these 18 base plows will go right into a field of standing corn stalks and without any stalk cutting operation or harrowing down, it will plow and cover everything in sight.

30-Foot Strip an Insurance Measure

The most accepted practice so far has been to go into a field, cut all stalks off at or below the ground for a distance of 30 feet in from the boundaries of the field and throw this trash over into the center or burn it. Then go in with the wide base plow and do a good piece of plowing. Cleaning up the 30-foot strip all around the field is merely an insurance measure against any of the borers coming to the surface near the border and getting out of the field.

There are several distinct advantages in the clean plowing method with the wide base plow. First of all, a better job of plowing is done. The soil is more thoroughly pulverized and better farm plowing is promoted. All trash and stubble may be covered and the borer control requirements fulfilled at practically no extra cost to the farmer.

Practically all other borer control measures mean an extra cost. Burning costs time and money. Cutting with a special corn binder which cuts at the ground or below it will cost more money in time and power necessary to operate the machine. Even the stubble heater entails an extra cost of about 50 cents an acre, but it really doesn't cost any more to do a clean job of plowing than it does to do a poor job of plowing.

The Most Logical Method of All

This should not be construed as meaning that one cannot do a good job of plowing with a 14-inch plow, but it is only reasonable that all of the long stalks cannot be completely covered with the dirt that a narrow base plow will turn while they can be covered satisfactorily if the plow employed will turn sufficient dirt to cover them.

So, unsung and unheralded; commonplace and homely as it may be, this very commonplace method of controlling the European corn borer bids fair to become the easiest and most logical method of all.

No doubt the corn borer is with us to stay for some time. Like the Hessian fly, he seems to enjoy our climate and our company, and like the Hessian fly, he will no doubt commit some serious depredations if we don't watch him, but as soon as someone discovered that a little later seeding of wheat would fool the fly, he ceased to be such an agricultural high mark. Perhaps the oldest and simplest of all farming machinery will be the means of checking the depredations of the corn borer. Meanwhile, cleaner plowing will promote better farming all around.—F. A. M.

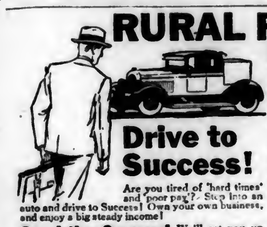
Where Credit Is Due

UNINTENTIONALLY, we failed to give proper credit in our issue of October 15 for the interesting drawings that illustrated the article entitled, "Eyes They Have but They See Not," by Dr E M Gress, Pennsylvania State Botanist. The sketch showing the habits of the dandelion was from Dennstedt's "General Botany" and was used through the courtesy of the publishers, Ginn and Company. The picture of the insect and the milkweed was taken from Bailey's "Lessons with Plants," with permission of the Macmillan Company. The photograph of the Blue Sailors or Chicory was from "Farm Weeds of Canada."

Overshot the Mark

"I've got just the horse for you," said a liveryman to a farmer who was a prospective customer. "He's five years old, sound as a bell, and goes ten miles without stopping."

"Not for me," he said. "Not for me. I lif eight miles from town out, and mit dot horse I haf to valk back two miles."



RURAL RETAILERS!

Big Firm Will Finance You

Without a penny of investment from you, the McConnon Plan will give you a sound steady business, with all the freedom, money and happiness that goes with it. AUCTION
550 Grade Dairy 550
CATTLE

The greatest sale of high class grade dairy cattle ever presented to the public will be held

December 14, 1927
Fond du Lac, Wisconsin

This sale will be held in O. G. CLARK'S modern steam heated sale pavilion which seats 3000 people and stables 550 head of cattle.

The O. G. CLARK & CO., INC. Fond du Lac, Wisconsin, and the LA CROSSE COUNTY DAIRY CATTLE CO., INC., West Salem, Wisconsin, by combining their efforts to assemble the choicest array of grade dairy cattle ever presented to the American public.

These well known companies have held three successful sales this fall and plan to make this, their final sale of the present season, the most colossal auction of strictly high class cattle ever attempted.

Write for further particulars to
O. G. CLARK, Mgr.,
Hotel Retlaw Fond du Lac, Wis.

GOATS

WORLD'S Best Toggenburgs & Nubians, utility milkers, $15; purebreds, $25. Free book. Valley Goat Ranch, Box Kids, 115, Goldsboro Goatery, Manheim, Pa.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical compendiums a farmer-stockman can obtain.

ABORTION.—I have nine head of milk cows and part of them dropped their calves from 40 to 60 days ahead of time. Some of the calves were dead when born and I had trouble getting the afterbirth. Can you tell me what to do to prevent this from happening again? I have been using a syringe on my cows and also using disinfectant in my stables. I have a Jersey bull. Do you think the trouble might be in the bull?—G. W. B., Everett, Pa. From the description, it would appear that you have abortion in your herd and that the trouble with the retained placentas was but an accompanying condition of abortion. It is advisable to separate the animals that abort and keep them separated until such time of discharges. The stables should be kept disinfected thoroughly and all litter as well as carcasses of the calves either burned or buried. The bull may be a carrier of the disease and should you have purchased this animal recently and had the other animals raised on your farm, the presence of abortion in your herd might be led to him. It is usually advised that a blood test be made of the animals in a herd so that one may know which animals are carriers of the disease. The blood test does not tell which animals abort, however, it does aid in the matter of precaution which one observes in the handling of such animals during the period of pregnancy. Strict attention to isolation, sanitation and hygienic measures with an application of the blood test seem to yield the most satisfactory results.

HYSTERIA OR FRIGHT DISEASE—I have a young hound dog that takes a spell once in a while of running and barking. Seems scared and afraid while in this condition.—L. C. A., Millbrook, Pa. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet and an excessive allowance of carbohydrates such as potatoes, white bread or macaroni, over loaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation. Dogs need meat, as that forms an essential part of the diet if dog is allowed choice of feed. Your veterinarian should be consulted and an attempt be made to determine the cause of the trouble. If it is due to faulty diet this can be changed. If due to parasites these can be controlled by the use of the proper worm medicines.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions. 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

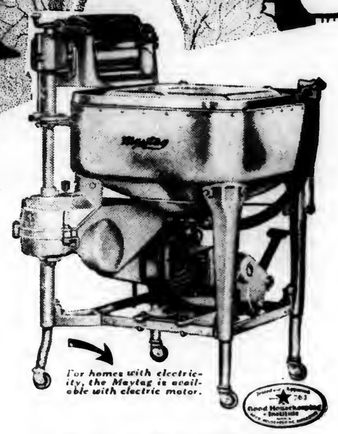
The Ideal Gift for the FARM HOME



The NEW Maytag
Years in Advance of the Times

THE new Automatic-adjusting, Roller Water Remover, the new Safety Feed Board, the new Gasoline motor, that starts with a flip of the foot lever and gives the same sure flow of power as an electric motor, make the Maytag more than ever the ideal farm washer.

What more delightful way to express the holiday sentiment than by the gift of the new Maytag, with its many outstanding improvements. She will marvel at its helpfulness, speed, thoroughness and convenience. It will be a weekly source of joy and happiness for years to come.

New Gasoline Multi-Motor

See the famous New Maytag Gasoline Multi-Motor. The engine and starter are combined in one unit—"Step on it" and away it goes, with an abundance of sure, smooth power.

So compact is the new Multi-Motor that it is interchangeable with the electric motor by removing only four bolts. The Automobile-type carburetor, high-tension magneto and speed governor make it a modern engineering masterpiece—in-built, no belts to line up—a woman's motor.

Free Trial Washing

Write or telephone any Maytag dealer. Have a new Maytag—gasoline or electric-powered—sent to your home for Christmas. If it doesn't sell itself, don't keep it.

Their Gardens Were Money-Makers

THE Lititz Junior Garden Association recently held a meeting at the home of Mr. Martin Muth. All of the boys and girls reported a nice profit on their gardens. The market, which was started in the early summer, proved a great success and provided an outlet for their surplus vegetables.

Throughout the season the gardens were kept in fine shape and much practical knowledge was gained from actual experience and from the talks of Mr. Huffington and Mr. Kelm.

Prizes were given to the members on the appearance of the gardens during the summer and on the accuracy and completeness of their record books. The prizes were distributed as follows: First, Henry Burkholder; second, Mary and Milton Brubaker; third, Catharine Rohrer; fourth, Lloyd Shaeffer, and fifth, Ray Bushong. The Garden Club won a twenty-dollar prize at the Lititz Community Show, which was awarded together with five dollars from each of the Lititz banks to the girls and boys of the club.

The following officers were elected for the coming year: President, Mary Brubaker; vice president, Charles Kopp; secretary, Catharine Rohrer; treasurer, Ray Bushong, and reporter, Milton Brubaker.—M. M. B.

Show Poultry and Pets at New Jersey Show

THE fourth annual poultry, pigeon and pet stock show held in Bloomfield, New Jersey, on November 29 was the largest of the four annual events held under the auspices of the Essex County Association.

Birds were exhibited from seven states and twelve counties in New Jersey. The states of Pennsylvania, New York, Maryland, Indiana, Ohio, Delaware and California were represented at the show, and the counties of Essex, Union, Passaic, Morris, Monmouth, Somerset, Bergen, Warren, Middlesex, Sussex, Hunterdon and Atlantic were ably represented by exhibits.

Over 1000 entries were made for the show. There were 394 cages of 508 birds, 130 rabbits and 630 pigeon entries, which ranks it among the leading shows of the state.

Essex County boys and girls, members of the Essex County Boys' and Girls' Poultry Club won 12 first, 10 second, 6 third and 1 fifth prizes in competition with the adults in the poultry division.—A. K.

Have Rhubarb Pie This Winter

LOVERS of rhubarb pie and rhubarb sauce need no longer wait until spring to enjoy these favorite desserts. Science has shown us a means of having rhubarb all winter long that is within the reach of every gardener if this fine product is wanted during the long winter months. Quick action will be necessary, if advantage is to be taken of this method this winter. The rhubarb roots are to be dug before the ground freezes and left uncovered until they are thoroughly frozen. This freezing is necessary for otherwise the roots will not sprout. They must not, however, be allowed to thaw and then freeze again.

A portion of the roots may be covered with hay or straw to prevent alternate thawing and freezing, and the rest may then be taken into the cellar or some suitable place for forcing. For ordinary forcing in winter, the roots are placed in either sifted coal ashes or sand. The crown is put about 2 inches below the surface, after which a thorough watering is made. The plant is thereafter kept in a moist condition.

Best results will be obtained if there is no light, for under such conditions a crop of long, reddish shoots with small yellow leaves will be produced. The ideal temperature for forcing rhubarb is between 50 and 55 degrees. If the cellar is kept warmer than this, spindly shoots will be produced.—A. K.

Eastern Exhibitors Take Many Prizes

Junior Exhibits Have an Important Place at International Livestock Show

By W. H. TOMHAVE

THE 1927 International Livestock Exposition surpassed all previous shows from the standpoint of quality of the livestock on exhibition. Weather conditions were ideal with the result that more country people attended than at any time in the history of the show. Breeders of beef cattle, sheep and horses reported more actual sales and more inquiries for breeding animals than any time during the past ten years.

Meat Exhibit Attracts Attention

The International is becoming a great educational institution because of the scope of the exhibits and the added educational features provided each year. The exposition not only features the livestock show but much space is devoted to the hay and grain show and the exhibits put on by the United States Department of Agriculture, state colleges and experiment stations, featuring the results of experimental work. The meat exhibit of the National Livestock and Meat Board is another feature that attracts a great deal of attention. The steer exhibition by the boys and girls in the junior feeding contest has grown from a small beginning a few years ago to a large part of the show and many of the entries excel the individuals exhibited by the adults.

In addition to exhibiting calves, swine and sheep, a junior judging contest is held each year. Twenty-two states were represented in this contest and first place was won by the team from Oklahoma. The eastern states were represented by teams from Pennsylvania, Virginia and West Virginia.

Two inter-collegiate judging contests were held, one in judging all classes of livestock and one team judging meat. Twenty-two teams participated in the livestock judging contest and twelve colleges had meat judging teams. Pennsylvania was twentieth in the general contest and seventh in the meat contest. Both contests were won by teams representing the Iowa State College, Ames, Iowa.

The single steer show was the largest and best that has ever been held. The Aberdeen-Angus and Hereford breeds were represented by the largest number of entries followed by Shorthorns and the grades and crossbreds. All the single-steer classes were judged by Walter Bigger, of Scotland, who had the honor of judging for the third time at the International. The grand champion steer was a senior calf, a crossbred Shorthorn-Aberdeen Angus, exhibited by the University of California. This is the third time this coveted honor has gone to this institution. The champion Aberdeen-Angus steer and reserve grand champion was exhibited by the University of Illinois. The champion Hereford steer was exhibited by the St. Armour Co., Mortonville, Pa., and the champion Shorthorn came from the University of Alberta, Manitoba, Canada. The three leading beef breeds were represented by approximately the same number of cattle on exhibition. The quality and uniformity of the Aberdeen-Angus exhibits was one of the features of the show. This was especially noticeable in the aged bull class and senior and junior calves.

Grand Champion Hereford Bull owned by St. Armour Co., Mortonville, Pa.

Both East and West Win Honors

The grand champion bull was Revolution 7th, exhibited by Harrison and Ryan, of Harlan, Iowa. The grand champion female was Glencarnock Jessie 9th, exhibited by Briarcliff Farms, Pine Plain, N. Y. In the Hereford division the grand champion bull was Buck Avalanch, exhibited by St. Armour Company. The grand champion female was Laura Haitland, exhibited by J. N. Camden, of Versailles, Ky. The grand champion Shorthorn bull was Loyal Browndale,

Can the Family Keep the Home Farm?

By STEWART ANDERSON

WE HAVE already described why modern life insurance, as issued by legal reserve companies, is sound, and have described the chief difference between the stock company and the mutual company, saying that either kind is safe beyond the slightest question. And now we will proceed to lay before you some of the things that life insurance is doing for a host of farmers. We will divide them into three sections:

Protection for the family.
Education of the children.
Investment and accumulation for old age.

The first thing that life insurance suggests is what is called a Clean-Up policy. If you should go today it is very likely that you would leave some unpaid bills, some machinery and equipment installment obligations, some unsecured note at bank, perhaps some other things, and there would be the expenses of your last illness. These things would have to be paid promptly and from free money if your wife and family were to have a chance to start clean in their new problem of life. They would probably have all they could do to make a comfortable living from the farm, without carrying the burden of debts that it might take years to pay. A Clean-Up policy would immediately wipe out these debts. And there should be included in it enough money to keep the family going for at least a few months.

The next thing to be considered is the mortgage. You, with your brains and labor and experience and credit, would be gone, and your family must carry the load. Could they meet the interest? Could they meet the installments if the mortgage calls for installment payments? In very many cases they could not. So life insurance is taken to provide the money to wipe out the mortgage or heavily to reduce it, immediately after the husband and father has gone.

Term Policy Rate Is Lowest

There are two mortgage policies which meet this need. One is called a Life policy, and the other is called a Term policy. A Term policy provides that if the insured dies within a given number of years, the policy will be paid. At the end of that given number of years, the insurance comes to an end. The rate on the Term policy is the lowest that life insurance knows, the reason being that the risk of the company is limited, for it may not be called on to pay the policy at all.

If your situation is such that you cannot take one of the permanent forms, Life or Endowment, or if you already have a sufficient amount of that kind of insurance, and all you need, or all you can pay for, is a Term policy, that is the kind to take.

You can have a Term policy that will supply the money to pay off the mortgage if you die while the policy is in force; that will pay you a monthly income if you become totally and permanently disabled before the age of 60 or 65, and that also will relieve you of all further premium deposits, and that at your death, while the policy is in force, will pay your widow the full amount of the insurance.

Such a policy would clean off the mortgage if you died or, if you became disabled, the income from it, until the policy expired, would be more than enough to meet the interest charges and the taxes. If your mortgage is for $5000, and you are paying eight per cent, the interest would be $400 a year. A $5000 Term policy would give you a monthly income of $600 a year if you became disabled. You would receive this income until the Term policy had expired.

If you can take a Life policy you will be doing far better. A Life policy is payable at your death, no matter if you live to be a hundred. If you become totally and permanently disabled before age 60 or 65, the income is lifelong, and the premium deposits immediately stop.

Their Gardens Were Money-Makers

THE Lititz Junior Garden Association recently held a meeting at the home of Mr. Martin Muth. All of the boys and girls reported a nice profit on their gardens. The market, which was started in the early summer, proved a great success and provided an outlet for their surplus vegetables.

Throughout the season the gardens were kept in fine shape and much practical knowledge was gained from actual experience and from the talks of Mr. Hufflington and Mr. Keim.

Prizes were given to the members on the appearance of the gardens during the summer and on the accuracy and completeness of their record books. The prizes were distributed as follows: First, Henry Burkholder; second, Mary and Milton Brubaker; third, Catharine Rohrer; fourth, Lloyd Shaffer, and fifth, Ray Bushong. The Garden Club won a twenty-dollar prize at the Lititz Community Show, which was awarded together with five dollars from each of the Lititz banks to the girls and boys of the club.

The following officers were elected for the coming year, President, Mary Brubaker; vice president, Charles Kopp; secretary, Catharine Rohrer; treasurer, Ray Bushong, and reporter, Milton Brubaker.—M. M. B.

Show Poultry and Pets at New Jersey Show

THE fourth annual poultry, pigeon and pet stock show held in Bloomfield, New Jersey, on November 29 was the largest of the four annual events held under the auspices of the Essex County Association.

Birds were exhibited from seven states and twelve counties in New Jersey. The states of Pennsylvania, New York, Maryland, Indiana, Ohio, Delaware and California were represented at the show, and the counties of Essex, Union, Passaic, Morris, Monmouth, Somerset, Bergen, Warren, Middlesex, Sussex, Hunterdon and Atlantic were ably represented by exhibits.

Over 1000 entries were made for the show. There were 394 cages of 508 birds, 130 rabbits and 630 pigeon entries, which ranks it among the leading shows of the state.

Essex County boys and girls, members of the Essex County Boys' and Girls' Poultry Club won 12 first, 10 second, 6 third and 1 fifth prizes in competition with the adults in the poultry division.—A. K.

Have Rhubarb Pie This Winter

LOVERS of rhubarb pie and rhubarb sauce need no longer wait until spring to enjoy these favorite desserts. Science has shown us a means of having rhubarb all winter long that is within the reach of every gardener if this fine product is wanted during the long winter months. Quick action will be necessary, if advantage is to be taken of this method this winter. The rhubarb roots are to be dug before the ground freezes and left uncovered until they are thoroughly frozen. This freezing is necessary for otherwise the roots will not sprout. They must not, however, be allowed to thaw and then freeze again.

A portion of the roots may be covered with hay or straw to prevent alternate thawing and freezing, and the rest may then be taken into the cellar or some suitable place for forcing. For ordinary forcing in winter, the roots are placed in either sifted coal ashes or sand. The crown is put about 2 inches below the surface, after which a thorough watering is made. The plant is thereafter kept in a moist condition.

Best results will be obtained if there is no light, for under such conditions a crop of long, reddish shoots with small yellow leaves will be produced. The ideal temperature for forcing rhubarb is between 50 and 55 degrees. If the cellar is kept warmer than this, spindly shoots will be produced.—A. K.

Eastern Exhibitors Take Many Prizes

Junior Exhibits Have an Important Place at International Livestock Show

By W. H. TOMHAVE

THE 1927 International Livestock Exposition surpassed all previous shows from the standpoint of quality of the livestock on exhibition. Weather conditions were ideal with the result that more country people attended than at any time in the history of the show. Breeders of beef cattle, sheep and horses reported more actual sales and more inquiries for breeding animals than any time during the past ten years.

Meat Exhibit Attracts Attention

The International is becoming a great educational institution because of the scope of the exhibits and the added educational features provided each year. The exposition not only features the livestock show but much space is devoted to the hay and grain show and the exhibits put on by the United States Department of Agriculture, state colleges and experiment stations, featuring the results of experimental work. The meat exhibit of the National Livestock and Meat Board is another feature that attracts a great deal of attention. The steer exhibition by the boys and girls in the junior feeding contest has grown from a small beginning a few years ago to a large part of the show and many of the entries excel the individuals exhibited by the adults.

In addition to exhibiting calves, swine and sheep, a junior judging contest is held each year. Twenty-two states were represented in this contest and first place was won by the team from Oklahoma. The eastern states were represented by teams from Pennsylvania, Virginia and West Virginia.

Two inter-collegiate judging contests were held, one in judging all classes of livestock and one team judging meat. Twenty-two teams participated in the livestock judging contest and twelve colleges had meat judging teams. Pennsylvania was twentieth in the general contest and seventh in the meat contest. Both contests were won by teams representing the Iowa State College, Ames, Iowa.

The single steer show was the largest and best that has ever been held. The Aberdeen-Angus and Hereford breeds were represented by the largest number of entries followed by Shorthorns and the grades and crossbreds. All the single-steer classes were judged by Walter Bigger, of Scotland, who had the honor of judging for the third time at the International. The grand champion steer was a senior calf, a crossbred Shorthorn-Aberdeen Angus, exhibited by the University of California. This is the third time this coveted honor has gone to this institution. The champion Aberdeen-Angus steer and reserve grand champion was exhibited by the University of Illinois. The champion Hereford steer was exhibited by the St. Armour Co., Mortonville, Pa., and the champion Shorthorn came from the University of Alberta, Manitoba, Canada. The three leading beef breeds were represented by approximately the same number of cattle on exhibition. The quality and uniformity of the Aberdeen-Angus exhibits was one of the features of the show. This was especially noticeable in the aged bull class and senior and junior calves.

Grand Champion Hereford Bull owned by St. Armour Co., Mortonville, Pa.

Both East and West Win Honors

The grand champion bull was Revolution 7th, exhibited by Harrison and Ryan, of Harlan, Iowa. The grand champion female was Glencarnock Jessie 9th, exhibited by Briarcliff Farms, Pine Plain, N. Y. In the Hereford division the grand champion bull was Buck Avalanch, exhibited by St. Armour Company. The grand champion female was Laura Maitland, exhibited by J. N. Camden, of Versailles, Ky. The grand champion Shorthorn bull was Loyal Browndale.

Can the Family Keep the Home Farm?

By STEWART ANDERSON

WE HAVE already described why modern life insurance, as issued by legal reserve companies, is sound, and have described the chief difference between the stock company and the mutual company, saying that either kind is safe beyond the slightest question. And now we will proceed to lay before you some of the things that life insurance is doing for a host of farmers. We will divide them into three sections:

Protection for the family.
Education of the children.
Investment and accumulation for old age.

The first thing that life insurance suggests is what is called a Clean-Up policy. If you should go today it is very likely that you would leave some unpaid bills, some machinery and equipment installment obligations, some unsecured note at bank, perhaps some other things, and there would be the expenses of your last illness. These things would have to be paid promptly and from free money if your wife and family were to have a chance to start clean in their new problem of life. They would probably have all they could do to make a comfortable living from the farm, without carrying the burden of debts that it might take years to pay. A Clean-Up policy would immediately wipe out these debts. And there should be included in it enough money to keep the family going for at least a few months.

The next thing to be considered is the mortgage. You, with your brains and labor and experience and credit, would be gone, and your family must carry the load. Could they meet the interest? Could they meet the installments if the mortgage calls for installment payments? In very many cases they could not. So life insurance is taken to provide the money to wipe out the mortgage or heavily to reduce it, immediately after the husband and father has gone.

Term Policy Rate Is Lowest

There are two mortgage policies which meet this need. One is called a Life policy, and the other is called a Term policy. A Term policy provides that if the insured dies within a given number of years, the policy will be paid. At the end of that given number of years, the insurance comes to an end. The rate on the Term policy is the lowest that life insurance knows, the reason being that the risk of the company is limited, for it may not be called on to pay the policy at all.

If your situation is such that you cannot take one of the permanent forms, Life or Endowment, or if you already have a sufficient amount of that kind of insurance, and all you need, or all you can pay for, is a Term policy, that is the kind to take.

You can have a Term policy that will supply the money to pay off the mortgage if you die while the policy is in force; that will pay you a monthly income if you become totally and permanently disabled before the age of 60 or 65, and that also will relieve you of all further premium deposits, and that at your death, while the policy is in force, will pay your widow the full amount of the insurance.

Such a policy would clean off the mortgage if you died or, if you became disabled, the income from it, until the policy expired, would be more than enough to meet the interest charges and the taxes. If your mortgage is for $5000, and you are paying eight per cent, the interest would be $400 a year. A $5000 Term policy would give you a monthly income of $600 a year if you became disabled. You would receive this income until the Term policy had expired.

If you can take a Life policy you will be doing far better. A Life policy is payable at your death, no matter if you live to be a hundred. If you become totally and permanently disabled before age 60 or 65, the income is lifelong, and the premium deposits immediately stop.

Comments on the Week's News

THE opening session of Congress began with the expected exhibition of fireworks on schedule time. Writers who have been short of material for some time will no doubt welcome this prolific source of news. After the reading of the President's message, Senator Norris, Nebraska, offered resolutions for the immediate exclusion of William S. Vare, Philadelphia, and Frank L. Smith, Illinois. The pillorying speech in support of the resolution pictured the political conditions in Philadelphia in such colors as should make the voters of that city blush with shame.

✦ ✦ ✦

The President's message was written in straightforward language. In it he dwelt on farm relief, tax reduction, national defense, flood control, lynching, American Indians, the tariff, aviation, the Philippines, and other topics of national interest. In view of the widespread propaganda put out by some big business organizations for extreme reduction in taxes, the President's paragraph devoted to this subject is repeated in full below:

✦ ✦ ✦

"If special interests, too often selfish, always uninformed of the national needs as a whole, with hired agents using their proposed beneficiaries as organs of propaganda, are permitted to influence the withdrawal of their property from taxation, we shall have a law that is unbalanced and unjust, bad for business, bad for the country, probably resulting in a deficit, with disastrous financial consequences."

If that language does not get thru the skin of those who have been most active in demanding great reductions in big incomes and excess profit taxes we believe nothing will.

✦ ✦ ✦

Probably as an answer to those who have been threatening to demand a reduction in tariff rates if proposed farm relief measures are not adopted, the President says that agricultural products are now well protected by the tariff, while all that the farmer buys is on the free list. For this reason, he claims, any lowering of tariff duties would but increase the troubles of agriculture. It is his belief that cooperative marketing methods, properly financed, will take care of the surplus problem, together with methods of suiting production to market demands.

✦ ✦ ✦

Another item of news which developed on the day Congress convened was in relation to the President's cryptic statement, "I do not choose to be a candidate." In his address to the Republican Committee he said: "My statement stands. No one should be led to suppose that I have modified it. My decision will be respected." That should settle the matter finally. The most ardent partisan supporter should take the hint now that President Coolidge will not be a candidate in 1928.

✦ ✦ ✦

It now seems certain that New Jersey voters will have a list of three Republican candidates at the primary next year from which to select a U. S. Senator. The advent of former Senator Frelinghuysen into the race will add spice to the contest. Frelinghuysen was defeated before because of his dry stand. This time he will attempt to avoid that issue by favoring a state referendum on prohibition.

✦ ✦ ✦

The California bankers are considering a plan of credit control which will tend to prevent the over-planting of vineyards and orchards. They realize that when producers are hit by low prices resulting from over-production, the banks suffer with the producers. Since credit is necessary in nearly all lines of agricultural production, bankers could perform a good service by keeping themselves well informed along these lines and discourage the tendency to over expand by withholding credit where and when expansion is not warranted.

Racing in a Treadmill

RIDING on a merry-go-round, or tramping in a treadmill, may give one the sensation of traveling, but they don't get you any place. According to the statements recently made by men in a position to know, that experience is being paralleled in a good many lines of business just now. Merle Thorpe starts an editorial in "Nation's Business" for December with the following sentence:

"The business man of today has to run, like the devil in order to stay where he is."

He explains man's willingness to do this by comparing the modern spirit of business to the spirit which has always animated explorers, pioneers and big game hunters,—the spirit which impels man to do big, dangerous things even when there is no profit to be expected.

Mr. Thorpe does not mention farmers in his article but he might well have included them. In fact, if we accept the data on agriculture given out by close observers we will conclude that farmers are running just as fast as the business men and many of them are not even staying where they are. But we can ascribe just as high inherent motives to them for staying at it as Editor Thorpe credits to business men. Like them, farmers are buoyed by hope, by the lure of the game, and by the love of their homes and farms.

Shifts in Butter Making

ABOUT three times as much market butter is now manufactured in creameries as is made on farms. It is only about twenty-five years since the reverse was true. Creameries now produce about one and one-half billion pounds annually, while only one-half billion pounds are marketed from farms. Another interesting shift in the dairy industry as reported by the Bureau of Dairy Industry is that the North Atlantic States which twenty years ago manufactured twenty-six per cent of all the creamery butter made have dropped in production to about two and one-half per cent. This is due to the fact that the growth of city consumption has been so great as to require practically all the milk produced in that region. The North Central States now make most of the butter, but if the demand for milk by the big cities of the East continues to grow, and if eastern production is not increased, the transportation of milk from Wisconsin and adjoining states may force the manufacturing of butter into other sections.

Storage Eggs Must Be Stamped

GOOD eggs put into cold storage and properly kept remain good for a considerable time. Egg producers no longer fight the cold storage business. They realize that it tends to equalize the price throughout the year, even though storage eggs prevent extreme high prices at some seasons. But Pennsylvania has a law which requires the marking of cold storage eggs as such. No dealer or retailer is permitted to sell storage eggs as fresh eggs, or to neglect the marking of the containers with the information that they are cold storage eggs. Not only must the containers be marked with this information but it is made the duty of the seller to state to the purchaser that they are storage eggs. The Bureau of Foods and Chemistry at Harrisburg is calling the attention of retailers and dealers to this law, and informing them that prosecutions will follow failure to observe the law. It has been discovered that a great many storage eggs have been coming into the state from New York which are not so marked.

The Light Grows Brighter

AS THE year draws to a close farmers will be glad to know that the condition of agriculture in relation to other industries is improving,—at least on paper. That hypothetical thing, "the farmer's dollar," is growing and, if it keeps on, will soon be full-sized.

According to the economists, the farmer has been handling "short" dollars since 1919. That is, he was paid in 100-cent dollars for what he sold, but when he came to buy things the dollars were less by several cents. At least that was the apparent fact. The lowest value of the farmer's dollar was in 1921, when it was worth only sixty-nine cents when he paid it out. By 1923 it had increased only ten cents, or to a purchasing value of seventy-nine cents. During 1924, 1925 and 1926 it hovered around in the eighties, and was still there the first half of 1927. But October of this year saw it reach a value of ninety cents, and the estimate for November shows it has climbed to ninety-four cents. In other words, the farmer comes within six cents of trading even when he exchanges his labor and products for the products of other industries.

This rise in comparative values results from the lowering prices in other lines, rather than in an increase in prices of farm products, but this makes the matter just as broad as it is long. This decrease in the price of manufactured articles seems to be a general movement, and has been sufficient in some lines to compel a reduction of wages. It has already reached a point where farmers may reasonably expect to get farm labor for somewhat less than has been demanded since the war. While it has been a long and hard pull to make ends meet in general agriculture, the signs of the times are that conditions are fast approaching an equilibrium, and that farmers will soon stand on the business level with those in other industries.

MOVE FOR FAIR TRADE

Bill Would Protect Against Price Manipulation—Dairy Chief Resigns—Fight Daylight Saving.

Washington, D. C.

THE business men of the country and the public are entitled to protection against misleading price manipulation, declared Senator Capper, of Kansas, and Representative Clyde Kelly, of Pennsylvania, in reintroducing their fair trade bill. The bill, while restoring to producers of trade-marked goods the right to make resale price contracts with distributors, provides that such commodities may be resold without regard to such agreements "in cases of closing out stocks, disposal of damaged goods, and of bankruptcy." The bill also expressly prohibits price agreement between producers, or between wholesalers, or between retailers.

Dr. C. W. Larson Resigns

The feeling is prevalent in Washington agricultural circles that the Department of Agriculture lost one of its most valuable and useful men when Dr. C. W. Larson resigned as chief of the Bureau of Dairy Industry to become director of the National Dairy Council. Dr. Larson has been chief of the bureau since its creation, July 1, 1924. He entered the Department of Agriculture in 1917 and from 1921 to 1924 was the chief of the Dairy Division.

Denounces Groups Asking Regulation

Groups of citizens who come to Washington asking for government regulation of all sorts of affairs were vigorously denounced by Senator James E. Watson, of Indiana, in an address before the American Mining Congress, who declared that there are 40 bureaus and commissions in the government whose heads are not elected by the people, and who cannot be reached by the people. "Too much of the annual budget is being expended in the maintenance of a centralized form of government. Government control is expensive. The tax burden may to a large extent be traced to the bulky organization, which attempts at increased government control have set up."

Says There Is an Electric Monopoly

In the event of the passage of the Walsh resolution for an investigation of the alleged power trust, Gifford Pinchot, former governor of Pennsylvania, says he is prepared to submit facts which he believes furnish definite proof of the existence of an electric monopoly. Forty-one corporations control four-fifths of the electric energy produced in the United States, according to Mr. Pinchot.

Will Have Nitrogen Fixation

The United States will have some time in the future a nitrogen-fixation industry, according to Dr. A. J. McCall, of the Bureau of Chemistry and Soils. In fact, he says that gratifying progress has been made in nitrogen fixation methods, which promises increased supplies of agricultural nitrogen from the air fixation process.

Home Economics Ranks Second

Home economics ranks next to agricultural economics in number of projects under the Purnell fund. There was some increase in projects in rural sociology, and substantial progress was made in developing the methods of research in this field.

Fewer Cattle Will Be Fed

All reports indicate that fewer cattle will be fed this season than last, both in the Corn Belt and the far West. In the case of lambs, the inspections recorded 300,000 fewer head than last year going into Corn Belt feed lots. Colorado and western Nebraska will feed double the number of last season.

Differ on Educational Activities

One point on which the President and the farm organization representatives differ widely is his advocacy of the establishment of a Federal Department of Education, in which all the educational activities of the government can function under one directing member of the Cabinet.

Oppose Daylight Saving

A bill which the farm organizations are preparing to oppose provides for a national daylight saving law. Wherever the daylight saving plan has been in operation it has been opposed by farmers, who look upon it as very objectionable from every point of view. It is now looked upon as a matter of too great interest to farmers to be permitted to come before Congress without a vigorous fight in opposition.—E. E. R.

FEATURE POTATOES

State Champion Will Show Pyramid—Apples Inspected in Five Counties—More Schools Merged.

Harrisburg, Pa.

A HUNDRED thousand potatoes all grown by one man on one acre in Lancaster County will be exhibited in a pyramid at the January State Farm Products Show according to an announcement just made at the State Department of Agriculture. The potatoes are to be shown sacked with the mouths open. The exhibit is to show what Amos Eberly succeeded in doing to win the title of state potato champion. He grew 651.4 bushels on one acre. In addition to this exhibit there will be honors paid to 172 persons who grew over 400 bushels on one acre. The pyramid will be the first of the kind to be made up here and claims are made it will be unprecedented in American agricultural exhibits.

No Wart Reported

Preliminary reports on the survey of potatoes this year indicate there has been no potato wart and that general conditions are more satisfactory than they have been for years. Inquiries have been made at the Capitol from other states as to experience with blight and other diseases and there is considerable pride that no wart is reported.

Borer Rules Made

During the winter Agricultural Department men will call attention to the regulations for the corn borer which will quarantine thirty-four counties entirely and parts of eight more.

Are Studying Values

State administration plans for getting down to hard pan in regards to the basis for distributing state money for education have been extended by an announcement by Superintendent John A. H. Keith in which he makes known that several men are engaged in a survey of true values of property. The inquiry will go into many parts of the state and sales of city and farm land will be checked up. The study will be expanded later on and is expected to be the most important step in regard to school appropriations as it will be related to the study launched recently by the State Council of Education and that arranged by a legislative commission.

Inspect at Thirty-two Points

State inspection of apples was conducted at thirty-two points in five counties this year according to state inspection service men. This work covered inspection of 537 cars, which was smaller than last year due to the crop conditions. Most of this inspection was done in lower tier counties.

More Consolidating of Schools

State educational officials say the coming year may be notable because of the manner in which projects for merging of schools are maturing. Extensive consolidations are being considered in eastern counties especially.—T. C.

NEW CLASS DEVELOPED

Poultry Certified for Meat—Protest Act Abolishing Five-eighths Basket—Grange Gains in State.

Trenton, N. J.

SALEM COUNTY holds the distinction of being the foremost section of New Jersey on the development of a new classification of poultry certification, now being featured under the caption "Approved Meat Production." The state has certified 10,000 fowls in Salem County under this classification, while Cumberland County next door has about 4000 birds entered in the same way.

Hold Show and Meeting

In conjunction with the annual meeting of the Somerset County Board of Agriculture at Somerville on December 3, the county staged its annual Corn and Apple Show in the court house. In point of entries and quality of corn and fruit entered, the exhibit this year surpassed former events.—W. H. B.

Protest Standard Container Act

Granges in the counties of Gloucester, Camden, Burlington, Salem and Cumberland, in cooperation with the leading canning interests of the state and the South Jersey Farmers' Exchange, Woodstown, have registered a protest against the passage of the Standard Container Act which prohibits the manufacture of the five-eighths basket. This package is universally used throughout the tri-state tomato territory and its discard is estimated to work a hardship on the growers and farmers of this district. Under the federal plans a new 24-quart basket will be made to replace the 20-quart basket. The motive back of the change is to standardize all packages into units of eight quarts instead of 4 quarts.

Staged Poultry Exhibits

The New Jersey Experiment Station staged an educational poultry exhibit in connection with the Gloucester County Poultry Show, Gloucester, on December 8th. Interest in poultry in South Jersey was demonstrated with a record established in the number of entries received, with many applications turned down on account of a lack of space for the birds.

Placing Loans to Club Boys

The Frelinghuysen Club Fund of the New Jersey Department of Agriculture is placing a number of loans in Salem County in the near future most of which go to pig owners. A recent check-up in Salem County shows that 40 club boys in this county own over 400 head of swine which, according to the 1925 census, is about 10 per cent of the hog population of the county.

Grange Grows in New Jersey

Grange growth in New Jersey shows a gain over the previous year. The year shows the addition of one new Grange and the reinstatement of two others. A big gain in membership for the state as a whole was reported.

FEW FARMERS PAY CASH

Most Feed Bought on Credit—Silos Introduced into Country in 1876 by New York Man.

Ithaca, N. Y.

A SURVEY of 109 dairy farms of New York State shows that only 17 per cent of the farmers pay cash for the feed they buy. Those who buy on account pay 14 per cent interest, all things considered. Experiments also show that 50 cents' worth of acid phosphate added to a ton of manure makes it worth two tons of manure in plant feeding value.

History of Silo Recalled

The death of Mrs. Ida C. Brown, 84 years old, widow of James R. Brown, of Peekskill, N. Y., a plow manufacturer who introduced the first silo into this country, recalls the fact that silos, though now in general use, have had a short history. In 1876 Mr. Brown translated a treatise from the French telling of that country's use of the new device to preserve green fodder. He induced a Maryland farmer to build the first silo in this country. It seems impossible that this was but a generation ago.

Road Building

According to recent figures compiled by the United States Department of Agriculture, Pennsylvania stands first in its expenditures for state roads with more than $53,000,000 spent on state highways, and New York is next with an expenditure of $37,000,000. North Carolina is third, followed by Ohio. These figures do not include money spent by towns and counties for roads. Nevada, with only a million and a half spent for roads, has spent seven times per capita what New York has.—M. G. P.

County News and Comment

Frederick County, Md.—Weather warm and mild during November but winter seemed to begin in earnest with December. Corn is nearly all husked but some still standing in shocks. A lot of corn was soft and only partly matured. Pasture held out good. Grain is looking fair for the most part but some places seems to be hurt some by the fly. A lot of fall plowing has already been done. A few farm sales have been held recently. Machinery selling low but cattle extra high. Hay is impossible to get. Wheat, $1.35@1.40; corn, 70@75c; hay, cheap, $9 for the best; eggs slightly lower, 45@50c; pork, 13c; steers high, 9@9½c.—H. J. W., Dec. 5.

Jefferson County, Pa.—November has been an ideal month for doing up farm work and getting set for an early start next spring. December is starting out quite cold with just a little snow. Dirt roads are rough and hard to travel. Most of the potatoes and buckwheat has been loaded and shipped. More good purebred livestock is being kept and club boys and girls as well as their fathers are receiving more pleasure and profit taking special care of this stock. Hay was a very large crop in the county this year and is moving slowly around $16 per ton. Straw selling at $12. Potatoes were mostly loaded around $1 on the car. Most everyone is butchering. Buckwheat cakes and sausage is on the menu now. The Buhl milk plant in Brookville will be a very good market for farmers having milk testing high in butterfat. Jefferson County is becoming more popular as a Hereford shire center. There have been many sales to breeders to all parts of the country this fall. A few bears and a great many deer are being brought in by hunters. A large number of deer were shot by farmers before hunting season opened because they were destroying the buckwheat and corn crops. A few prices: potatoes, $1@1.10; buckwheat, $1.50 cwt.; oats, 50c; pork, 15@16c, dressed; butter, 50@55c; eggs, 55@65c. Some things we buy: coal, 30@10c bu.; gasoline, 22c; bran, $2 cwt.; middlings, $2@2.60 cwt.; corn, $2.15 cwt.; beef scrap, 50 per cent, $4.50; flaxseed, 12 per cent, $2.75.—F. A. M., Dec. 5.

Union County, Pa.—Very many men have gone to the woods and mountains to hunt deer which are reported very plentiful and doing damage to farm crops along woods. There was very little stir among buyers for potatoes this fall and apples were not asked for by as many buyers as a year ago. Corn is about all cribbed and was a fair crop in spite of the poor seed and unfavorable start in the spring. Nearly all corn stover is in the fields as it has been too wet or heavy to mow in barns to keep. Some sod has been plowed for corn. Cattle had been on pasture until yesterday when it snowed. For the first time in many years no milk cows were shipped into the county for wintering although hay, stover and straw are plentiful on most farms to care for more stock. A few farm sales were held in the county when cows sold entirely too high for grades. Fat hogs are being marketed or killed for the family pork for the year, but the price of pork has made a big drop the past six weeks. The county farm products show will be held in the Mifflinsburg High School gymnasium on December 28 to 31st. The county Bankers' Association has furnished the money to buy four good Holstein bulls for service, when the two car loads of Holstein heifer calves brought to the county in May are old enough to be bred. Four bull associations will be formed. Prices: wheat, $1.25; oats, 46c; new corn, 80c; apples, $1@2; potatoes, $1@1.25; eggs, 60c; chickens, 22@24c.—J. N. G., Dec. 3.

Westmoreland County, Pa.—Farmers surely have no complaint to make about the weather this fall. It has been very favorable for getting fall work done. Most farmers are done or nearly done husking corn in some parts of the county. Corn is reported as being a fine crop this fall. Potatoes were a fair crop, selling now at $1.50. Winter wheat looking good, some farmers have done some spring plowing. Eggs seem to be scarce just now and high in price, 80c; butter, 60c; apples, $1.50; poultry, 26c; corn, 60c; wheat, $1.10; oats, 60c.—L. C., Dec. 1.

TIGHT BINDING

For the Land's Sake!

Put Richness Back in the Soil!

ALL MEN who have made good money at farming have been very careful to keep their soil fertile and rich. There are poor years and good years in farming but the man who puts manure on his fields in the right way will reap real profits.

The McCormick-Deering Manure Spreader is one of the most valuable machines on the farm. It increases yields, pays for itself in a hurry and goes on building bank accounts.

It spreads smoothly and evenly, putting on just as light or as heavy a coat as you want. The pitchfork method of spreading cannot equal the yields that follow the McCormick-Deering. That has been proved many times. Besides hand spreading is hard work; the McCormick-Deering saves many hours of time and much hard labor. Its good strong beaters tear the manure rapidly and spread it well beyond the wheels. Ask the local dealer to show you the McCormick-Deering Spreader and explain its mechanical features.

SKUNK

We want 50,000 good fresh caught skunk, mink, raccoon, opossum, fox and muskrat skins. We buy skunk in four grades. For dealers and trappers write.

JASPER POTTS, Wellsburg, W. Va.

SINCE I wrote a rather full account of our poultry experiences up to date for last week's issue, page 1e, I shall not repeat it except the result for November. The number of eggs laid by the 239 pullets last month was 4176, or 373 dozen. This was a production of 63.7 per cent. Most authorities agree that it is a dangerously high percentage for young birds. In fact, three have died while apparently in good health, probably from indigestion.

✣ ✣ ✣

WIFE and I spent the week-end last week as the guests of a member of the Doe Run Farmers' Club in Chester County. Here is an unspoiled farmer neighborhood. It is somewhat off the beaten track of travel and farmers have retained those qualities which make the real farm neighborhood so delightful. The club meeting was held at the home of our hosts and was a most delightful affair. Aside from the sumptuous lunch and the enjoyable social mingling, the discussion of timely subjects showed the members to be up on all live topics. They are real farmers having correct ideas as to home making and neighborhood building.

✣ ✣ ✣

THE truth of the latter statement is borne out by the concrete example of the centralized school at Unionville, the largest and best equipped rural school of its kind in the United States. The area covered by the district embraces four townships, and the pupils number over 700. A four-year high school is conducted, in which two years is devoted to industrial and manual training, including domestic science. Thirty teachers are employed. Eight of the twenty school directors are women who are elected because of their fitness for such work. The community is fortunate in having the financial and moral backing of a rich man, a Mr. DuPont, who has helped to make it possible to create such an educational plant. And the best of it is he lives "hereabouts to boot!"

✣ ✣ ✣

WE attended the community production show held in the gymnasium on Saturday evening. The spacious room was well filled with exhibits from farm, home and school and they did credit to Chester County's reputation as a great agricultural county. Many of the exhibits were generously donated their prize winning specimens to be sold to help pay the expenses of the exhibit. The big school auditorium was well filled with men women and children to hear a short program, the chief feature of which was an illustrated lecture by Dr. E. M. Gress, of the Department of Plant Industry, Harrisburg on weeds and wild flowers.

✣ ✣ ✣

IT is said that about ninety per cent of all the mushrooms produced in the United States are grown in southern Chester County and part of Delaware County. Many farmers grow them in addition to their general farming or dairying, and some people make mushroom growing their chief business. Like eating oranges in Florida or oysters in Baltimore, one must go into the Kennett Square district if one would know mushrooms at their best.

✣ ✣ ✣

ONE of the features which make our visiting in this section enjoyable is the fact that some of our fellow Clearfield countians live here. There are the two Wrigley families and Charles E. Patton, altho "Charley" was up in Clearfield on a hunting expedition at this particular time. Added to this is the fact that Mrs. Kester always finds some new relations in this section. One of the branches of her family,—the Moores,—moved from here over a hundred years ago and went to Clearfield County. And since she has a two book family genealogy, there is a lot to talk about and much to look up in her big books when she gets home.

The Cheerful Plowman

Sounds at Night

MY NEIGHBOR Johnson wouldn't rise when he heard sounds of mighty size proceeding from his shed. "Tomorrow morning I can see what's up out there, I can," said he, "but now I'm snug in bed!" Next morning he went out to find a heifer choked till she was blind, all tangled in her rope! "Why did I not get up?" he cried, "that poor, poor bossy might have died! I'll change my ways, I hope!"

My neighbor Olson heard a sound, alarming, raucous, sharp, profound, which came from Dobbin's barn; but Olson was in bed, of course, and did not rise to aid the horse,—this is a common yarn,—but when he rose at break of day poor Dobbin's life had slipped away, poor Dobbin he was dead! He needed aid at half past two, not when the night was done and through— but Olson stayed in bed!

My neighbor Swanson heard a whoop resounding from his chicken-coop at one o'clock at night, but Swanson said, "'Tis nothing much, that rooster squawks to beat the Dutch without a toe in sight!" When he arose at six o'clock he found a weasel in his flock, dead birds on every side. "Oh why, oh why, was I so dumb, why did I not jump up and come? I'm such a drone!" he said!

Well so it goes with every man of Johnson-Olson-Swanson plan, such policy is bad, for how can any fellow know what's up when livestock in a row squeal nightly, loud and sad! My plan is this: when squeals arise, no matter when, I bat my eyes and hurtle from my cot, "Old Jasper may be sick," I say, "and may not live till light of day unless I'm on the spot!" "Old Buttercup may need my aid if she's to live and make the grade," I say when she complains, "so here I go with all my power regardless of the time and hour. I must relieve her pains!"—J. Edw. Tufft.

Friendly Talks

By Edgar L. Vincent

OFTEN when I am about my farm work I like to look up and see a beautiful elm tree that stands in one of our fields. This elm rises fifty or sixty feet skyward and with its mammoth trunk and wide-spreading branches it is one of the landmarks of the farm. I have no means of knowing how old this tree is, but it was there when we bought our place in 1889. They tell us that sometimes such trees reach the age of a hundred years or more, and from its appearance I have no doubt that our graceful elm is well nigh a century old.

Sometimes when we are plowing the field in which our elm stands I am surprised to see how far out the roots run in every direction. Some one tells us that he found roots of an oak tree sixty feet from its base, and it seems to me we have pulled out roots of our elm as far as that. It is wonderful what a root system such trees have. We can see why this is so, for with such a growth of trunk and limb, the strain must be terrible in time of storm. If it were not well fortified, it would surely go down.

Are Builded for Stormy Weather

As I have thought of our lovely elm tree, I have in my fancy compared it to the life of a good man. How such a man towers up in the midst of his fellows! So commanding in his appearance! So strong in his utterance! When he speaks men listen. Not all men are so. Like many trees, their root system seems very small in comparison with that of the oak or the elm. And they do not stand as long. Soon they fall, swept from their places by some tempest. They go down because they have such slender hold on the earth out of which they grow. Fair weather trees these seem to us. But oaks and elms are builded for stormy weather.

And so are good men. And they send the roots of their influence far out in every direction. It seems to be characteristic of men that they want to leave something behind them to perpetuate their memory. So they build monuments; they construct temples; they raise pyramids in the desert; but these at last crumble and fall into dust. But the good things men do outlast time.

You can think of men who lived so good, so strong, so true that their influence upon the lives of others is an enduring monument to their memory. We cannot forget the kindnesses men do us. Like the elm tree roots they stretch on and out. God only knows how far.

They Influence Lives

And we cannot get away from the influence of such lives. Sometimes we think we have. Changes come to us that lead us hundreds of miles away from the place where we knew these strong men. Busy with new cares and different experiences, for a time it seems as though we do forget these men altogether. Then suddenly they rise up before us again in thought. Some word they spoke in the long ago, some kindly deed they did for us or for someone we knew returns like a bird winging its way from heaven, bringing with it a message that stirs our hearts and leads us to newness of life.

Towers and monuments, pyramids and temples vanish. The good men do live through time to eternity.

And do we not find something inspiring in this? What is to prevent you and me from being oak tree or elm tree men? That is God's plan for every one of us. He does not like any man to go down before the blast of evil. Far rather would He see us living for eternity. And if we will let it be so, He will use all His love, all His power, all His grace that it may be so. How can we disappoint Him?

BULLETIN

Weekly Milk Records on 10 Cows for 42 Weeks

Research Farm—Dr. Hess & Clark, Inc., Ashland, Ohio

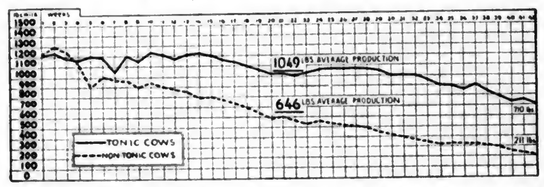
These five ordinary-grade cows were on pasture in August when they freshened. In September they received a common dairy ration of ground oats, corn, bran and oil meal. Beginning October 1st Dr. Hess Improved Stock Tonic was added to their ration and they were placed in competitive test with the five cows opposite.

These five cows are as nearly like the cows opposite in grade and condition as possible. They freshened in August and received the same ration and care as the others. In September they gave more milk than the cows opposite. After October 1st they were continued on the same feed but did not receive Dr. Hess Improved Stock Tonic.

We give below a graph showing the milk production by weeks of the above two groups of cows. Follow carefully these two lines which tell a very interesting story. They demonstrate the effect of Dr. Hess Improved Stock Tonic on milk production.

Remember this is purely a comparative test between two groups of ordinary dairy cows, both receiving an ordinary dairy ration, and ordinary care. No effort was made for high production.

Note: The cows in both groups were on pasture until the end of the tenth week. Returned to pasture at the end of the 36th week. In the meantime ensilage and hay were substituted.



OBSERVATIONS—In the above graph note a sustained milk production by the Tonic cows. These cows started at 1209 lbs. per week and averaged 1049 lbs. for the 42 weeks. During the same period the non-Tonic cows averaged 646 lbs. per week.

While the non-Tonic group decreased in their production at a normal rate of approximately 9% per month the Tonic group lost approximately only 3% per month.

As a result of this sustained production the Tonic group gave 16,900 lbs. more milk than the non-Tonic. Tonic used cost $22.50.

The non-Tonic group were irregular eaters, off their appetites occasionally, four of the five cows were gargety at times.

The Tonic group were regular eaters; steady every-day producers. While associated with the other cows in the barnyard and pasture, not one of these five showed any symptoms of garget.

Dr. Hess Improved Stock Tonic

APPETIZER—REGULATOR—MINERAL BALANCE—*all combined in one product*

Vegetable Growers Get New Ideas

I WISH more of our readers might have participated in the fourth annual Horticultural Week held at State College, Pa., November 28-30th. There were lively meetings covering every phase of horticulture, vegetables, fruits and ornamentals. Informal discussions were always in order with growers taking the lead in many of the meetings.

Monday evening Doctor Fletcher, head of the Department of Horticulture, entertained the visiting growers at his home. Tuesday evening was given over to a "feed" in one of the rooms of the Horticulture Building. Representatives from several of the student musical societies added their efforts in making the occasion most enjoyable.

"What Is New in Horticulture, 1927," was the title of an exceedingly valuable 20-page folder supplied to all guests. "Conceived in the spirit of service" this folder is a little reference library in itself, reviewing briefly important publications and developments.

Practical Results Reported

Among the very practical things reported is the work of an investigator who found that large kernels of sweet corn produced larger and stronger seedlings than small kernels and that the plants from the large seeds kept their advantage, maturing a crop five days earlier than plants from small seeds. Moreover, there were fewer barren stalks, more two-eared stalks and greater uniformity where the large kernels were planted.

Another reference reports injury to the sprouts of germinating beans when certain fertilizers were used in or above the row. Unquestionably the only safe thing to do when using large applications of commercial fertilizers before planting is to broadcast and harrow in thoroughly. I have applied two tons per acre in this way without injury.

Reference is made to Ohio experiments in which yields of greenhouse lettuce were increased by using complete fertilizer in addition to manure. It is suggested that "On many soils the amount of manure ordinarily used may be reduced by one-half if 1000 pounds per acre of 3-12-4 or similar complete fertilizer is used."

Perhaps some of our readers have seen the plots at our own State College on which experiments are being conducted in the fertilization of cabbage, early potatoes and tomatoes in a four-year rotation. The results of ten years' experiments are summarized as follows in "What's New in Horticulture": "All crops showed great gains for phosphorus up to the largest amount used. Nitrogen produced gains in yield of cabbage only; potash in small amounts increased the yield of all three crops to a small extent."

Give too Much Protection

I believe nearly all of us are inclined to give too much protection to stored vegetables. During a warm fall such as we have just experienced it is hard enough at best to keep temperatures in celery trenches, cabbage and root pits and in storage cellars as low as they should be. It is hard to resist the temptation to fortify heavily against Jack Frost. The last two nights temperatures dropped to 16 degrees F. The window to my storage cellar stood wide open both nights without reducing the inside temperature below 35 degrees F. That may seem remarkable but is easily explained by the fact that the earth floor and heavy earth banked stone walls were at relatively higher temperatures and were capable of warming vast quantities of air. Later in the season when the walls and floors are colder an open window at 16 F. might mean trouble.

Likewise buried cabbage and root crops have so far been given no other protection than that afforded by four inches of soil. A five-inch snowfall before those cold nights has kept all frost out of the ground. I am sure litter applied at this stage would be likely to result in too high temperature. When the ground over these crops freezes additional cover will go on. Not before.—Gilbert S. Watts.

He Took the Championship Again

LAST year's wheat and oats "champ," Herman Trelle, of Wembly, Peace River, Alberta, Canada, succeeded in retaining one of his crowns this year. This Idaho-born civil engineer homesteader living seven hundred miles north of the Montana-Alberta international boundary last year was made a double champion when he won both titles at the International Livestock Exposition and Hay and Grain Show held at Chicago.

The wheat championship was wrested from him this year by C. Edson Smith, Corvallis, Montana, but Mr. Trelle grabbed off the oats title for the second time.

In spite of being located 700 miles north of the boundary, this young farmer and his wife and children enjoy farm life with practically all the comforts of city or rural existence anywhere else. He farms with a tractor. The land on which the championship samples were produced being summer fallowed, harrowed twice in the spring, seeded, packed and double harrowed again before seed comes through the ground.

Mr. Trelle operates three hundred and twenty acres. He has a full line of farm implements and is an enthusiastic modern power farming advocate.

HORTICULTURE

DR. S. W. FLETCHER, Editor
Head of the Department of Horticulture
Pennsylvania State College

Hort Week Attracts Many Visitors

(Continued from last week)

FOLLOWING are some of the points brought out at the Fourth Annual Horticulture Week at the Pennsylvania State College, November 28-30th.

Professor F. G. Hechler, of the School of Engineering, says that the following materials have equal insulating value, in the construction of the walls of a storage or other buildings:

Six inches of ground cork.
Eight inches of shavings.
Two feet of solid wood.
Seven and a half feet of brick or hollow tile.
Eight feet of concrete.

Soil is the cheapest insulating material, in below-ground structures.

At current prices the cost of materials to insulate 1000 square feet, one inch thick, are: cork board, $97; ground cork, $10-$15; various patented insulating materials, $60 to $135. Ground cork is cheap, and satisfactory provided the outside and inside walls are made absolutely water tight. Shavings and sawdust gather moisture.

It was reported that many retailers are hurting the fruit trade by the intentional mis-labeling of varieties. This is especially true in a short-crop year like 1927. Even Ben Davis is sold as Stayman. Here is a field of activity that our federal and state regulatory authorities could enter to advantage.

Two Sources of Nitrogen Equal

The results of four years' experiments in a sod apple orchard in Franklin County show a profitable response to applications of nitrate of soda up to fifteen pounds per tree.

In comparison of sulphate of ammonia and nitrate of soda, no appreciable difference in value has been detected, as yet. It is likely that these two sources of nitrogen will have sharp competition during the next few years from synthetic nitrogenous fertilizers such as urea, calcium nitrate and amo-phos. Probably these can be placed on the market at a considerably lower price per unit of nitrogen than either nitrate of soda or sulphate of ammonia.

Conflicting reports were made on the Golden Delicious apple. Apparently it bears early and heavily, and is of good quality and size, but tends to wilt in storage. Like the red Delicious, the time of picking this variety has a very important influence on its quality and storage value.

Spraying and Dusting Compared

Averaging the results of eight years' experiments at the college in a comparison of spraying and dusting for the control of apple scab, it was found that the standard lime-sulphur spray schedule has given 90 per cent control and dusting 72 per cent control for the eight years. This year, however, which was a bad scab year, dusting was as effective as spraying on certain of the experiment plots. Dusting has not controlled red spider at all while summer sprays with lime-sulphur help to keep it in check. The college continues to recommend spraying as the more effective practice. Under certain conditions, however, particularly in orchards on rough land, or where the water supply is inadequate, or labor very difficult to secure, and on varieties most subject to spray burn, dusting is worthy of trial to supplement spraying in orchards of large acreage. Spraying is still the standard method of controlling orchard pests; dusting is a special practice, applicable only under special conditions.

According to E. L. Nixon, in one county that he canvassed this fall, it was found that 10 per cent of the fruit growers produced 90 per cent of the apples that graded 88 per cent No. 1, or higher. It paid to be in the 10 per cent class this year.

W. S. Krout warns against planting red raspberries and black raspberries within 500 feet of each other, because the mosaic and other degenerate diseases are communicated from one to the other.

H. E. Hodgkiss advised against applying an oil spray at the delayed dormant period; the trees should be fully dormant or the buds barely cracking. Several orchards were seriously injured last spring, and some lost their entire crop, because of late spraying with oil. A drop in temperature the night after the spray is applied is dangerous. He reports no satisfactory method of controlling Oriental moth, and bears the discouraging news that this pest is attacking apples more freely; the past season some apple orchards had as high as 30 per cent infestation.

Box Pack Meets Western Competition

A survey of Pennsylvania city markets made by the Department of Agricultural Economics of the college revealed that the percentage of western boxed apples sold in these cities, in comparison with eastern-grown stock, is: Philadelphia, 51 per cent; Coatesville, 60 per cent; Reading, 25 per cent; Harrisburg, 14 per cent; Erie, 9 per cent; York, 5 per cent; the whole state, 34 per cent. The small amount of western boxed apples sold in York is due largely to the success of York County growers in meeting this competition by putting up an attractive box pack of their own.

The same survey showed that the total apple storage capacity of the state is 800,000 barrels, with an estimated commercial crop this year of 816,000 barrels. Last year 76 per cent of the storage space was used; this year but 26 per cent. The commercial apple storage business in Pennsylvania is not prosperous. The rapid increase in the number of farm storage cellars in Pennsylvania undoubtedly has had a depressing effect on the commercial storage industry.

Barrel Passing Out of Use

The bushel basket, or hamper, and the bushel box are the preferred packages in Pennsylvania apple markets. Several hundred retailers were canvassed and gave their preferences, as follows: basket, 47 per cent; box, 43 per cent; barrel, 7 per cent; bulk, 3 per cent. The barrel is rapidly passing out of Pennsylvania apple growing, except for export.

The installation of a small refrigerating plant on the farm in connection with the common storage is being seriously considered by many growers. The purpose of this refrigeration is to hold summer fruits, and to extend the storage season of a small quantity of late keeping varieties of apples into late spring. It may also be used to cool down fruit that is to be placed in common storage. There are a considerable number of farm cold storage plants in the Hudson River Valley, with a capacity of 1000 to 20,000 bushels. Some companies are making a specialty of small units which can take care of 500 to 1000 bushels of fruit. —S. W. Fletcher.

EVERY YEAR that we go on, raising inferior articles in an inferior way, we are incurring losses for ourselves and our children, and every advance that we make in art, science or pursuit, will redound to their advantage and our own.—From address delivered before the Northumberland County Agricultural Society, at Milton, on Wednesday, October 19, 1853.

"We have grown the *SAME CROP* on the *SAME FIELD* for 40 YEARS"

MAPES MANURES made it possible

ONLY those who use Mapes Manures can grasp the full significance of the Mapes slogan, "cost little more—worth much more." For Mapes results are so remarkable, so outstanding and beyond comparison, that you must see them to fully appreciate them. Yet such experiences as the following should be convincing evidence to you that Mapes Manures are in a class by themselves:

"It was over 40 years ago," says Mr. A. Lloyd Shults of Washington Boro, Pa., "that my father started to use Mapes Manures on a twelve-acre field of tobacco. We have grown this same crop on this same field for over forty years—each year using Mapes Manures and each year getting uniformly splendid results. The remarkable thing is that there has been no rotation on this field in all these years—tobacco after tobacco every year. The crop has always been so fine in quality that, all during this time, we have sold it to the same buyer and we have always gotten top prices—this year a premium of five cents a pound. This year's crop, in my opinion, and what is still more important, in the opinion of the buyer, is the best we have ever grown—in both quality and quantity."

Mapes Manures have always produced outstanding results because they have always been formulated on the basis of crop yield and quality. Two fertilizers of the same analysis may give widely different results because of the difference in the plant food materials from which they are compounded. Mapes Manures are first made right, then priced as low as possible. The little additional cost is returned many times over in bigger crops of better quality.

Just Mail this Coupon today

Try Mapes this year. Compare the crop yield, the crop quality and the crop profits with the results from any other fertilizer you can buy. Write today for a list of crop brands and prices of Mapes Manures. And remember, Mapes "cost little more — worth much more."

A Brighter Future

WE no longer plant by the light of the moon. . . . Agriculture has become a sound business, depending on the volume of its income, the same as any other business. . . . Fortunately, during 1927 conditions have been more favorable for the farmer. His income will probably be greater this season than last. He is looking into a brighter future.

By investing this increase in income wisely, he can make the most of the opportunity to build a sounder and more profitable business undertaking. Advisory groups and agricultural bureaus are available to help him, because they realize that the prosperity of the farmer is the basis of all true prosperity.

It is in accord with this general policy that the work of all departments of the N. V. Potash Export My., is conducted.

The Purina Quart is the Cheapest

Milk Pail Proof

Fingley Brothers, Harford, Pa., are making $172 per month more on 16 cows, since they began feeding Cow Chow.

At the Benj. Chew Farm, Radnor, Pa., ten cows made an extra net profit in one month of $51.90 on Cow Chow.

Robert Swingley, Lake Ariel, Pa., has 11 cows which made an extra net profit of $49.30 per month after he changed over to Cow Chow.

Geo. Frick, Myerston, Pa., found that Cow Chow increased the net profit $49.20 per month on his ten cows.

L. Herman, Deans Station, N. J., found that changing over to Cow Chow from another ration increased his net profit $18.30 per month on 9 cows.

Harvey Scott, Cranbury, N. J., has 16 cows that made an extra net profit of $32.00 per month on Cow Chow.

Brown Swiss Herd Has Enviable Record

THE November 12 issue of Pennsylvania Farmer contained a report of the Westmoreland County Cow Testing Association. The highest producing herd was that of John S. Wohlwend and his son, J. C., of Salina. Since this is a Brown Swiss herd—a breed not so numerous or well known as most other dairy breeds—a brief account of Brown Swiss cattle in general and the Wohlwend herd in particular may be of interest to the readers of Pennsylvania Farmer.

As the name indicates, the Brown Swiss breed originated in Switzerland. They are large, rugged animals, mature cows weighing approximately 1200 pounds. They are good grazers and will rustle a living on a hillside pasture that would discourage some other less active breeds. While somewhat slow in maturing they are long lived and continue their usefulness in the dairy many years. Until a few years ago they were considered dual purpose cattle hence they do not have the extremely refined dairy form noticeable in most other dairy breeds. The calves are strong and vigorous. The cows fatten readily for beef purposes when dry and they yield a liberal amount of milk of fair quality. According to the average advanced registry records of all cows tested by the different breed associations the Brown Swiss are second only to Holsteins in milk production, the average yearly yield for all advanced registry Brown Swiss cows being nearly 12,000 pounds of milk testing 4 per cent butterfat.

The Wohlwend herd has now led the Westmoreland Cow Testing Association for two years in succession in butterfat production. A year ago the average yield for the herd was 10,293 pounds of milk and 407.6 pounds of butterfat, while for the year just completed the average production was 10,358 pounds of milk and 410 pounds of butterfat.

Only herds in the cow testing association work in the state last year achieved the enviable position of the "400"-pound class and by repeating the performance this year the Wohlwend herd proves its high merit.

Gave Nineteen Years' Service

The herd was started on December 22, 1904, when Mr. Wohlwend purchased from his uncle, S. B. Hefty, of Renwick, Iowa, a three-month-old Brown Swiss bull calf and a six-month-old heifer, both registered. At that time Mr. Wohlwend had a mixed herd of registered and grade Holsteins. This six-month heifer, Mollie S. B. No. 2853, gave nineteen and a half years of service in the herd and is now either the mother or the grandmother of all the cows. She transmitted not only production but longevity to her daughters. One of her daughters gave eighteen and a half years' of service and another nineteen years. Her other daughters are still in the herd.

Mr. Wohlwend's Brown Swiss cows are vigorous individuals and are very good feeders; capable of taking care of a large quantity of roughage. They appear to prefer a grain mixture of a wide nutritive ratio rather than a high protein feed. During the summer a home-mixed grain ration with a nutritive ration of 1:6 is fed at the rate of one pound of grain for every five pounds of milk. The pasture is blue grass and clover. The first cutting of clover is used for hay and the cows are then allowed to harvest the second crop. This second crop of clover usually puts them in good shape by the time they are brought to winter quarters. The winter grain mixture has a nutritive ratio of 1 4.5 and is fed in the proportion of 1 pound of grain to 4 pounds of milk. Mixed clover hay and corn silage are used as roughages.

Raise Own Replacement Stock

The Wohlwends raise their own replacement stock. The heifers are kept growing rapidly so that they will freshen when they are about twenty-six months of age. They are given fourteen months between first and second freshening, twelve months' lactation period and two months' rest. As near as they can manage it they have the cows freshen every year thereafter. The method of increasing production is through the use of better sires. The present sire is Stuessy's King of Valley Grove No. 15532, a grandson of Goldie Merrillan, the highest producer in the Brown Swiss four-year-old class with an official record of 22,092.7 pounds of milk and $73.51 pounds of fat. His dam has an official record as a two-year-old of 13,839.2 pounds of milk and 505.57 pounds of fat.

Both the Wohlwends are highly in favor of the cow testing association. They state that it makes the work more interesting; serves as a guide in feeding, and shows what each cow is doing. While a person can get some of these benefits by the use of a milk sheet and a dairy scale, yet the public pays little attention to the individual records made by the owner.

Their testing work so far has been done entirely on the basis of two times a day milking under ordinary farm conditions. The individuals of the herd range in age form two to eighteen years.

A father and a son are a great combination on a dairy farm, especially when both take a deep interest in the herd, as is the case with the Wohlwends. The individuals in the herd show excellent udder development but undoubtedly the good care the cows receive is no small factor in the splendid record made by the herd.—A. A. B.

Queen Bellicent 9435, who has a record of 12,261 lbs. milk and 498 lbs. fat

Nine Southern York County Herds Are in 300 Pound Class

THE Southern York County Cow Testing Association finished its first year, September 20, 1927, with 26 whole-year members. There were 487 cows in the association during all or part of the year.

The results for members are as follows:

Total average number of cows in the association	411.42
Ave. per cow: Lbs. of milk	7387
Pounds butterfat	291.5
Percentage of product	3.9
Value of product	$220.86
Cost of pasture	13.82
Cost of roughage	28.93
Cost of grain	29.01
Total cost of feed	91.76
Value of product above feed cost	129.10
Returns for $1 expended for feed	2.41
Feed cost per cwt. milk	1.24
Feed cost per pound of fat	.31

The following is a grouping of all cows producing over 300 lbs. of butterfat. They are grouped as follows: Group 1, above 500 lbs. butterfat, 3 cows; group 2, between 400-500 lbs., 25; group 3, between 300-400 lbs., 129. Total number of cows producing over 300 lbs. butterfat, 157.

Geo. C. Weber, county agent; James R. Kilgore, tester; figures compiled by I. O. Seidelmann.

Nine herds with an average of five or more cows exceeded an average production of 300 lbs. butterfat. A complete list of these herds follows:

Owner	Ave. no. cows	Breed	Pounds milk	Pounds fat
J. S. Murphy, Woodbine	14.75	R. H.	11,000	369.6
J. R. Showalter, Woodbine	29.57	G. H. & G. S.	9395	360.4
H. Lyle Hess, Delta	10.83	G. S.	7233	329.5
Webb Bros., Fawn Grove	21.08	G. S. & G. J.	7417	345.2
R. E. Neely, Muddy Creek Forks	25.17	G. J. & G. H.	8241	344.3
W. S. Grimm, Red Lion	25.92	R. H.	10,126	321.5
C. J. Taylor, Dallastown	16.08	G. S.	7074	314.0
Dale D. Kilgore, Woodbine	10.42	G. S. & G. H.	7765	303.0
Geo. W. Wambaugh, Delta	15.00	G. S. & G. J.	7105	302.2

A Milk Shortage Is Now the Cry

NOT until a year ago was a milk shortage ever heard of in any serious connection in the New York milk shed. Dealers, dairymen and consumers have long heard much about a surplus of milk and the dairymen at least had become acutely aware of its disastrous effects.

Yet such has been the growth in the population of New York City and the situation has been true of other large cities, that consumption of milk has grown very fast from this cause alone. Then with more enlightenment as to milk's protective qualities as food the per capita consumption has increased.

Many Reasons for Shortage

Other things entered into the New York shortage, such as the loss of cattle on nearly 400,000 farms where testing for bovine tuberculosis has been carried on, and, perhaps not least, various milk scandals and investigations have uncovered facts showing that thousands of quarts of "bootleg" milk and cream from sources outside of the milk shed have for years been admitted daily to this market, milk from herds and barns not meeting the high standard of requirements that the New York City Board of Health has set up. The Lenroot-Taber bill shut off the Canadian source of such milk, and a housecleaning within the city's department of health and including dealers in milk have shut off all other sources of such milk within the past year. Then a too low price for winter milk had led to too much summer production.

It has seemed almost beyond the ability of New York dairymen to switch their dairies from spring and summer production to fall and winter production on such short notice as was given them, following the exclusion of milk from illegal sources.

A real raise in the fall milk price was made on August 22, following almost heroic efforts on the part of the dairymen's main organization, the Dairymen's League Cooperative Marketing Association, Inc., to increase the fall milk flow of all herds in the milk shed.

Heavy Consumption Christmas Day

Every reasonable method of increase has been urged, including the destruction rather than the sealing of calves in the period of shortage, which centers in late November and December,—and also the proper care and feeding of cows, the use of powdered skimmilk in the rearing of calves and other devices.

Thanksgiving day is the day of biggest consumption, especially of cream, for the whole year. Christmas is another occasion for heavy use of milk and cream.

The glad news has been flashed to eastern dairymen that the crisis in the shortage has been safely passed, with but one day when any real cuts in milk route orders had to be made. This was despite the fact that four carloads of milk a day had been sent to Boston following the loss of 15,000 cows in the New England flood.

Commissioner of Health, Dr. Louis M. Harris, of New York City, after having considered that necessity of admitting outside milk for a year, announces his belief that this will not be necessary either now or for a period of years.

"We have gone as far as we dare to go," says Dr. Harris. "We dare not take in a wider territory under present conditions for reasons affecting public health."

He also approves Governor Smith's statement that milk should be regarded as a public utility. "When milk comes to be regarded as sun, air and water are today," says Dr. Harris, "then many changes in obtaining and distributing it will be made and it will become the business of the state not only to provide milk in sufficient quantities, but to protect and safeguard that supply."—M. G. F.

Should Gluten Be Used in the Dairy Ration?

The following information is published for the benefit of readers who have asked for information about the feeding value of corn gluten.—The Editors.

CORN gluten feed contains at least 23 per cent protein, which is of good quality, easily digestible and convertible by cows into milk and body tissue.

It contains more than 80 per cent total digestible nutrients and is not equalled in this respect by any of the widely used protein feeds and by none of the carbohydrate feeds, except whole corn, hominy and corn meal. Gluten feed is palatable to stock and has no harmful effects even when fed in large quantities. The manufacturers recommend that 35 per cent of a good milk producing ration should be corn gluten feed.

Before mixed rations came into such wide use, a favorite grain mixture among dairymen was "two parts gluten and one part bran." The dairymen produced a great deal of milk and kept their herds in good condition on this mixture.

Considering its palatability and digestibility the price of gluten feed is low and it furnishes protein and other nutrients very economically. It can be obtained at practically any feed store in the northeastern United states.

If your aim is to produce as much milk as possible at low cost and without detriment to the health of your herd, you cannot do better than to use corn gluten feed in a liberal amount as the protein basis of your grain ration.—H.

This Book Saves Hours of Needless Hard Work

THE other day, a prominent farm paper editor made this startling statement: If the average dairyman would sell a third of his cows — even letting a blind man pick out the ones to keep — and feed the remaining two-thirds according to the latest methods, he would make more money with a third less work. And he proved it with figures!

Why work your life away needlessly, when a postage stamp will bring you this free book of practical, tested rations for business farmers? Learn how to make higher profits per head, with Linseed Meal and your home-grown feeds.

Mrs. GERTRUDE S. STEWART

Club Influenced Community

New Hampshire's First Rural Health Center

DEERING CENTER, a picturesque hamlet in the foothills of the White Mountains, five or six miles from the nearest railroad station, is town headquarters for Deering, a township of less than three hundred people, largely engaged in agricultural pursuits.

The people of Deering are active, forward-looking and keenly anxious to advance the interests and welfare of the community. The women are especially well organized and, through their Deering Community Club, have aroused much interest in the advancement of the civic, educational, social and health conditions of the township.

In the summer of 1926, a child health conference for this district was organized and conducted at the Deering Town Hall. This conference

The child's gain in weight and height is watched carefully

was highly successful and resulted in the enrolment and physical examination of nearly one hundred per cent of the children of the township. It is rather interesting to note that a very gratifying number of the physical and non-readily corrective defects noted in the examinations were later corrected.

Another interesting outgrowth of Deering's child health conference and the resultant improvement in the physical condition of a number of children, was the stimulation of an interest on the part of the women of the district in health work generally. This culminated in their desire to develop a plan whereby these child health conferences might be continued.

State Conducted Clinic

Accordingly, the women of the district arranged with Mrs. Mary D. Davis, of the New Hampshire State Department of Health, to conduct another child health conference during the 1927 summer months period. Clinics were conducted again, children were examined, weighed and measured, toxin-antitoxin administered and some vaccinations made. The mothers were given instruction in elementary hygiene, care of children and the preparation of foods.

It was during the conduct of this second child health conference and its attendant clinics, that the women of the Deering Community Club made their plans to establish a permanent health center for the township. Quarters, centrally located and adjacent to the town hall, were engaged and funds appropriated by the Community Club for their alteration and equipment as a modern and up-to-date health center. Dr. Eleanor A. Campbell, founder of the Judson Health Center, New York, in addition to volunteering her services as examining physician without charge, very generously donated the more expensive clinical equipment and apparatus.

New Center Covers Many Fields

On October 2 this health center, one of the best equipped in any rural section of the country, was thrown open for inspection to the people of Deering and the nearby towns.

In the conduct of the future work of the rural health center, the New Hampshire State Board of Health, through its Division of Maternity, Infancy and Child Hygiene, will actively participate. Arrangements have been made by Mrs. Davis, chief of the division, to conduct a series of health classes for mothers and older girls. The American Red Cross will give courses in first aid and practical home hygiene. At the request of the men of the district, classes will be organized for instructions in emergency first-aid measures. It is hoped, also, in the near future, to arrange for periodical adult physical examinations.

New Hampshire's first rural health center starts its career in an encouraging and satisfactory fashion. Backed by interested supporters and clients, it ought to be a success. Health workers throughout the state and country will follow its fuller development and work with keen interest.—American Child Health Association.

Surprises Hidden in Her Ball of Knitting

A PLEASING gift for a little girl who has reached the convalescent stage after a weakening illness, is made by cutting bright colored silk or cotton pieces into carpet rag width, sewing the ends together and winding into a large ball.

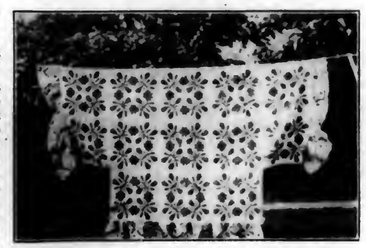
The center of the ball should hold some pretty little gift. Around this gift wind a layer of the rags, then insert another gift, a small paper doll, a little pencil, or a tiny bright-colored handkerchief. Continue building up the ball, with gifts wound in but be sure that each is well covered so that no two will be discovered at the same time. When the ball is finished set up a strip to be knitted having about five stitches on the needle and present this with the needles and the suggestion that as she knits she will surely be rewarded.

Be very careful not to put too many gifts in the ball as the anticipation of finding one when she has knitted down to it is the real pleasure.

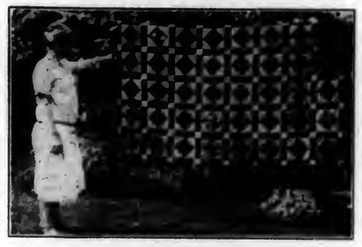
From a Quilt Treasure Chest

Floral Wreath

YOU will be delighted, I know, with these lovely quilt ideas. The Floral Wreath is just as attractive when made up without the cut corners. This is the first design we have offered you using the appliqued designs, and they are as fashionable as beautiful. This pattern is lovely also for up-to-date pillows. Now is the time of year to renew



and brighten up faded cushions tops. Why not use up some bright-colored tid-bits on harmonizing velvet or other cloth and give the living room added charm? This block is fifteen inches square, so it is a good sofa-pillow size.



'Round Our House

THE simplicity of this design is charming. This very quilt was made in 1831, and is the treasured possession of the granddaughter who is letting us see it. I believe most of us can copy the pattern without any taken, and you need help. If I am miss the four cutting shapes needed. Keep this picture for your reference as no regular pattern will be made.

Patterns of the Floral Wreath design are fifteen cents. Send all orders to Quilt Pattern Service, PENNSYLVANIA FARMER, 261 S. Third St., Philadelphia, and be sure to enclose a self-addressed envelope. There is no charge for the help on 'Round Our House, if you ask for it in connection with another quilt order.—Gertrude S. Stewart.

Only One Week More —Two Suggestions

OUR youngsters take great delight in selecting for us gifts we really desire. Here are two that I wish every one of our page readers could have. If you are too bashful to tell father and the children about it, show them the article.

How About a Camera?

You surely have been thinking about our wonderful Beautifying the Home Grounds Contest, the one in that last October number. Have you forgotten that we are spending $100.00 in prizes? If you had a camera you might win some of that money. Nearly every farm home has a nook somewhere that could stand beautifying. Better read over your issue for October 29 and let the home folks give you a camera for Christmas.

A Binder for Our Leaflets

A great many of you have been sending for our Home Page Leaflets for Homemakers. Many of you have the set of three already. Many more will be asking for them in today's mail. Now it's one thing to have something valuable in the house, and quite another to know where to find it when you need it.

We have punched these leaflets to prepare them for binding in a book cover. These three and all that follow will be of uniform size, and how neat and lasting it would be to bind them in a good cover. We can furnish you with the very cover you should have in black imitation leather for 75 cents. Send your orders promptly, as the Christmas tree will be decorated in just one more week. Order direct from Home Page Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.—Gertrude S. Stewart.

One Woman Settled Her Meat Problems

ONE of our readers wrote us a very enthusiastic letter about the issue of November 26. She says, "I am just reading the Home Page in Pennsylvania Farmer, and what should I find, but help with the very thing that has been troubling me for days. How is it that each week you seem to know exactly what we most need at that time?

"Please do send me those three bulletins that help with canning and preserving the year's meat supply."

She has her much desired leaflets. How about you? If you have forgotten to ask for yours, do so today. They are free. They are called, Secrets of Successful Canning (several hundred of you have that one already), Meat Canning, and Curing of Meat on the Farm. Send your request to Household Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa. Don't forget to send us a self-addressed, stamped envelope. There are two requests on my desk which I cannot fill. They want bulletins, but I have no address. I'm a pretty fair mind reader, but filling out your addresses is a bit beyond me.—Gertrude S. Stewart.

EDITORS' NOTE

When sending orders for any article to this department please be sure to make checks or money orders payable to Pennsylvania Farmer.

From Two to Twenty

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5989.—Three sizes: 2, 4 and 6 years. A 4-year size will require 1¼ yard of 36-inch material. For the collar and cuffs of fur cloth, ⅞ yard 6 inches wide is required. Pattern 15 cents.

5977.—Four sizes: 14, 16, 18 and 20 years. A 16-year size will require 2¾ yards of material 40 inches wide with ½ yard of contrasting material 36 inches wide for panel and facings on collar, cuffs and belt. Pattern 15 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

A Worn Out Stove Spoils A Good Cook

NO WOMAN can be expected to get the best cooking results from a stove that has outlived its usefulness. Many a husband who would not think of working with old, worn-out tools, fully believes that his wife should still be a good cook with an old, worn-out range. That is impossible.

A porcelain enamel range is easy to clean. All that is necessary is to go over it with a damp cloth and in less than no time at all, the range gleams like new. One of good quality is in no danger of ever chipping or cracking. Its popular colors, delft blue or soft pearl gray, harmonize well with any kitchen decoration and add a cheerful note.

There are many good makes of porcelain enamel heating stoves and stove manufacturers are now building them in such quantities that they can be had at practically the same price as that asked for other ranges. All of these new porcelain enamel ranges have features which assist in making cooking a pleasure instead of a toil.

Note:—Figures tell us that the eastern states are wide-awake in this up-to-date stove question. Will you readers who have been enjoying the advantages of porcelain enamel ranges write us of your experiences? Send your letters to Home Page Editor, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

ROAST VENISON

Wipe meat with cheesecloth wrung out of cold water, spread with butter and season with salt and pepper. Put meat on rack in pan and dredge liberally with flour. In bottom of pan put one cup water, three stalks of celery diced, three slices of onion, one-half cup chopped carrot and half a teaspoon minced green pepper. Bake until meat is tender, basting frequently, and adding more water to that in pan if required. Serve with a sauce made of liquor remaining in pan after venison is removed. —L. M. T.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Friends:—Here I am again. I saw in last week's paper that my letter was on the page. One of my dogs got killed but I still have one left and I have a pet cat named Peggy. The dog's name is Tip. We live on a farm and have cows, horses, pigs and chickens. I like to go to school. I go to the Centre Hill School.—Gladys Poorman, (X), Centre County, Pa.

Dear Forum Friends:—Is there room for one more letter on this page? This is the first time I ever wrote to the Forum page. I am going to school now and like it very much. I go to Smith School No. 5. Enclosed you will find a picture of

BETTY AND BOBBY
Dorothy Rudish, Indiana County, Pa.

the twins. As you hold the picture Betty is at the left and Bobby is at the right.

I am sorry I did not join the Forum Make-Believe Party. I am going to attend a party about a mile from here and will write and tell you about it.—Dorothy Rudish, Indiana County, Pa.

I'll be anxious to hear about the party.

THE FORUM EDITOR.

Dear Forum Friends:—It has been a long time since I wrote to this page. I will tell about our trip to DuPont.

It was on the 10th of August. We left in the morning between seven and half past. We had a fine time. We took lots of pictures. It was very nice to see all of the beautiful flowers and bushes. We saw flowers like we have here but they were much larger and taller. They had red, white and blue grapes about a foot long. Oranges and peaches, too.

THREE MAIDS FROM JAPAN
Bertha Leaman, (X), Lancaster Co., Pa.

They made our mouths water. They had so many roses. Red, white, pink and yellow. It was about 1:00 o'clock when we left there. From here we went to Delaware and watched the ferryboats coming and going.

The last time I wrote I told about singing the Japanese song. I am sending a picture of us when we were dressed as Japanese. The picture was taken in the spring. They are, from left to right, myself, Ruth E. Leaman and Verna E. Herr.—Bertha Leaman, (X), Lancaster County, Pa.

Dear Forum Editor:—I received my membership pin and thank you very much for it. You asked about my ducks; I have nineteen. They are nice and big. I have one yellow one and the rest are all colors. Do you return pictures when they are sent to you? If you do I will send you one of my sister, Frances, and me sometime. At school we play deer and other games. We have fun.—Elizabeth H. Diffenderfer, (X), Lancaster County, Pa.

Send the photo along but mark on the back your name and address and the word "Return." Then it will be sure to find its way back to Manheim.

THE FORUM EDITOR.

Hello, Forum Friends:—I come from good old York County. I enjoy reading the letters boys and girls send to the Forum page. Winter is here again and the squirrels and rabbits. The squirrels come to our yard to eat the corn and nuts my sister and I scatter for them. They also carry some to their homes in the trees.

Answers to riddles submitted by Pearl Ruhl, (X), Clinton County, Pa.

1. Because it sticks up for the city.
2. I. O. U.
3. A shoe nail.
4. More money.
5. Forgetting to return borrowed volumes

My brother, Harold saw a rabbit in the woods last week. It was lame and hungry. I believe that some hunter had wounded it. I really think it is a shame. Harold brought it into our yard and fed it some cabbage leaves.

Yesterday I saw two flocks of snow geese fly above our house. I am glad when the ground is covered with snow. Then daddy gets old Doll and the sleigh and mother wraps us up with scarfs and warm coats. We then all take a ride back to grandma's. We are always greeted with a warm welcome and the day is full of fun playing with our little cousins.—Dorothy Martin, York County, Pa.

Dear Forum Friends:—This is the first time I have written a letter to you. I live on a farm near Gettysburg, Pa. For my pets I have a dog called Mut and a cat called Nigger, but best of all a little Shetland pony. Her name is Jenny Betty. My sister and I drive her two miles to school every morning. We go to the Orrtanna grammar school.—Pauline Hager, Adams County, Pa.

A HAPPY GROUP
Pauline Hager, Adams County, Pa.

Dear Forum Editor:—I have just received your pin and am very glad to get it. The next time I write I expect to send some pictures taken during my trip to the mountains.—Nellie McLaughlin, (X), Lebanon County, Pa.

I'll be looking for the pictures. If they're clear enough I'll see if we can find room for them on the page.

THE FORUM EDITOR.

Dear Forum Editor and Friends:—I received my membership pin and I can't thank you enough for it. I also received your letter. You asked whether I thought I was never going to receive the pin. That was just what I thought. I still read the Forum page and I think it gets more and more interesting each week.

When are we going to have another contest? I think it would be nice to have one about geography.

I think Irene Zimmerman wrote a very interesting letter. Well, I guess the Forum friends would better do their shopping for Christmas.

Do you have your stocking ready to hang up for Santa? Well, I must close for this time. I will write again before long.—Sara Derstine, Montgomery County, Pa.

What sort of a geography contest do you suggest, Sara? Yes, I'm eagerly waiting for Santa.

THE FORUM EDITOR.

Dear Forum Friends:—I live on a farm. We have cows, heifers, a calf and four bulls. For pets I have a dog named Ring and four cats. The old cat can catch mice very good.—Clara E. Layser, (X), Lebanon County, Pa.

A Promise

DEAR FORUM BOYS AND GIRLS:—There were so many contest papers to correct I am not yet able to give you the names of the winners. Next week I hope to tell you the names of those finding the greatest number of words in "Thanksgiving." Are you all very busy preparing for Christmas?

THE FORUM EDITOR.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Did you ever try to imagine yourself living away back in some other time than this, when folks did not have so many conveniences as we have? Surely Benjamin Franklin would have liked to talk over the telephone—if he had had one; and just think how helpful an airplane would have been when the early settlers crossed the prairie! Even little things which we are all so used to that they seem perfectly natural would have been a help in bygone days. Mrs. Noah must have had an exciting time remembering just where Mr. Noah had left which animal—when he happened to forget, that is. At any rate, we know she did not use labels for their cages; and it looks as if somebody had mixed up the labels for the animals in the puzzle this week. The names of the animals are all there, but the first part of one animal's name is followed by the second part of some other animal's name. Take the first one "ELE PILLAR." You just know when you see "ELE" that it must be followed by "PHANT," and if you look thru the list you will find the rest of him, sure enough, and have "ELEPHANT" to head the list. You probably have some of these animals on your farm, but I think you have heard of them all. When you have the names all straightened out so that anybody in Noah's Ark would know which was which, let me have your list, either on a postcard or in a letter, so that it reaches me by Friday, December 23rd. I'm making it one day earlier than usual because Santa Claus and his friends will have lots of things in the mail at that time. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

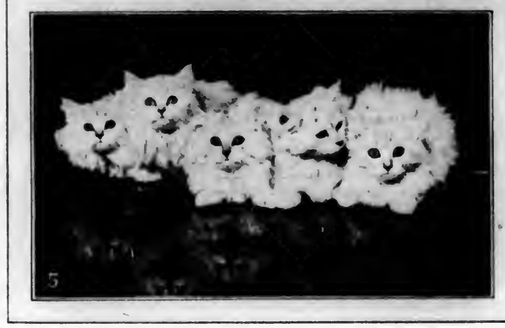
The answer to the puzzle in the November 26 issue (about what product goes up in stormy weather) is: UMBRELLAS. It so happened that during the week you were solving that puzzle I carried my umbrella every day and, just as our puzzle said, the umbrella went up almost every one of those days.

The prize winners are: Emert Baker, age 9, Everett, Pa.; Katharine Greenly, age 9, Millville, Pa.; Dorothy Jean Kenney, age 7, Monongahela, Pa.; Harto Lour, age 11, Glyndon, Md.; Katherine Madden, age 11, Sicklerville, N. J.; Chester R. Leaman, age 11, Bird-in-Hand, Pa.; Ruth H. Rohrer, age 10, Lancaster, Pa.; Mary Alice Shearer, age 8, Glen Rock, Pa.; William Snyder, age 9, Rockwood, Pa.; John Henry Yackey, age 12, Egg Harbor City, N. J.

WHICH IS WHICH?

ELE PILLAR	BUTTER FER
DON FLY	BOOB ON
SQUIR YER	CATER BIT
REL PHANT	HEA REL
LI KEY	RAB TER

PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—This beautifully carved organ case has just been installed in a church in London, England.

2.—The U. S. S. Saratoga, the world's largest and fastest floating flying field, being towed into drydock at the Philadelphia Navy Yard. This airplane carrier is 888 feet long, has a displacement of 33,000 tons, will have a crew of 2000 officers and men and can travel at the rate of 40 miles an hour. Its cost was about $55,000,000.

3.—The "Splitdorf," in which Bert Acosta and E. Burgin will try to break the world's flight endurance record.

4.—The plaza of San Marco, Venice, Italy, was flooded by the rising waters of the canals recently.

5.—A litter of five kittens, entered in the specialty Show of the Silver Society, in which many cat aristocrats are exhibited. The show is held in New York.

6.—The Meade Memorial, the latest monument to an American hero placed in the national capital. The memorial was erected by citizens of Pennsylvania at a cost of $400,000.

TIGHT BINDING

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

WHAT did worry me was the thought of Fanning. He might not know me in rags and dirt, but he should in this guise. I comforted myself with the thought that the lights would be on the table and the servants in the shadow by the wall, also on the fact that it would take some imagination to look for an escaped prisoner of his among German waiting men. To be sure, Marshall had asked him about me, about Craik rather, and he might take it in his head to look out for me. The odds were even, I finally decided, and waited the event with more fortitude than I had thought myself capable of.

The hour was late and the cook fuming when a dozen officers finally came in. Getting the troops in shape for the night had taken some time. Another Moravian I had not seen, evidently like Brother Marshall a leader, brought them in and saw them seated. To my great relief, Fanning was not with them. He, I gathered, dined that night with the governor.

The officers were almost as hungry as their men, and we were kept busy bringing more dishes from the kitchen. After the meal, they sat smoking and drinking, while the German boys cleaned up in the kitchen and I stayed on duty in the parlor to fill glasses. I learned a little from their talk. Waddell was to go southwest to round up Regulators and collect arms. The main army was to head back to Hillsboro after the King's birthday, now only a few days away.

For me there was only one bad moment in the evening. As they were going out, one young man happened to look me square in the face. He hung back for a second.

"You're not German?" he asked.

I shook my head. The alarm that must have showed in my face was reflected in the look of mild astonishment that crossed his.

"Come on, Jones," called one of the officers and he answered. Then to me:

"If you're a Regulator, I'm puzzled if I know what you're doing here. If you aren't—oh, I see, perhaps. Fanning has grudges. Well, don't poison my soup."

AND with that, he laughed and was gone. Somehow I felt he was not likely to make trouble. Indeed, if it were known I was Fanning's prey, I had an idea I might get sympathy, though little else, from many of these officers. They did not care much for him, spoke scoffingly of his flight at the battle, and bitterly of the illegal hanging of Few.

I worked over the table and, according to the cook, did it very clumsily. Then I got my fill of food and managed to wrap up some bits of meat in a cloth and slip it in my pocket. I had in mind to get this to Pugh, though I had no idea how it was to be done.

Johan took me along to show me where to sleep, but I had no trouble in inducing him to go down to see the camp first. A good part of the village was down there, just as a good part of the camp was up in the village. Discipline was not strong that night, and we had an easier time than we would have had later.

Down towards the prisoner's encampment we went and finally met a boy, laboring under two baskets of food. I found by guessing at words and interpreting gestures that this was for the guard and told him that I would take it to them. He was doubtful of me, but Johan evidently backed me up, and he finally let go the handles and scurried back.

THEN I sat down in the grass and tried to make Johan an accomplice. It took half an hour, and then I was not altogether sure he had learned his lesson. Finally I decided to chance it and sent him forward with one basket. Then I put an armful of light wood over the other basket, and came along after him. To an observer, I hoped it would seem that I was only dragging an armful of wood.

Johan found the guard and showed them the basket. They did not require explanations, but came running to plunge into it. Meanwhile I brought up my armful of wood close to the prisoners and stopped to rest. They looked at me apathetically.

"Pugh," I whispered and they came to life suddenly. Some one came pushing forward.

"There's a basket under this wood," I announced. "Stick an arm under and grab it. Go easy. Don't let the guards see," I felt the armful shake, and, just then a guard hailed me.

"Here, Dutchie, don't put the wood on that fire. Over here."

I started slowly to pull my load that way. The basket was gone. I glanced back and saw the prisoners bunched up again as usual, but I was gladdened to know that some of them were getting some real food into their stomachs.

Next day was an easy and an interesting one for me. I did what was required at the tavern and hung around to watch the troops and pick up what scraps of news I could in my spare moments. Along in the morning came several wagons of flour from the south fork, and behind them six big oxen. All these went directly to the use of the army. Later in came more beef and loaves from Bethania, so that everybody fared well, and even the prisoners, as I took care to find out, shared in the plenty.

Early in the afternoon, I heard a considerable commotion and ran out, with the rest of the cook's crew. There was a company of foot marching along the road and behind them some thirty miserable looking creatures like the prison gang I was with. These indeed were not quite in such bad shape, for they had been in the toils only a day or so. One poor man cried out to the Moravians as he went past, and one of these spectators with concern in his face, started away on a run. Presently he came back with Brother Marshall, who was listening attentively to the man's story, and who went direct to the Governor's tent. I learned from the officers in the evening that he had secured the release of the man, an entirely peaceful neighbor whom the troops had picked up by mistake.

That evening, too, I endured the test of meeting Fanning. He came in to dinner late. A place had been saved for him, and I slipped around behind it as he sat down. I stood to his back all evening and waited on him most assiduously, principally in order that he might not find something wanting, turn to call a boy and see me. I dare say, however, that I wore no very pleasant face as I served him. I could not help remembering poor Few and the firing squad that Dodson had so barely saved me from.

Captain Jones sat across from Fanning that night and gave me a quizzical look from time to time. After Fanning had bolted his meal and gone, Jones sauntered around to take Fanning's seat in order to get nearer the man with whom he was conversing. As he passed me, he said under his breath:

"Don't stab him while I'm sitting next to him. I don't want this uniform spoiled."

THIS was both humor and a warning. I vowed to keep a better face after that, although I doubted if any other had Jones' keen eyes. It was hard for me to see why the captain did not find out who I was, but evidently it amused him to have a small mystery and I gathered he found little amusement as a whole in this campaign.

The officers spoke again of Few that night. One of them, a newcomer who had not been with the group the night before, spoke of the execution as a good example. He challenged Jones as he finished:

"Don't you think so, Wiley?"

Wiley Jones shook his head. "I think it was a foolish blunder and a pretty cold-blooded murder in the bargain. Right after the skirmish I rode over to Husband's to seize his papers. I found some letters from Few. He was mad as a hatter, to begin with, and anyway there was no legal basis for his execution. He claimed he was called by God to make over the world on a new plan and was starting in on North Carolina. The whole thing was that Fanning had it in for him. I don't know why. There are several very unpleasant stories going around, but I can't say as to their truth."

"There'll be more hangings," persisted the first man.

Mr. Jones shrugged his shoulders and shifted the talk to the merits of fighting cocks and race horses.

Next morning I was sent on an errand across the stream and stopped for a second on the bridge on my way back. Some one called my name in a coarse whisper. I looked up.

"Look at the water and twiddle your toes in it or something," the voice went on urgently. "I'm behind a tree to your left, but keep looking the other way."

A whisper disguises a voice effectively. I felt a second's doubt, then whispered back:

"Krafft?"

"Sure. Why not crawl over here with me and make a run for it?"

"Parole."

"Who to?"

"Brother Marshall. He got me out of the chain gang. I'm working at the tavern now. Back with the rest when we start for Hillsboro."

Krafft cursed heartily. My uncle was near by, he said. He had several men hanging about trying to get word of me and of the other prisoners. Was a rescue possible?

"They're right in the middle of the army," I warned. "Better not risk it."

"Does Fanning know who you are?" Krafft persisted.

I told him not yet, but that he might discover me almost any minute. Then a number of things might happen.

"Your uncle will want to know that," said Krafft after a minute. "We may have to trim Fanning's comb yet. Well, keep up your heart and run along."

I ran and got a good scolding from the cook for being so long. The meeting cheered me, even though I could not see how my uncle or his men could do anything for me. Yet, with aid that near, something might happen; even that small hope was very welcome.

A DAY or two after that came the King's birthday, and a parade. The Brethren with very curious looking horns, led the procession. Then came all the troops. They marched through the town, out to the meadow and went through a good many evolutions, firing their guns and making a great smoke and stink.

I fell in behind Brother Marshall and Wiley Jones on the way back. The good Moravian was saying how well the troops had duplicated their movements at the battle of Alamance. This, indeed, was what the Governor had announced.

"The duplication was hardly exact, sir," commented Jones. "Colonel Fanning's horse did not run away with him this time."

There was another act to the ceremony, and this was in front of Tryon's tent. To him, surrounded by an imposing guard, came Brother Marshall with two or three more of the Brethren. They read an address full of loyalty to the crown and to the Governor. It amused me to note that at every mention of King George, each of the good men made a low bow, and still more to see that when His Excellency was mentioned in the address, they made a bow just as low. The address and bows left the governor smiling; I returned a pleasant response and the day was over.

I was hurrying back to the tavern and to save time cut in by the side door. There I came plump into an officer coming the other way. I jumped back and apologized. Then I saw his face. It was Fanning.

He knew me in an instant. The daylight gave him probably his first good look at me. He tugged out a pistol on the instant.

"HERE guard," he bawled, "a escaped prisoner."

I put up my hands and Fanning, still shouting, backed me into the house.

Another officer came running in. Fanning shoved the cocked pistol in his hand and told him to watch me.

"Dangerous fellow—close to Hunter," he explained briefly and somewhat to the other officer's surprise and doubt, if I interpreted his lifted eyebrows. No doubt I looked a mild looking fellow to need such expert guarding.

"I'm on parole," I told him as Fanning went out. "Belong with the prisoners, but Brother Marshall got me out to help here in the tavern. He told me he had Fanning's permission to do it."

The officer looked at me more closely.

"Of course," he cried. "I've seen you waiting on table here. What's got into Fanning?"

Just the same he kept an eye on me, although he lowered the pistol.

Outside I could hear Fanning's voice, roaring for the guard. Feet came pounding up, and two men with fixed bayonets pushed their way in. They looked at the officer and me in some stupefaction. Doubtless they expected to find a nest of armed ruffians.

As they paused, there came the crack of a shot outside and the next second Fanning came bolting in.

"Look there," he cried and held out his hat. There was a hole in it. "The careless scoundrels—I'll teach them. Here, captain, you take a squad and find out who did it and put him under arrest. I'll dog him till he wishes he was dead, blast me, two inches lower and it'd have split my skull."

"Your pistol, sir," said the captain formally and handed it back to him. "I'll look after the matter, and I won't need a squad."

At Fanning's orders, four soldiers had my hands tied behind me in a second. They handled me roughly, although I made no resistance.

"That's right," Fanning commanded. "Tie him up tight. He's a dangerous scoundrel."

HE LOOKED me over with a great deal of satisfaction when the job was done.

"Spying, eh?" he asked. "You had your nerve with you, my lad. We all know about you, how you plotted with the northerners and attacked Waddell's train and tried to burn the camp. And now you'll see how it feels to get a rope tight about your neck. You should have seen Few kick."

This sickened me, but I tried to stare ahead stonily and to act as if I had not heard.

"Bring him on," Fanning ordered finally. "He goes before the governor at once."

So we went down the road and across the square to where His Excellency was still sitting in front of his tent with a number of officers around him. Still there, too, was poor Brother Marshall, bowing every few words and no doubt being as complimentary as he knew how to be.

Fanning burst into the circle and waved to the guard to bring me on. Then he bowed to the governor.

"Your excellency," he cried. "I have the honor to bring before you one of the ringleaders of the rebellion."

I was right in front of the governor by this time. Tryon's eyes snapped and he leaned forward.

"Husband?" he asked, "or Hunter—where?"

Then he became aware of me, with guards on each side and arms bound behind me. In my clothes and rather fair complexion, I looked not unlike a score of German lads in the village. Tryon fixed his gaze on me and while for a second it was savage, it changed speedily to something else.

"This boy," he asked and then paused. "Colonel Fanning, are you in your right mind?"

I had heard the governor, who was a brave man for all his faults, had not been pleased with Fanning's conduct at the battle. Too, he felt that wiser dealing on Fanning's part would have prevented the whole trouble. Though he was prepared to back up the authority of the government, he felt no great love for some of the men he was thereby supporting.

Fanning was taken a little aback, but only for a second.

"He is older than he looks, sir," he declared, "and as vile a rebel as any. He brought a message south from Philadelphia about a powder shipment for the rebels; he killed a sentry and freed himself after he was first taken, he led the attack on General Waddell's train; he was a leader at Alamance and has since hung about the army to kill stragglers. Now I find him spying in the village. I feel sure that your Excellency will agree with me that he has been caught red-handed and deserves the most extreme punishment and at once."

Tryon looked impressed. His eyes were harsh again as he asked me:

"Have you anything to add to this?"

"Only this, sir," said I, "but by that you may judge of the truth of the whole. I was picked up by your men near Great Alamance some weeks since; I have been in the prison gang ever since till lately; I was released from it on parole, by Colonel Fanning's own orders; lately I have been waiting on the officers at the tavern, as no doubt some of them will testify. The Colonel is mistaken; perhaps he takes me for someone else."

Fanning was furious. He broke out into a string of oaths that would have dismayed a teamster. It was impossible, he said—I was the worst liar on ten continents. Turn a rebel like me loose—he would cut his hand off before he signed such an order.

"IF IT pleases Your Excellency," I began a timid voice. I twisted my neck to see Brother Marshall coming forward. How sick the poor man looked. I believe at that moment he saw all his plans for conciliating the governor going to pot.

"If it please you, sir," he began again, and this time Tryon heard him.

"I shall be glad to hear you, Mr. Marshall, as soon as Colonel Fanning is able to recall in whose presence he stands and what conduct is expected of him," said the governor, and the look he gave Fanning was deadly. Tryon was jealous of his dignity. Fanning had missed there, and I began to take a little hope.

Marshall told briefly of how he had wanted a boy to wait on the officers, had asked Fanning and Fanning had told him to take one of the prisoners. He had taken Craik—

"Craig, blast you," Fanning broke out again. "Daniel Craig's nephew."

Craik,—yes,—that was what he had said, the Moravian persisted. Fanning had given him an order, and the boy had been sent. He had given his parole, and had been a good boy in the kitchen.

Some one pushed through the crowd near me. The captain who had been sent to investigate the shooting came up to Fanning and saluted.

"No luck, sir," he reported. "A number of the men had been shooting at targets and had dirty rifles. None admitted it, of course. I warned them."

A SECOND later a soldier came running up.

"Message for you, sir," said he to Fanning and put a piece of paper in his hand. I watched him read it. He ran his eye over the paper casually, then his gaze became fixed. He breathed hard and gave a startled look around.

Meanwhile Brother Marshall had been explaining at length to the governor. Tryon nodded as he finished.

"Have you anything further to add, Colonel Fanning?" he asked pompously. Fanning jerked himself awake as if he had come out of a trance. He made two false starts before he spoke.

"Nothing, sir, nothing," he mumbled. "I was hasty."

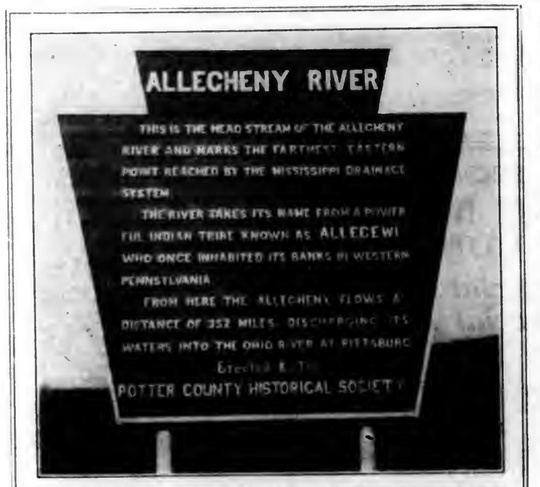
"Hasty and careless, both sir," the governor commented with vigor. "Put this man back with the prisoners and take better care of him."

Fanning bowed his head. The fire was out of him. How quickly he had changed. Still marveling at this, I noted idly that the paper he had been reading had fallen from his hand to the dirt. The breeze flattened out one side of the crumpled sheet. I saw the signature and started. It was my own name, and the handwriting was that of my uncle.

Mystified and curious, I peered at it again. I made out words "two inches lower . . . deal justly . . . you will pay." Then Fanning looked around suddenly, caught sight of the paper and whisked it up into his pocket.

I was more than confused. Fanning's sudden change of heart—a note to him from my uncle—what could it mean? At least it meant that my neck was safe for the time being. That was a great deal.

(To be continued next week)



ALLEGHENY RIVER
THIS IS THE HEAD STREAM OF THE ALLEGHENY RIVER AND MARKS THE FARTHEST EASTERN POINT REACHED BY THE MISSISSIPPI DRAINAGE SYSTEM.
THE RIVER TAKES ITS NAME FROM A POWER FUL INDIAN TRIBE KNOWN AS ALLEGEWI WHO ONCE INHABITED ITS BANKS IN WESTERN PENNSYLVANIA
FROM HERE THE ALLEGHENY FLOWS A DISTANCE OF 352 MILES DISCHARGING ITS WATERS INTO THE OHIO RIVER AT PITTSBURG
POTTER COUNTY HISTORICAL SOCIETY

The little stream that wanders down through a Potter County pasture past this sign isn't as wide as the sign itself, but what a future it has!

The Real Trouble

Young Clerk moodily—And the worst of it is, she didn't say "No," till I'd spent all my cash on her.

His Friend—Never mind, old boy, there are as good fish in the sea as ever were caught.

Clerk—Yes, but what's the good of that when you've used up all your bait?

No One Was Interested

Rufe Johnson's pet hound disappeared. Rufe put the following ad in the paper:

Lost or Run Away—One liver-colored bird dog called Jim. Will show signs of hydrofobby in about three days.

The dog came home the following day.

Bill—Yes, I sold my auto, I had to because it brought an army of tramps about the house all the time.

Harry—Brought tramps around the house? What were they after?

Bill—They admired it because it wouldn't work.

Telltale Marks

Retailer, to new delivery man: "By the way, Hughes, are you a married man?"

"No, sir. Those scratches you see on my face were caused by a bicycle accident."

No Trouble

Smith—Alice and I agreed that after we are married I should decide all major questions and she would decide the minor ones.

Gray—How has it worked out?

Smith—We have been married three years, and I'm glad to say there have been no major questions.

This is evidently the season for Scotch stories. Did you hear this one: "A Scotchman, off on a business trip, called back to his wife and child waving from the window: "Good-bye, all, and dinna forget to tak' little Donald's glasses off when he is na looking at anything."

No Worry for Him

Alpine Climber (on edge of precipice)—And do people sometimes fall over here?

Guide—Yes.

"And what do you do in such a case?"

"Nothing. I'm paid in advance."

Getting it Straight

Cashier Carrie—Somebody told me today that I was good-looking.

Salesgirl Sally—When was that?

"Today."

"No, I mean when were you good-looking?"

A dentist says that he had an absent-minded motorist in his chair the other day. "Will you take gas?" he asked.

"Yeah," replied the a-m patient, "and you'd better look at the oil, too."

Mr. Lamb—Is that a pedigreed dog you've got there?

Pete (proudly) — Pedigreed! I should say so. Why if he could talk he wouldn't speak to either of us.

"What is the charge for this battery?"

"One and a half volts."

"How much is that in American money?"

TIGHT BINDING

Why hens do more on the same feed when they're Regulated!

REMEMBER it's easier for a healthy hen to lay *more* eggs than it is for a run-down hen to lay at all.

That's why it pays to regulate high producing flocks. They don't burn out because Pratts Poultry Regulator replaces minerals that heavy egg production *normally* uses up.

Also the vegetable tonic ingredients keep up appetite, improve digestion, blood and nerves are toned up and kept in egg laying trim.

And the 100 lb. drums of Poultry Regulator are a real economy. If you have a good sized flock that's the way to buy. Arrange for a trial of the 100 lb. drum with your dealer.

10 cents per pound—in 100 lb. drums

Pratts Poultry Regulator

55 years of success and fair dealing behind the Pratt guarantee. See your dealer for a money-back trial of any Pratt remedy.

Buttermilk Makes Healthy Birds

THERE are certain foods, which aside from their nutritive value in the poultry ration perform other services such as increasing the appetite and powers of digestion, maintaining the general health and protecting against disease. One of the most important of these is buttermilk. On some farms where butter or cream is sold there is a supply of buttermilk or skimmilk for the poultry, but this is not always the case. Most dealers in poultry feeds now carry condensed buttermilk, a by-product of creameries in certain sections, and it is a well recognized part of the up-to-date poultry ration. A poultryman of thirty years' experience told me some time ago that everywhere he looked on his farm he saw an empty buttermilk keg. I know I have fed a lot of it, using it diluted as the first feed of the baby chick and feeding it right along in various forms as the chicks grow into pullets and finally into breeders.

Benefits Baby Chicks

In feeding buttermilk to chicks as a drink, it should be diluted as it comes from the keg with seven parts of water, which gives it the proper consistency to flow freely. It is a very good plan to dip each chick's beak into the buttermilk when the hatch is taken off in order to make sure that all get some. The lactic acid contained in buttermilk is of great benefit in the intestinal tract, preventing many digestive disorders which chicks are subject to. The buttermilk feeding should be continued as the chicks grow. After a week I prefer to feed as it comes from the keg as this method is much less trouble than diluting it to give in liquid form. A good practice to follow is to smear the buttermilk on a piece of board which is leaned up against the side of the house where the chicks can pick it off. It is not a good plan to let the chicks get their feet in it, as the buttermilk sticks to their toes and may start the habit of toe picking. However, I have found that condensed buttermilk fed freely will stop toe picking and other forms of cannibalism in growing chicks, and in pens where this habit starts I recommend giving all the chicks will clean up once a day, feeding it on a board just as it comes from the keg as described.

Helps Control Coccidiosis

When the growing stock goes on range still another benefit is derived from the buttermilk. It is well known that at this stage in their growth chickens are extremely subject to the serious disease known as coccidiosis, which causes a stunted growth with drooping wings, sleepiness and high mortality. Even when chicks recover, they seldom develop as they should, and are especially subject to many ailments as pullets. It is true that buttermilk will create a condition in the intestines of the chick unfavorable to the progress of this disease, so that by raising chicks on a clean range and feeding plenty of milk the disease can be largely controlled.

When the pullets go into the laying house a moist mash consisting of one pound buttermilk and two pounds laying mash, mixed with water and fed at noon will help to start them laying. In the case of Leghorns that are laying heavily there is danger that they will get too thin, so when the pullets get to producing over 35 per cent the moist mash can be changed to a fleshing mash composed of one pound buttermilk, one pound rolled oats and one pound yellow cornmeal. These quantities are for 100 birds. The same mash can be used for finishing market poultry of all ages. This fleshing mash can also be fed to advantage during the molting period as it is desirable to have hens lay on weight at this time in preparation for the period of production in the spring. This is especially true of breeding flocks, and buttermilk fed during the breeding season will give a good account of itself in the fertility and hatchability of the eggs, and in the vitality of the chicks which are hatched from them.

So that completes the cycle of buttermilk feeding, from the chick through the pullet to the breeder and back to the chick again. But while this little article has been written with the idea of bringing out the special advantages of feeding buttermilk, the fact must not be lost sight of that the buttermilk contains a high proportion of protein in a form very easily digested by the birds, so that in addition to the unique qualities it possesses it is a valuable food as well.—R. L. S. H.

Nest Box Notes

AT THIS time of year many of us are about to sell the bulk of our market poultry. Whenever a fair price can be secured on the farm, it is best to take it. There is no loss by death or shrinkage, no express to pay, and if you have your own scales, little danger of getting stung. If compelled to ship, make sure that the buyer is reliable.

• • •

Many farmers have solved their problems by engaging their market stock to their local grocer or butcher. Others have a retail trade, and get the topnotch price. Sometimes a small ad. in a local paper will get enough customers to take all the birds one has.

They Took Prizes

THESE are some of the prize winning birds and their owners at the recent Mercer County, N. J., poultry show. The man on the left holding the White Wyandotte cock is Mr. Charles Pierson, manager of the Coventry Farms at Princeton, N. J., and president of the Mercer County Poultry Association. Coventry Farms breed White Wyandottes and S. C. Black Minoreas and are usually among the winners at the shows.

Standing at the right is the show superintendent, Mr. Ernest Groves, holding the S. C. White Leghorn cockerel which was first at the show. Mr. Groves has a farm near Trenton and breeds S. C. W. Leghorns and S. C. Rhode Island Reds.—R. L. S.-H.

Favor Baumes Law

YOUR editorial criticizing the Baumes law (issue of November 26) seems to us is a backward step for an editor of a farm journal. This community is suffering numerous losses from poultry thieves from time to time. We also are for a county bounty for capture of chicken thieves. They are no more tolerable in a civilized community than sheep-killing dogs are tolerable. The state reimburses farmers for loss in the one case, why not in the other?

We, too, want laws based on justice. In our judgment The Baumes law may not be perfect but it is a mighty good law. Let the crooks keep away from it as they would keep away from a buzz saw and it will not hurt them. Let us note some of the elements of justice in the law as applied to poultry thieves.

First, poultry stealing is not always petty thieving. Losses ranging from $50 to $100 are not infrequent in this community. These losses might be petty to a bank that is protected by insurance but they are not petty to a poor farmer. It would be interesting to see how you would react to such a loss. Can you imagine yourself in the place of the farmer's wife that has worked hard all summer on a flock of turkeys or chickens and when she has them just ready for the market and planned how she will spend the money, some morning she finds some human skunk has lifted them. Such a loss is not petty from her viewpoint. Nor is it petty in the sight of any one that has heart to feel.

The law protecting poultry must be drastic because of the character of the property. The farmer cannot well watch his poultry day and night but some do that very thing. When a farmer has a flock of turkeys representing some hundreds of dollars he cannot afford the risk of losing them by theft. He cannot well keep them locked up and a lock would not protect them at any rate. So the law must be drastic to be effective. The Baumes law is effective, that is why we are for it.

Let Society Support Them

Again, after a fourth conviction of a felony it is practically certain that the offender is a habitual criminal. Simple common-sense justice would teach that the most satisfactory way to deal with such persons is to eliminate them from society. Such people are too near the jungle to be trusted with the liberties of civilization. If society must support them let it be in an orderly way by society as a whole and not by the poultry raisers alone. That is simple justice.

Then, too, in justice to society and the criminal, the Baumes law is a humane law. It rids society from a dangerous willful dependent. It places him in an institution where he receives needed discipline and enables him to be a law abiding citizen. He has regular employment and some comforts many people do not have. The purpose of the Baumes law, like all law, is to make it as easy as possible to do right and as hard as possible to do wrong.

It is too soon to condemn the law. Of course, every thief, bootlegger and crook in the country thinks the law is unjust but if there is an element of doubt regarding its justice why not give the advantage of the doubt to law-abiding society until we find a better way to defend ourselves against the crime of the present day?

A symposium on this subject in Pennsylvania Farmer might be of interest. It would be interesting to see what your readers think of the Baumes law and how to deal with poultry thieves.—C. M. Rohrbaugh.

Make Correction on State Poultry Show

IN YOUR issue of December 3 I notice an article on page 11-551 in which you headline "Mercer County Poultry Exhibit Larger Than N. J. State Show."

You state that there were five hundred and ninety birds of various breeds entered at this show and for your correct information I wish to inform you that at the New Jersey State Poultry Show, held in Atlantic City in October, there were eight hundred and fifty-three birds all in paid entries. It was decided by the committee having this show in charge to hold a single-tiered show and, therefore, it was necessary to limit entries which was done by allowing only three to a class from one exhibitor. This rule was waived in one instance. Not only was the ballroom of the Steeplechase Pier filled but it was necessary to put nearly all breeding pens in an adjoining room with the pier amusement concessions. I also rejected entries of over one hundred birds.

Number of entries does not always indicate a quality poultry show and as this affair at Atlantic City was the first of its kind held direct by the State Association in conjunction with our annual convention which is an established institution it was not intended to try to put over a large show but one of quality and educational features and the success of the venture is attested by the fact of the many letters we have received from the exhibitors and others attending who have nothing but praise and congratulations and if a suitable hall is available it will be comparatively easy to triple the size of our State Show another year.—John H. Wood, Secretary.

Issue New Ruling for Motorists

AFTER January 1 it will be unlawful in Pennsylvania to:

Loan registration plates to another.
Fail to have windshield cleaner.
Fail to have rear view mirror.
Have any plates, cards or lettering of an obscene or vulgar nature attached to the car.
Have any posters non-transparent on the windshield or windows.
Drive with more than three persons on driver's seat.
Coasting down grade with gears in neutral.
Fail to report to police every accident where injury resulted or damage exceeded $50.
Deface, injure or damage any highway sign.
Park or stop in front of any private driveway.
Park within 25 feet of intersection.
Drive faster than 15 miles an hour when passing a school while children are going to or from the building.
Follow another vehicle closer than is reasonable and proper.
Operate a vehicle faster than 35 miles an hour on the open highway.
Fail to yield right of way to pedestrian crossing at a pedestrian crosswalk, except at traffic control points

for COLDS-ROUP-CANKER FLU-PNEUMONIA IN HOGS AND POULTRY

NOW, you can quickly stop Colds, and other similar diseases, in your hogs or your chickens. No need of individual dosing.

Colds, Roup, Canker, Infectious Bronchitis (Flu), and Pneumonia, all are diseases of the breathing passages. The more simple Colds often lead to the more serious bronchial and lung troubles. Many instances are reported where Flu has wiped out half of an entire flock, in a single week. It is just as prevalent and costly with hogs.

Easy to Stop Losses Now

Vapo-Spray and Flu-Koff Emulsion are a double treatment—a vapor of healing oils, to be sprayed in sleeping quarters and breathed into the bronchial tubes and lungs; and an internal medicine, given in the feed, to allay cough, reduce temperature and overcome irritation, like as if for a human being.

This treatment has been used by thousands of hog and poultry raisers with the same satisfactory results as obtained by our specialists during a year of testing it out.

Prompt Treatment Important

Don't neglect Colds, even if only slight—it is so easy now to control them. Have Flu-Koff Emulsion and Vapo-Spray on hand—give at the first signs of Colds or indications of Flu, such as wheezing, coughing and gasping for breath. And while prompt treatment is important, don't consider a pig or a chicken as good as dead if the Cold has "gone down" on the bronchial tubes or lungs—use Vapo-Spray and Flu-Koff Emulsion.

More than ten thousand drug stores, feed dealers and chick hatcheries handle these remedies, and will give you a copy of "The Lee Way" free book, which tells all about these diseases and their treatment. If no dealer at your town, write for book and agency terms.

LIKE FOR HUMAN BEINGS

Because diseases of the breathing passages in hogs and poultry are so similar to those affecting people, we had four leading physicians assist the twelve veterinarians of our Research Department in determining the ingredients and their percentages used in Vapo-Spray and Flu-Koff Emulsion. In all, sixteen specialists experimented over a period of one year to give hog and poultry raisers an easy and really effective way to stop these disease losses.

Vapo-Spray, gal. cans, $2; ½ gal., $1.25. Flu-Koff Emulsion, gal., $6.50; ½ gal., $3.50; qt., $2; 12 oz., $1. One gal. Flu-Koff Emulsion and one gal. Vapo-Spray is sufficient for a 4-day treatment for 80 hogs or 1,000 chickens. Smaller amounts in proportion. If ordered direct from our factory, express is prepaid. If in great need wire and we will ship C. O. D.

GEO. H. LEE CO., 50 Lee Bldg., Omaha, Nebr.

Insure *meat* and *flavor* in your cure

"We cured all our meat last winter with Old Hickory Smoked Salt. The following October our neighbors were complimenting us on our fine tasting hams with the genuine smoke flavor perfectly retained and free from the strong taste that meat frequently has after so many months in storage."
—Mr. and Mrs. Wilbur Harmon, West Point, Ind.

CURE your meat with Edwards Old Hickory Smoked Salt this winter and serve your family and friends with the choicest delicacies until the last mouthful is eaten. The hickory wood smoke and highest purity salt go through the meat together. They are readily absorbed by the fresh tissues and evenly distributed through them. Their combined preservative action begins immediately. Spoilage is arrested at its source. You save the smoke house shrink, labor and fire risk. No smoke-house needed. The blending of flavors, too, begins as soon as the Old Hickory Smoked Salt comes in contact with the fresh cuts. Smoke and salt and natural meat juices mingle. They develop a smooth, mild tang, ripening and mellowing the rich fats. This saves these valuable food elements that are lost by the old method of smoking. Meat cured with Old Hickory is delicious from the moment you take it out of the cure. And like old-fashioned fruit cake, it improves with age and grows richer and mellower with every added month in storage. Buy your supply today. Your dealer can supply it in ten-lb., trade marked drums only.

LIVESTOCK

Review of local market for week ending December 10, 1927: Receipts for the past week show a decided falling off, resulting in all classes selling higher. Compared with a week ago, beef steers fully 25c higher. Heifers and cows sharing advance, bulls up more. Stockers and feeders regained early week's decline, closing 25c higher; top beef steers, $15; several loads, $14.25@14.50; bulk, $11.50@ 13; bulk butcher bulls, $7.50@8.75. Heifers, $10@11; cows, $6.50@7.75; cutters, $4.75@6.50; most stockers and feeders $8.25@10. Calves steady; top vealers, $16.50; few selects, $17. Hogs, slow; tending lower.

Receipts for Saturday's market: cattle, 3 cars; 1 St Paul, 1 Canada, 1 Chicago; containing 90 head, 120 trucked in from nearby. Total cattle, 220 head, 15 calves, 458 hogs. Receipts for week ending December 10, 1927: Cattle, 49 cars; 15 Chicago, 10 Canada, 7 Penna, 6 St Paul, 6 Virginia, 2 New York, 1 St Louis, 1 Iowa, 1 Indiana, 1 St Joseph, containing 1377 head, 355 head trucked in. Total cattle, 1732 head; 64 calves, 2258 hogs, 68 sheep. Receipts for corresponding week last year: cattle, 156 cars; 39 St Paul, 35 Chicago, 33 Virginia, 17 Canada, 8 St Louis, 8 Penna, 4 Kentucky, 3 West Virginia, 2 Maryland, 3 Missouri, 1 Georgia, 1 Indiana, 1 Omaha, 1 Tennessee, containing 4351 head, 219 head trucked in. Total cattle, 4570 head, 1507 hogs, 37 calves, 90 sheep.

Eastern States Farmers' Exchange

The Ingredients Count

When all is said and done the grade of each ingredient used in mixing a formula has much to do with the value of the formula. Farmers—dairymen and poultrymen—know this to be so. A ration containing 200 pounds of 36% cottonseed meal, for instance, is not identical with a ration of the "same formula" containing 41% cottonseed meal. Nor does a mash containing 300 pounds of ground oats carrying excessive oat hulls, be these hulls pulverized to the consistency of flour, contain as much food value as a mash including 300 pounds of meaty, highgrade oats, be they only coarsely ground. There are different grades and differences within grades of all ingredients entering rations.

The success farmers are having with Eastern States feeds is largely due to the quality of the ingredients. The Exchange formulas, good though they be, are simple and public. They are being duplicated by numerous mixers as well as by farmers who purchase their own ingredients indiscriminately.

These duplicate formulas are distributed on a "just as good for less money" appeal, but the demand for genuine Eastern States rations steadily increases because the genuine rations contain high quality ingredients which produce results more than sufficient to offset any price difference.

Where records are kept Eastern States open formula feeds prove their worth.

Collectively through their Eastern States Farmers' Exchange organization, farmers are able to go into the feed and grain markets of the country and select the best ingredients obtainable for the purposes they have in hand. Individually farmers exercise no such control. That such control properly administered is worth much to feeders cannot be disputed. That the Eastern States Farmers' Exchange is administering this control to the satisfaction of poultrymen and dairymen is proved by the steady increase in the demand for Eastern States feed service on the part of the farmers who have tried it—more than 20,000 in eight eastern states.

For information on the Eastern States feed service for horses, poultry, and dairy cattle, the service which should not be confused with car door service offered by private manufacturers through dealers or groups of farmers, write the office.

Eastern States Farmers' Exchange

A non-stock, non-profit organization, owned and controlled by the farmers it serves.

Eastern Exhibitors Take Prizes

(Continued from page 3)

exhibited by Edellyn Farm, Wilson, Ill., and the grand champion female was Supreme Rosewood, exhibited by F. C. Baker, of Hickman Mills, Mo.

A total of 206 carloads of fat cattle was entered in the show with about 95 Aberdeen-Angus, 87 Hereford and 24 Shorthorns. Before these carloads are accepted for the show they are judged by a sifting committee who reject all cattle that do not come up to the required standard. The Aberdeen-Angus made a clean sweep in the carload division by winning the grand champion and reserve grand champion.

The fat wether and lamb classes were as large as usual and high in quality. The Pennsylvania State College exhibited the champion grade and crossbred wether. The grand champion lamb was purchased by the Stockyards, Inc., Chicago, at $1.85 per pound.

Chester-Whites Headed Barrows

The fat barrow show of nearly all the breeds was larger than at any time in recent years. The Chester-White headed the list with nearly 200 barrows. The Chester-White breed made a clean sweep of the championships. The Pennsylvania State College was a strong exhibitor of Berkshires and Duroc-Jerseys, winning champion single barrow in Duroc-Jersey and also the pen of barrows. In the Berkshire division they exhibited the champion pen of barrows.

In the carload division the grand champion barrows were Hampshires, exhibited by J. M. Ballard, Marion, Ind. These barrows weighed an average of 297 pounds and were sold at $12.50 per hundred. This is the ninth victory for the Hampshire breed in the last ten years. The breeding show of all breeds was light because of the lateness of the season.

The draft horse show was the best that has been held since 1921. The four major breeds, Percheron, Belgians, Clydesdale and Shire, had more entries and better quality than at any time in recent years. The tops of all breeds were outstanding. The entries came largely from the states in the Middle West, except the Canadians, who dominated the Clydesdale show. The large number of sales of stallions and mares that were made during the show indicates renewed interest in horses.

Polled Breeds Displayed

The Milking Shorthorns, Red Polled, Galloway and Polled Shorthorn breeders presented a creditable display of these breeds. All these breeds except Milking Shorthorns had both breeding and fat classes.

The grand champion sheep carcass was exhibited by the University of Wisconsin with a carcass from a grade Southdown lamb and the reserve grand champion went to the Pennsylvania State College on a wether carcass from a Southdown yearling. The grand champion carcass was sold at $3 per pound.

Breeders from the eastern section of the United States have become important exhibitors in recent years. The Pennsylvania State College exhibited steers, sheep and barrows. Most of the cattle from this institution placed well up in the money and the sheep and hogs won several championships and reserve championships. Other eastern exhibitors were: Milking Shorthorns, Alasa Farms, Alton, N. Y.; Bar-Non Ranch, Berlin, N. Y.; Webster Knight, Providence, R. I.; W. S. Martin, Plainfield, Vt., and Donald Woodward, LeRoy, N. Y. Herefords, St. Armour Co., Mortonville, Pa. Aberdeen-Angus, Briarcliff Farms, Pine Plain, N. Y. Sheep, Greatwood Farms, Plainfield, Vt.; Iroquois Farm, Cooperstown, N. Y.; Mrs. Hamilton, Pittsburgh; D. F. McDowell & Son, Mercer, Pa.; J. D. Larkin, Buffalo, N. Y.; Mountain Farms, Bradstreet, Mass., and J. B. Henderson, Hickory, Pa. Swine, Sycamore Farms, Douglassville, Pa. Horses, Hayfield Farms, Wilkes-Barre, Pa., and Sycamore Farms, Phoenixville, Pa.

Numerous meetings of record associations and other organizations were held during the week. Practically all record associations report renewed interest in purebred livestock and breeders generally seem quite optimistic about the future of the purebred business.

Champion and Reserve Champion Pen of Duroc Barrows owned by the Pennsylvania State College

Coal Tar Not Safe for Metal Roofs

Is coal tar all right on a metal roof to keep it from rusting? Will it injure the roof to use it?—J. S. T.

Coal tar is not considered a safe material to use on metal roofs, since ordinarily it contains considerable free acids, which may have a destructive action on both the galvanizing and the metal itself. One roofing firm recommends coal tar on galvanized steel roof, provided enough cement is mixed with it to neutralize the acids. Only by mixing this several days ahead and then testing it for acid could one be sure that it was neutral; and I do not know just what effect the cement would have on the weathering value of the coating, especially if more cement than needed was used.

Probably the best thing to use on a metal roof is a coating of first class asphalt paint and next best is red-lead and linseed oil, while a good cheaper paint is red oxide of iron and linseed oil.—I. W. Dickerson.

Storage Problem

Old Gentleman (seeing the small colored boy was having some trouble in getting away with the large melon he was trying to eat)—Too much melon, isn't it, Rastus?

Small Colored Boy—No, suh, boss, not enough niggah.

STOP Profit Leaks

Fight Udder Troubles

Poorly-filled milk pails are a disappointment—and a loss. When they occur, be sure the trouble is not under your very eyes.

Remember this—cows are nervous, sensitive animals. The slightest discomfort of the udder or teats is extra annoying during milking. The milk is held back—lost to you as surely as if the cow lacked the ability to produce.

Fight udder troubles constantly—the way the best dairymen in the country now do—with a can of Bag Balm, the great healing ointment. Bag Balm is a rapid antiseptic healer of all sores or burns, chaps, cracked teats, inflammation of the udder, caked bag, bunches, cow-pox, etc. It is clean and pleasant to use—cannot taint the milk. For any sore or skin trouble Bag Balm is sure relief.

Use Bag Balm liberally to keep your cows comfortable and productive. Big 10-ounce package 60c at feed dealers, druggists, general stores. Mailed postpaid if hard to obtain locally. Booklet, "Dairy Wrinkles" free on request.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical compendiums a farmer-stockman can obtain.

COW WITH SORE FEET.—I have a cow six years old that has matter in back part of foot between hoofs of both hind feet. She started the same way for the last two years. I used spirits of saults and a strong disinfectant but she did not get over it until late in the summer each year. The cows stand on concrete and have oat chaff for bedding. Last year they had sawdust. Last year half of hoof got rotten but grew out again. Her feet seem to be sore or tender all the time. My pastures are dry and so is barnyard. She never stands in gutter. Her feet are always dry as the platform is clear.—H. H. D., Honesdale, Pa. Clean the feet thoroughly and apply cotton, covering it with bandage. Either soak the foot in a 1-1000 solution of bichloride of mercury or pour such a solution on the bandage until it is soaked. Leave the bandage on for two or three days, keeping it moist. Repeat if necessary. After removing bandage keep the feet dry so as to harden the horn.

CALF BLOATS.—I have a calf about four months old. I was to raise this heifer but found her bloated. What can be the cause? Would it be advisable to keep or sell her? Have given soda and injection.—P. H. E., Preston, Md. Bloating is an indication of faulty digestion, overfeeding or obstruction. It may be corrected by cutting down the feed consumed; by the use of laxatives (salts, oils); by the judicious use of tonics, by changing the feed; or possibly by opening the rumen and removing the obstruction. It would be well to cut down the ration for a day or two and give two to four ounces of castor oil or some mineral oil, repeating the dose on the second day. One might give two tablespoons of Epsom salts and repeat, if necessary. The diet should be laxative in nature. Exercise should be provided. Free access to salt is desirable.

PARASITES IN HORSES.—I have a horse that shows signs of worms. What can I give him to get rid of them?—S. E. S., Honey Brook, Pa. One of our most prominent parasitologists recommends that the parasite or parasites infecting the animal be identified as treatment is based upon the kind of parasite and its location in the intestinal tract. The best policy is to consult your veterinarian and either secure from him a suitable worm capsule or have him treat the animal with an agent that will remove the parasites. Reinfestation should be prevented by attention to feed and water which may become soiled with eggs of the parasite.

POULTRY

700,000 CHICKS FOR 1928—We will hatch chicks from Jan. 10, 1928 on, from our fine range, healthy, vigorous stock of Barred and White Rocks, Rhode Island Reds, White Wyandottes, White Leghorns and Anconas. A Christmas Carol

By CHARLES DICKENS

MARLEY was dead, to begin with. There is no doubt whatever about that. The register of his burial was signed by the clergyman, the clerk, the undertaker and the chief mourner. Scrooge signed it. And Scrooge's name was good upon 'Change for anything he chose to put his hand to.

Old Marley was as dead as a door-nail.

Scrooge knew he was dead? Of course he did. How could it be otherwise? Scrooge and he were partners for I don't know how many years. Scrooge was his sole executor, his sole administrator, his sole assign, his sole residuary legatee, his sole friend, and sole mourner.

External heat and cold had little influence on Scrooge. No warmth could warm, no wintry weather chill him. No wind that blew was bitterer than he, no falling snow was more intent upon its purpose, no pelting rain less open to entreaty.

Nobody ever stopped him in the street to say, with gladsome looks, "My dear Scrooge, how are you? When will you come to see me?" No beggars implored him to bestow a trifle, no children asked him what it was o'clock, no man or woman ever once in all his life inquired the way to such and such a place of Scrooge.

But what did Scrooge care! It was the very thing he liked. To edge his way along the crowded paths of life, warning all human sympathy to keep its distance, was what the knowing ones call "nuts" to Scrooge.

Once upon a time—of all the good days in the year, on Christmas eve—old Scrooge sat busy in his counting-house. It was cold, bleak, biting weather, foggy withal, and he could hear the people in the court outside go wheezing up and down, beating their hands upon their breast, and stamping their feet upon the pavement stones to warm them.

(Continued to page 2)

We wish you all a Merry Christmas

A Christmas Carol

(Continued from page 1)

AFTER Scrooge growled at his nephew for inviting him to dinner and wishing him a Merry Christmas, growled at two gentlemen for asking him to give something to the poor and growled at his underpaid clerk, Bob Cratchit, father of Tiny Tim, for begging leave to spend Christmas at home, he went to the chamber once occupied by his dead partner and himself, now by himself alone.

Just as he was about to go to bed there was a clanking of chains and into the room, right through the panels of the door, which was locked and bolted came the ghost of Marley.

"MERCY, dreadful apparition, why do you trouble me," cried Scrooge. Why do spirits walk the earth, and why do they come to me?"

"It is required of every man," the ghost returned, "that the spirit within him should walk abroad among his fellow men, and travel far and wide; and if that spirit goes not forth in life, it is condemned to do so after death. It is doomed to wander through the world—oh, woe is me!—and witness what it cannot share, but might have shared on earth, and turned to happiness!

"A very little more is all permitted to me. I cannot rest, I cannot stay, I cannot linger anywhere. My spirit never walked beyond the counting-house—mark me!—in my life my spirit never roved beyond the narrow limits of our money-changing hole; and weary journeys lie before me!"

"Seven years dead," mused Scrooge. "And traveling all the time!"

"Oh! captive, bound and double-ironed," cried the phantom, "not to know that ages of incessant labor by immortal creatures for this earth must pass into eternity before the good of which it is susceptible is all developed. Not to know that any Christian spirit working kindly in its little sphere, whatever it may be, will find its mortal life too short for its vast means of usefulness. Not to know that no space of regret can make amends for one life's opportunity misused! Yet such was I! Oh! such was I!"

"But you were always a good man of business, Jacob," faltered Scrooge, who now began to apply this to himself.

"Business!" cried the ghost, wringing its hands again. "Mankind was my business. The common welfare was my business; charity, mercy, forbearance, and benevolence were all my business."

Scrooge was very much dismayed to hear the spectre going on at this rate, and began to quake exceedingly.

"Hear me!" cried the ghost. "My time is nearly gone. I am here tonight to warn you that you have yet a chance and hope of escaping my fate. A chance and hope of my procuring, Ebenezer."

"You were always a good friend to me," said Scrooge. "Thank'ee!"

"You will be haunted," resumed the ghost, "by three spirits."

THE first of the three spirits was the Ghost of Christmas Past, which took Scrooge back to the days of his boyhood and youth, showing him their joys and their lost opportunities.

The second was the Ghost of Christmas Present. It took Scrooge to the homes of his underpaid clerk and the nephew who had wished him a Merry Christmas, and showed him just how these kept the high day, and just how they regard the growling partner of the dead Marley.

The third was the Ghost of Christmas Yet to Come; and by the time it came Scrooge had resolved to change his mode of life.

"SPIRIT!" he cried, tightly clutching at its robe, "hear me! I am not the man I was. I will not be the man I must have been but for this intercourse."

"Good spirit," he pursued, as down upon the ground he fell before it, "your nature intercedes for me and pities me. Assure me that I yet may change these shadows you have shown me by an altered life! I will honor Christmas in my heart and try to keep it all the year. I will live in the past, the present, and the future, and I will not shut out the lessons that they teach.

Holding up his hands in a last prayer to have his fate reversed, he saw an alteration in the phantom's hood and dress. It shrank, collapsed, and dwindled down into a bedpost.

Yes! and the bedpost was his own. The bed was his own, the room was his own. Best and happiest of all, the time before him was his own, to make amends in!

"I will live in the past, the present, and the future!" Scrooge repeated as he scrambled out of bed. "The spirits of all three shall strive within me. Oh, Jacob Marley! Heaven, and the Christmas time be praised for this! I say it on my knees, old Jacob, on my knees!"

He was so fluttered and so glowing with his good intentions that his broken voice would scarcely answer to his call. He had been sobbing violently in his conflict with the spirit, and his face was wet with tears.

"I don't know what to do!" cried Scrooge, laughing and crying in the same breath; and making a perfect Laocoon of himself with his stockings. "I am as light as a feather, I am as happy as an angel, I am as merry as a schoolboy. I am as giddy as a drunken man. A merry Christmas to everybody! A happy New Year to all the world! Halloo here! Whoop! Halloo!"

Really, for a man who had been out of practice for so many years, it was a splendid laugh, a most illustrious laugh. The father of a long, long line of brilliant laughs!

"I don't know what day of the month it is!" said Scrooge. "I don't know how long I've been among the spirits. I don't know anything. I'm quite a baby. Never mind. I don't care. I'd rather be a baby. Halloo! Whoop! Halloo here!"

He was checked in his transports by the churches ringing out the lustiest peals he had ever heard. Clash, clang, hammer; ding, dong, bell. Bell, dong, ding; hammer, clang, clash! Oh, glorious! glorious!

Running to the window he opened it and put out his head. No fog, no mist; clear, bright, jovial, stirring, cold; cold, piping for the blood to dance to; golden sunlight, heavenly sky, sweet fresh air, merry bells. Oh, glorious! Glorious!

"What's today?" cried Scrooge, calling downward to a boy in Sunday clothes, who perhaps had loitered in to look about him.

"Eh?" returned the boy with all his might of wonder.

"What's today, my fine fellow?" said Scrooge.

"Today," replied the boy. "Why, Christmas Day."

"It's Christmas Day!" said Scrooge to himself. "I haven't missed it. The spirits have done it all in one night. They can do anything they like. Of course they can. Of course they can. Halloo, my fine fellow!"

"Halloo!" returned the boy.

"Do you know the poulterer's in the next street but one at the corner?" Scrooge inquired.

"I should hope I did," replied the lad.

"An intelligent boy!" said Scrooge. "A remarkable boy! Do you know whether they've sold the prize turkey that was hanging up there? Not the little prize turkey;—the big one?"

"What, the one as big as me?" returned the boy.

"What a delightful boy!" said Scrooge. "It's a pleasure to talk to him. Yes, my buck!"

"It's hanging there now," replied the boy.

"Is it?" said Scrooge. "Go and buy it."

"Walk-er!" exclaimed the boy.

"No, no," said Scrooge, "I am in earnest. Go and buy it, and tell 'em to bring it here, that I may give them the direction where to take it. Come back with the man and I'll give you a shilling. Come back with him in less than five minutes, and I'll give you half a crown!"

The boy was off like a shot.

"I'll send it to Bob Cratchit's!" whispered Scrooge, rubbing his hands and splitting with a laugh. "He shan't know who sends it. It's twice the size of Tiny Tim."

The hand in which he wrote the address was not a steady one, but write it he did, somehow, and went

(Continued on page 13)

Put ALL your cows on a profit basis

Kow-Kare safeguards the health of the whole herd—if fed regularly as a part of the winter-feeding program. Its highly-concentrated ingredients act directly on the organs of digestion, assimilation and reproduction. Cows in fair vigor are made more productive, more profitable. Animals of lowered vitality are built up to profitable productive yields.

Try dairying this winter on this safe-and-sane conditioning plan. Feed each cow with her grain ration a tablespoonful of Kow-Kare for one to two weeks each month. Note the increase in the milk crop—and the freedom from profit-killing disorders. Kow-Kare rationing costs only a few cents a month per cow. The investment returns itself many fold.

Condition your freshening cows

Give every freshening cow the benefit of the Kow-Kare invigorating, regulating action. After once using this famous aid at Calving you will never again be without it. Use a tablespoonful in the feed two to three weeks before and after.

For cows troubled with Barrenness, Retained Afterbirth, Abortion, Scours, Bunches, Milk Fever and similar troubles Kow-Kare is your reliable home-remedy. Full treatment directions on each can. Feed dealers, druggists and general stores have Kow-Kare, $1.25 for large size; $6.25 for six cans. Small can 65c. Send for free book, "More Milk from the Cows You Have."

DAIRY ASSOCIATION CO., INC.

Colorful Shrubs Brighten Winter Days

Some of Our Native Plants Carry Their Showy Fruits Until Next Season's Flowers

By EMIL KANT
Extension Landscape Architect, State College, Pa.

AT THIS time of year when the outdoor flowers have passed out of existence we sometimes wonder just why we have been denied their pleasant company during the winter months. The severe winters, of course, are the chief cause but even with cold winters and lack of flowers our grounds need not be wholly void of color if we would acquaint ourselves with some of the shrubs that carry their showy fruits until the next season's flowers put in their appearance.

Most of us are familiar with one or two of the berry-bearing shrubs and vines; others can name several, but only a very few who have taken the pains and time to look into the matter really know what a wealth of material we have with which to cheer our home grounds during the winter. Not only do we benefit ourselves by planting these fruiting plants, but we also furnish our feathered friends, the birds, with food at a period of the year when it is the most scarce.

Shrubs Serve Three-Fold Purpose

The following is a description of some of the most desirable shrubs and vines whose fruit is valuable either as a decoration on the grounds, as a decoration indoors or out, or as a food for birds. Almost all of these plants can serve all three purposes equally well, and, in addition, their flowers are attractive during the summer.

Possibly the best known and most beloved fruiting plant in this category is the Bittersweet (Celeastrus scandens). How many homes can one enter between the early days of frost in the fall and the first warm days in the spring without finding a few sprigs of this vine? Yet how few of these same admirers of the plant grow it on their own grounds. The Bittersweet makes itself at home practically anywhere; along a fence, on a bank, or in a shrubbery border. Remember, however, when planting it that it is a vine. There are several varieties of this vine but the above named is possibly the most satisfactory.

Next important among the showy berry-bearing shrubs are the hollies. In this group we have two distinct classes, the evergreen and the deciduous. Among the former, the American holly (Ilex opaca) is the best grown. It can be readily grown on the home grounds and is an excellent plant in combination with other broad-leaf evergreens or coniferous evergreens. At times the American holly grows to dimensions of a small tree, but if the space is small it can be kept in a shrub form. The Inkberry (Ilex glabra) is another attractive evergreen holly whose small shiny leaves and black berries will add a great deal to any planting. This shrub reaches a height of about five feet.

Needs Moist Place

Should there be a low, moist spot on the property, plant Winterberry, better known as Black Alder (Ilex verticillata). This shrub will grow in practically any type of soil although it thrives best in a moist, low spot. The height varies anywhere from five to ten feet. Its scarlet fruit is very attractive in the fall when the leaves have fallen. The Black Alder is by far the most showy of all the fruiting shrubs; its branches are literally covered from October until after Christmas.

There is no need for the grounds to look this desolate during the late fall

Another of the native hollies is the Smooth Winterberry (Ilex laevigata). It is very similar in all respects to the Black Alder except that the leaves of the former are more rugged and hairy.

As a group of plants the cornels are perhaps next in importance for their showy fruit. The fruit of the cornels will not, however, stay on the branches as long into the winter as those previously mentioned. To offset this they have a greater variation of color in their fruit combined with variation in size as well. The first of these plants of importance is the Red-Oiser Dogwood (Cornus stolonifera). It likes moist places but makes itself perfectly at home in any garden. It grows to a height of six feet but is generally considered full grown when it reaches about four feet. The white fruit is borne in flat clusters containing as many as 30 berries.

The Silky Dogwood (Cornum amonum) is similar in form to the Red-Oiser. Its stems are green and its fruit is blue. These beautiful blue berries are borne in flat clusters about three inches across, and they persist well into the winter. There are any number of dogwoods that will do well and whose fruit will enhance the surroundings of any home, and the two mentioned above will only serve as a class introduction.

Fruiting shrubs furnish food for the birds when it is scarce

Following the dogwoods are the viburnums, many of which have fruit just as attractive as that of the dogwoods. The familiar Wayfaring Tree or Hobble Bush (Viburnum alnifolium) has a berry which hardly can be surpassed. Its only drawback is the softness and fleshiness which makes it less permanent in the winter garden than some of the other berries. The shrub, however, is well worth giving a place in any garden. The fruit is dark purple in color and is, at times, a half-inch long.

The High Bush Cranberry (Viburnum opulus) is another shrub with large, fleshy berries. They resemble the cranberry very much, hence its name. Unlike the other viburnums the fruit of this one clings to the branches all winter, and their bright red color gives an added touch wherever the shrub is planted. The plant reaches a height of about eight feet if conditions are at all favorable. Two other viburnums valuable for their fruit are the Arrow-Wood (Viburnum dentatum), a shrub six to eight feet high having clusters of dark blue berries in the fall, and Withe Rod (Viburnum cassinoides) whose fruit is also dark blue and very abundant.

In addition to attractive flowers and fruit the dogwoods and viburnums are invaluable in any shrubbery planting for the fall coloration of their foliage. The foregoing shrubs comprise only a small number of the berry-bearing group but the merits by which they have been selected are their late fruiting and their suitability to any garden, small or large, and finally the fact that they are all found native in practically every county in Pennsylvania.

Are Other Native Shrubs Worthy of Mention

There are hosts of other native shrubs of which no mention has been made because they bear their fruit earlier in the season, and as such, they are not particularly valuable in the winter garden. There is, however, another group of shrubs of which mention should be made and that is those which have been brought here from other lands and which have made themselves perfectly at home. This group must be treated separately as they have proved their value, and, hence, are entitled to a great deal of consideration.

Success

HE HAS achieved Success who has lived well, laughed often, and loved much; who has gained the respect of intelligent men and the love of little children; who has filled his niche and accomplished his task; who has left the world better than he found it, whether by an improved lotus, a perfect poem, or a rescued soul; who has always looked for the best in others and given the best he had; whose life was an inspiration, whose memory a benediction.

Comments on the Week's News

THE Department of Agriculture states that its inquiry into farm tenantry in the United States shows that 38.6 per cent of the farms of the nation are operated by tenants; that there is very little absentee landlordism, because nine-tenths of the owners live nearby. It also states that fifty per cent of the tenants began life as farm hands, and most of them hope to become farm owners. Another interesting fact is that the average farm landlord owns two farms. Some economists claim that farm tenantcy as it exists in this country is but one of the logical steps to farm ownership.

✦ ✦ ✦

If Philadelphians really hoped that the Republican leaders would risk the reaction of the nation to choosing Philadelphia in which to hold the next nominating convention, those hopes went glimmering when the committee selected Kansas City. The fame of Philadelphia in political matters has become such that many people throughout the nation could not be persuaded that it would be a wise or safe thing to do. Real political leaders are profound students of psychology.

✦ ✦ ✦

Momentous questions break upon us so fast that we don't finish hollering about one until another is upon us. It is not long since the "Pittsburgh-Plus" plan was being criticised from one end of the country to the other. We haven't heard it mentioned in a long time, although the system was continued until the present. Now, the Bethlehem Steel Company announces that it has abandoned the Pittsburgh-Plus method of arriving at prices in different parts of the country. Probably the delivered prices will be the same, but the objectionable "plan" has been laid aside.

✦ ✦ ✦

The New York egg market has been having for some time the anomalous experience of quoting brown eggs five to eight cents per dozen above prices for best white eggs. Ordinarily, the difference is the other way. The explanation is that the supply of white eggs is greater than the supply of brown eggs just now, and since there is a large and definite demand for both kinds the price of white eggs naturally settles when the supply is heavy. New York egg prices have been going down steadily for five years, but it is thought the lowest point in the cycle has been reached.

✦ ✦ ✦

Resolutions were passed in the senate at an early session refusing to admit Senators elect William S. Vare, of Philadelphia, and Frank Smith, of Illinois. Since the revelations of the Senate's investigation committee into the methods practiced to get the nominations the action of the Senate was anticipated. The Public Ledger says the rejection of Pennsylvania's representative throws the accredited credentials back into the teeth of the voters of Pennsylvania. That may be true as to the voters of Philadelphia and Dauphin Counties, but the rest of the counties will not feel any humiliation. Mr. Vare had a firm friend at court in the person of Senator Reed, of Pennsylvania.

✦ ✦ ✦

As usual, there are many wanting advice on whether to sell apples and potatoes now, or wait for a possible higher price. Of course, we do not know. It is usually a good general rule to sell when the price is fair to good and when there is an active demand. Unless storage facilities are very good, and unless marketing can be done more conveniently later, the average producer usually misses out by holding perishable products for a speculative purpose.

Christmas and the Radio

THOSE of us who were born and raised in the country enjoyed Christmas, of course. Plain and simple as was the observance it always has been a season of joy and gladness even in the remote regions. The inexpensive presents, often created by the loving hands of dear ones, brought to young and old alike joy and gladness befitting the season.

But lately we have learned that we have been missing much that helps make the yuletide joyous. Until the advent of the radio most of us country people missed the inspiring music which city people enjoyed, and which adds so much to the pleasures of that season. Much of the finest music has come from the masters who have been inspired by the Christmas spirit,—music which so elevates one that he can almost see the angels who first brought the glad tidings to earth. But during all the years, until recently, this music was not for the ears of those who dwelt in the lonely places of the earth. Only those who lived in or near the great cities could enjoy it.

But now, all is changed. The tens of thousands who have that greatest of modern wonders,—the radio—can tune in and hear and enjoy the best interpretation of the Heavenly chorus that man can produce. No normal human being can hear the music of the Christmas season without feeling,—without being,—better.

Are Juries Infallible?

FOR centuries we have proceeded on the assumption that the fate of men and nations was safe in the hands of a "jury of peers." Just when the jury system was established seems to be unknown. It probably grew out of the custom among the Anglo-Saxons of northern Europe when a man charged with crime could summon twelve men to swear to and prove his innocence. Later the government chose the twelve who decided upon the evidence.

But grave doubts are being expressed in recent years. The modern trial has developed into a procedure so spectacular and mystifying that the natural intelligence and normal impulses of juries are unsettled if not destroyed. Trial by jury in the United States has become a battle of wits between opposing lawyers. Theoretically, a court trial is an honest effort on both sides to arrive at the truth of a matter. Practically, it frequently is an effort to conceal truth and befuddle the minds of jurors.

Fortunately, the judges of the courts have, as a class, retained the respect and confidence of the people. Their training and position gives them the ability to see through the smoke screens laid by lawyers. They are able pretty generally to weigh quite accurately the testimony. But in few instances do they have the authority to pronounce judgment. They act on the judgment of juries. For this reason many people are recommending that the jury system be dropped, and a judicial bench be adopted, and at least three judges hear the evidence and decide the guilt or innocence of a prisoner as well as pronounce sentence.

It will probably be a long time before so violent a change will be made, but it is worth thinking about.

Pershing Addresses Farm Leaders

IN AN address before the annual meeting of the American Farm Bureau the other day, General Pershing made some statements that greatly pleased that body and called forth shouts of "Pershing for President." He declared that the plight of the small farmer of the United States is due in large measure to inadequate national policies. He said that the upbuilding and maintenance of a healthy farming industry is vital to national defense. The strength of agriculture lies in the small landowner. The concentration of ownership of farms in the hands of few should not be permitted, he declared.

General Pershing may have been thinking as a general when he referred to the importance of agriculture as a means of defense. If so, he spoke better than he knew. The maintenance of an agriculture conducted by landowning, home-loving, liberty-loving farmers is the best defense against things more ominous than foreign invaders. They are the best defense against extreme radicalism in political and economic theories, and those who would undermine and overturn the government. They are the first and will be the last line of defense against over-greedy capitalism as well as against dangerous foreign-born agitators.

General Pershing does well when he pleads for the maintenance and welfare of the American farmer.

State Grange Meeting

THE fifty-fifth annual meeting of the Pennsylvania State Grange was held in Erie, December 13-15th. The Grangers of Erie County, as well as the people of the city of Erie, did everything possible to make the stay of the visitors pleasant, and they succeeded. The attendance was large and the delegates exhibited the usual earnestness and enthusiasm. J. Audley Boak, of Lawrence County, acting Master, conducted the business in an able manner. This is the off year as to elections, but it was necessary to elect a State Master to fill the unexpired term, and also a few members of important committees. The election resulted as follows:

Master, E. B. Dorsett, Tioga County; Executive Committee, Kenzie Bagshaw, Blair County; Finance Committee, John S. Dale, Centre County; Director Keystone Exchange, G. W. Schuler, Berks County. More next week.

BOOSTS KETCHAM BILL

May Have Private Thoroughfares—Government Not Able to Handle Business Enterprises

Washington, D C

THE Ketcham bill providing for the maintenance of agricultural trade commissioners in foreign countries to extend the trade in American agricultural products has been given a boost by Secretary of Agriculture Jardine, who says we need agriculturally minded men in foreign markets who will supply our farmers with information just as other industries are supplied with information by trade commissioners of the Department of Commerce.

Suggest Private-owned Roads

A move toward private ownership of improved through-route highways is seen in a resolution introduced by representative Allen J. Furlow, of Minnesota, creating a commission to study proposals for the establishment of a system of express highways to be built by private capital, and which would become public property after they were paid for out of toll charges.

Urge Merchant Marine Development

Development of a merchant marine under private ownership, but under government ownership if necessary, was urged by the National Rivers and Harbors Congress at its annual session in Washington.

Authorize Construction of Railroads

The Interstate Commerce Commission during the past year has authorized the construction of 1027 miles of new railroad and the abandonment of 830 miles. Issues of railroad securities to the amount of $1,157,368,222 have been authorized.

Always Gets Into Trouble

Whenever the government undertakes to engage in business enterprises, not strictly government business, it gets into trouble, according to President Coolidge, in explaining his position on government operation of business enterprises. The federal government, he says, has expended a great deal of money in an effort to irrigate land, and sometimes the results have been that the Secretary of the Interior has been burned in effigy for his efforts.

Complain About Handling of Parcels

The Post Office Department is being urged by various organizations to improve parcel post service. At present there is much complaint against the way in which parcels are handled in the mails.

Highway Bill One Billion

The annual highway bill of the country is in excess of a billion dollars, including all expenditures of the federal, state and local governments, for construction, maintenance and administration. Of this amount the federal expenditure is less than eight per cent, and the states alone spent of their own funds more than six times the amount they received from the federal government.

Take Census of Canned Goods

An annual census of canned goods production in the United States has been completed recently by the Census Bureau, in which it is shown that in 1927 the green and wax bean pack amounted to 4,037,303 cases and 639,464 cases respectively. The pack of peas amounted to 12,963-917 standard cases of No. 2 cans.

Decrease in Alcoholism

Evidence pointing to a decrease in alcoholism since the prohibition law went into effect has been obtained by the Children's Bureau of the United States Department of Labor in the course of a study of delinquent children and their parents, according to Grace Abbott, chief of the bureau.

Pork Prices Low

Pork prices generally are now at the lowest level in three years in the wholesale markets, according to the Institute of American Meat Packers. Smoked hams are now wholesaling about 25 per cent lower than a year ago. Hog prices, in keeping with the lower value at which pork products have been selling, also are considerably lower than they were at this time last year. In addition to lower domestic prices for pork, a sharply decreased demand from Europe for American pork products has been responsible for the declines in hog prices.

Navy Buys Western Beans

Navy beans grown in Michigan and New York, which heretofore have been bought in large quantities by the Navy, are not wanted, the Bureau of Supplies and Accounts of the Navy Department purchasing these supplies from the Pacific Coast bean growers. In recent years owing to the moist condition of the New York and Michigan beans they could not be stored well and the Navy lost heavily on them. This has led the Navy to eliminate the eastern grown beans from its purchases. It is said, however, that when the beans of New York and Michigan again grade No. 1 under United States Standards, they will be purchased if the bids of the producers are acceptable to the Navy buyers.—E. E. R.

GIVE SCHOOL AID

More Schools Consolidate—Susquehanna Finishes Farm Census—Will Start Air Line Hauling.

Harrisburg, Pa

EIGHT more projects for consolidation of schools have been given sanction of state educational authorities in the last few months and it is expected the number of such propositions approved by the Commonwealth for 1927 will run close to a record. When the state began to give aid in such matters eight years ago there were not many more than fifty, whereas there are now scores of consolidations. The counties about Philadelphia lead, but Allegheny has in the neighborhood of forty consolidations. Franklin leads in the southern tier of counties and Bradford in the northern. Lancaster, Crawford, Tioga and Susquehanna have also been marching on.

Speeding Bulletins

State printing authorities have started speeding up bulletins so there will be plenty for winter reading. Among the publications made available are those dealing with the corn borer and other pests, weeds, household insects and grading with reports on analyses of seeds. Much attention is urged for the latter as the best means of combating troubles in the field. The weed bulletin is to be the theme of various addresses during the winter.

Susquehanna First

Susquehanna County has furnished the first complete county list of reports for the triennial farm census under way for the State Department of Agriculture and Dr. C. G. Jordan, Secretary of Agriculture, has complimented the officials in charge for the thoroughness with which the information has been gathered and compiled.

First Air Lines

The first commercial airplane companies to obtain certification from the Public Service Commission are announced and will go into the general hauling business shortly. One of the companies is located in the heart of the South Mountain fruit belt. Some trial flights with produce are to be made to see how it stands the altitude and whether rates sufficient for the service can be obtained.

Paying for Cows

According to figures at the Capitol there has been a pretty steady payment of about a quarter of a million dollars for cattle killed because of tuberculosis each month. This includes the federal as well as the state pay for animals taken.

Ask About Programs

The State Capitol is getting numerous inquiries from other states about the extent of the meetings and the contents of programs for the gatherings here next month. Probably more people will come from Maryland and New Jersey than heretofore and Washington will be well represented.

INCREASE MEMBERSHIP

Would Continue Morris County Fair—New Jersey Seed Gives Best Results—Control the Cane Borer.

Trenton, N. J

AT THE annual meeting of the Morris County Board of Agriculture at Morristown in early December, a report of the membership canvassed this fall showed nearly 100 per cent increase in members for 1928. The board went on record as favoring the continuance of the Morris County Fair, despite active real estate developments which have turned many farms into home sites. Officers for the coming year were elected as follows: President, Calvin Lawrence, Dover; vice president, William M. McIntyre, Morristown; secretary-treasurer, Walter E. Sutton, Morristown. Andrew R. Scully, of Long Valley, was elected a member of the state legislative and executive committee, and John R. Bunn was named delegate for one year and Calvin Lawrence for two years to the New Jersey State Board of Agriculture.

Passaic Reports T. B. Progress

Approximately 72 per cent of the dairy cows in Passaic County have now been tested for bovine tuberculosis under the accredited herd plan of the State Department of Agriculture. In conjunction with the testing of the herds, the state bureau veterinarians have also inspected 117 poultry flocks comprising 14,726 birds for contagious disease and 167 hogs were inoculated against cholera. The Japanese beetle inspection during the last fiscal year called for the examination of 56,080 packages of farm products for shipment to places outside of the quarantine area. In conjunction with neighboring counties, agricultural officials have worked out a much better understanding between growers and the management of the Newark Farmers' Market, particularly with reference to market service and the license situation.

Grange Members Entertain

The Mannington Grange of Salem County entertained the County Board of Agriculture at Salem on December 13. A large attendance banqueted and discussed current farm problems affecting southern New Jersey. H. E. Taylor, executive secretary of the New Jersey Federation of County Boards of Agriculture, discussed the 1928 program of farmer organizations in New Jersey and A. M. Hulbert, assistant state director of extension, reviewed recent activities of the college field personnel and the county agent program. —W. H. B.

Discuss Japanese Beetle Work

A conference of Japanese beetle officials and members of the legislature from the counties of Gloucester, Camden and Burlington met at the request of Secretary of Agriculture of New Jersey, William B. Duryee, to discuss methods for the suppression of the beetle during 1928. The meeting was held on December 9 at the Japanese beetle laboratory, Moorestown. U. I. Safro, recently appointed by Secretary William Duryee to assume charge of suppression work in this state was officially introduced to the public at the luncheon given the members of the legislature in the counties affected by the beetle.

Doctor Pierstorff Goes to Ohio

Dr. A. L. Pierstorff, extension specialist in fruit at the New Jersey Agricultural College, New Brunswick, has tendered his resignation to become effective on January 1, 1928. Dr. Pierstorff has accepted a position with the Ohio Agricultural College.

Norman Fogg Appointed President

Norman Fogg, Hancock's Bridge, was appointed president of the Salem County Board of Agriculture at its annual meeting on December 13th. Mr. Fogg takes the position held for many years by former Senator J. Gilbert Borton, Woodstown.

Study Sweet Potato Seed Source

Officials from the Iowa Experiment Station have been spending considerable time in the sweet potato growing areas of New Jersey investigating reliable sources of seed for next year's crop. Recent tests in Iowa during 1927 disclosed facts that New Jersey strains outyielded those from other sections of the United States.

Control Looks Promising

Indications now point to a solution of the cane borer problem in the berry fields of Atlantic County. Experiments carried out the past season under the direction of Arthur Eldred, county agent, Mays Landing, show that the situation looks very promising for a satisfactory control. —A. K.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KESTER

THIRTY Kansas farmers visited eastern cities recently. They spent one day in Philadelphia and three members of the Pennsylvania Farmer force acted as Scout Masters for them while here. It was an interesting and enjoyable experience and we shall not soon forget that day. They ranged in age from middle age to what might be called old age,—one of them being seventy-eight. But they were all eager and interested as boys at the new experiences and in the things they saw. None of them was unsophisticated in the way that many eastern people think respecting Middle West farmers. They were well informed on the historic things they saw, even though this was their first opportunity to actually see them.

◆ ◆ ◆

WE MET them early in the morning at the B. & O. terminal, where two buses were chartered in which to view the city. It was a miserably bad day to go sightseeing, owing to the six inches of snowy slush which fell the day before. But they were not daunted and we set out first to see the big terminal elevators of the Pennsylvania R. R. Co. The size and capacity of these elevators was a revelation to me as well as to them. Since most of the visitors were big wheat raisers they were naturally interested in the methods by which great quantities of wheat are handled and loaded on ocean-going vessels.

◆ ◆ ◆

THE next visit was to the Navy Yard. Permission was given to drive the party in and through the yard, and a competent and obliging escort was provided. We were all interested in the new recreation center where the enlisted men are encouraged to spent part of their time. Here is a big gymnasium, a library, a reading room and every comfort giving a touch of home life for the men's enjoyment. All enjoyed the privilege of going on board the Olympia,—Admiral Dewey's old flagship in the battle of Manila Bay. These Kansas farmers were just as well posted on Admiral Dewey and his career as any of us.

◆ ◆ ◆

OF COURSE, these liberty-loving Kansas farmers wanted to see the State House, or old Independence Hall. It was with uncovered heads and reverent tread that they viewed the things in this shrine of American independence. The sight of the old Liberty Bell awed them into silence. It is good to know that men yet reverence the things of the past and are loyal to old-time principles. Those of us who are close to them sometimes forget what they stand for, and may sometimes be living examples of the old saying that familiarity breeds contempt.

◆ ◆ ◆

THE woman attendant at Congress Hall told us what most of us forget at times, that Carpenter's Hall is really the birthplace of American independence, and that Independence Hall is the cradle. The Continental Congress met here for fifty-one days and conceived the general plans, later moving to Independence Hall. Loading up again we went to a big newspaper plant and viewed the city from the tower, 340 feet high. Then rode past Franklin's grave, to the Betsy Ross House, Christ Church and across the Delaware Bridge.

◆ ◆ ◆

ONE sad note marred the joy of the day. One of the visitors became faint after leaving Carpenter's Hall, and stopped a few minutes. Two stayed with him and called an ambulance. His companions were not told until evening that their friend had passed away before reaching the hospital. Evidently, the exertions of the day had been too much for a possibly weak heart.

The Cheerful Plowman

Sounds at Night

MILL MIFFORD'S dead, poor careless Mill! He's sleeping yonder on the hill with flowers above his head, he was a neighbor kind and true, he gave each man his mead and due,—except himself! He's dead! 'Twas just like this; Mill drove himself through storm and wind, from bench to shelf, from Genesis to Acts, without due care of his good form, he dashed around in every storm—these are the solemn facts!

Said I to Mill one ripping day, "You boob, you'll throw your health away, you'll freeze your spinal cord; you'll contract seven kinds of flu, you'll frost your gullet black and blue! Put on some furs!" I roared! "No man is made of tempered steel, no man can stand this awful deal through which you plow along; take my advice, don't spoil your fun ere half your mortal span is run, keep warm, and well and strong! Don't make a baby of yourself, don't hide away upon a shelf, I don't mean that at all; but when the wind roars from the poles and you are right between the goals why foolishly endure, when seven yards of fuzzy fur will make your motors sing and purr,—prevention beats a cure!"

He didn't heed, he milked his cows and hammered at his stubble plows when winds were on a spree with scanty clothing draped around his shaking form from chin to ground, he dared the powers that be! He bared his breast to every gale that gnashed its teeth and switched its tail, he boo-hooed Johnnie Frost, he looked the ice man in the face—yes, thinly clad he drove his race, but at an awful cost! He's dead, and I'm alive today; I feel as fit as flowers in May, I feel as brisk as sin, but I'm not acting without sense and braving maddened elements in clothes that let them in!—J. Edw. Tufft.

GARDEN AND TRUCK

GILBERT S. WATTS, Editor
Logan Spring Farm

It Is Time to Prepare for Next Years Garden

CHRISTMAS is here! What an occasion! Celebration of our Savior's birth, home comings, reunions, Christmas trees, presents, dinners, greetings and well wishing to everyone. How good it is for us to participate in this pause from the everyday things.

I wonder how about that Christmas dinner? Some of our readers may remember that last year we listed over a dozen vegetables which by careful management of storage facilities could be made available for Christmas dinner and lots of other wintertime dinners. Let us recount part of that list then check over and see which things are lacking in our cellar and which we could and should have there at this season. Cabbage, of course. Potatoes and possibly sweet potatoes. Celery by all means. Pumpkins and squashes, you bet. Parsnips, some should have been dug in November and stored under moist earth or sand. They are too good to wait for until spring. Rutabagas, not as commonly used as they should be but truly delicious. Carrots, beets, turnips, all easy to grow and easy to keep. For the radish lovers the big crisp winter radishes which may be stored like other root crops. To complete the list: onions, leeks, celeriac, turnip rooted parsley and salsify (oyster plant).

How many did you count that you now have on hand? For myself I counted nine: celery, beets, carrots, parsnips, rutabagas, onions, cabbage, squashes, pumpkins. No doubt some of you can do better. At any rate 1928 seed catalogues are soon coming along, a few are here already, and now is the time to line things up for that most interesting of all gardens, next year's garden.

I sometimes think it a blessing that Nature sends old Jack Frost along in all his severity each November thereby winding up that year's gardens, wiping the slate clean ready for a new start each spring. True we live but one life. Yet how like little lifetimes, each all its own, it is to live with a garden through successive growing seasons, each spring witnessing the rebirth of plant life, the summer bringing its full days of sunshine along with the trials of enemies and drought and lastly the autumn fulfilling the promise of a harvest, a reward.—Gilbert S. Watts.

Pastures Are Like Poor Relations

IN ALL of our trips to Europe we have been greatly impressed with the large acreage devoted to the growing of grass other than legumes. These permanent meadows receive especial care, are well drained, and are fertilized regularly. As a result they furnish very cheap feed for livestock during the grass season, and maintain many more head of cattle on a given area than we do in this country. Much grass land is somewhat acid in its reaction and is especially fitted for the growing of grasses other than legumes. Through proper fertilization they are able to double the protein content of grass, figured on dry basis, and more than double the yield—a 400 per cent protein per acre.

Pastures in this country are like poor relations—very sadly neglected. We do pay attention to clovers and alfalfas, or at least think we do, but when it comes to grass land we are inclined to let nature take its course, and suffer large loss in consequence. Grass responds quickly to fertilization.

A new method of handling grass lands has come into practice in Germany and England in the last three years, a description of which may interest you. The fields are fenced off into four sections. The ground is fertilized with minerals and with nitrogen. The milch cows are turned into one field and the grass pastured down to a point, when the cows are transferred to the next field, and the young feeding stock comes in and pastures it still further. This rotation is kept up, and as each field has been pastured down a top dressing of nitrogenous fertilizer is applied. This rotation is kept up all during the grass season, and this has permitted them to maintain twice as many head of cattle per acre as has been the custom through the old method of fertilizing once or twice during the season. Under this plan the fields are fertilized with a low cost protein-forming element, nitrogen in quickly available form, some light or ten times during the growing season, and this low cost protein is converted to high value digestible protein and is eaten by the livestock when it is most digestible. The cattle tote the milk themselves to the barns, and the droppings are left on the field. It is indeed a very cheap method of stock feeding. Their experience shows that the grazing season is materially lengthened both in the spring and fall where lands are properly fertilized. Fertilized grass is less influenced by dry weather, and the freezing point is reduced by fertilizing.

This system is being experimented on in England, and the early reports are that they have done even better in England than in Germany, as the climate is better suited for the production of grass. They feel that when this system is extended, as it easily can be, it will materially reduce their need for importing oil cake and other fodders, and will further simplify their foreign exchange situation. Dr. Sidney B. Haskell, director of the Massachusetts Agricultural Experiment Station, reports very interesting results and gains on land only suited for grazing, through soil building.

American Farmer Neglects Pasture

Dry residues from mixed grasses show that about twice as much nitrogen and potash are found in these residues as phosphoric acid and lime, but the latter elements are very necessary in producing a nutritious grass.

We cannot but feel that the American farmer through his neglect of pasturing is overlooking a very important item in his feed bill, and that through developing grass lands he can reduce his tilled fields somewhat, which might have some effect on agricultural surpluses, and still make a materially better financial showing than he now does. The extension of the corn borer may force a greater utilization of grass in the Corn Belt sections of the United States.—C. H. M.

I Learned a Lesson In Radio Buying

I BOUGHT my first radio receiving set from a traveling agent who declared his outfit was the best thing on the market. It was a complicated device of many parts, but it gave me good service for perhaps six months; then something went wrong with the "insides." Being unable to repair the trouble myself, I tried to get in touch with the agent, but after making numerous inquiries, I learned that he had left the county without anyone knowing his address. My next idea was to write the manufacturers. This I did, and five days later I was notified that my particular radio model was no longer being made and that repair parts were not carried in stock. As all efforts to get adjustment proved futile, I was finally compelled to consign my radio to the junk-pile where it remains to this day.

Decide to Buy Reliable Set

I lost more than $50.00 on the deal but the experience taught me a lesson. When I decided to buy another radio set I first made sure that it was manufactured by a reliable company who had been in business long enough to justify its reputation. I made certain that the model I selected was well-advertised in newspapers and magazines, and I also inquired as to the company's nearest service station.

When I had satisfied myself on these points, I made a selection, and the set came up in every way to my requirements. When any minor repairs were needed, I knew just where to get them, and I had the company's guarantee of satisfaction or my money back. This set cost me twenty dollars more than the first but I estimate that I saved several times this difference by buying an outfit made by a company that can be relied upon.

Make Investigation Beforehand

Fly-by-night radio companies and salesmen are numerous in many rural districts, and their sole purpose is to separate a farmer from his money. Their usual argument is a very low first cost, and a guarantee of service for possibly a year. The company is prepared to side-step the claim, in various ways, and the purchaser finds when it is too late that he has no recourse, whatever. This trouble can be eliminated by making an investigation beforehand. It takes only a little time to do this, and one cent spent in establishing a company's reputation, may mean a dollar saved later on.—F. R. C.

OUR YOUNG PEOPLE'S FORUM

Letters From Forum Members and Friends

Dear Forum Editor:—As I write, I hear the sleet beating against the windows and the wind howling around the corner of the house in true winter fashion. It is really December—yet I can hardly believe my eyes when I look at the calendar and see the figures "25" in flaming scarlet. What a charm that day holds for people! There is a proverb, I believe, which says, "Do not believe anything you hear, and only half of what you see." I wonder if my optic nerves are deceiving me,—can it be true that the blessed day is only three days away. It can't be three and yet it is.

December is really the best month in the whole twelve. The world seems to be in a good, generous, free-hearted mood. It is a month of peace on earth, good will towards men. When each man loves his neighbor and all join in a common rejoicing to celebrate the birthday

WINTER PRANKS

of our Lord, Jesus—ah! that is indeed the time of times.

The tang of cedar, of fragrant pine, is already in the air. The papers are full of ads, "Do your Xmas shopping early." Mysterious packages, bundles of all shapes and sizes, are arriving even at this early date. The enchantment of Santa Claus is woven. One cannot hold out against such eloquent pleadings as the small ones utter. It is indeed a time of merry making, this month of December.

Then the 24th comes with its suppressed excitement. The day drags through, night comes and the Christmas tree is borne in in state. After a short supper, the members of the family, who are old enough, bundle

THIS YULE LOG WILL BRIGHTEN SOMEONE'S HEARTH

up warmly and go out to sing armed with lanterns.

Then the clear, strong voices float down the street on the clear night air, faintly at first, then gradually strong. "Peace on earth, good will to men"—those oft-repeated words with their ever-new charm. And up above the stars hold their reveries, remembering that night so long ago in old Bethlehem. Oh! It is all so beautiful, so wonderful—my heart thrills at the thought.

Finally their voices, the voices of the people, recede into the distance, "Silent Night, Holy Night, All Is Calm—"

But have courage dear cousins, I am going to stop. Thank you for reading this loving epistle.—Emalie Marvel, (X), Chester County, Pa.

Merry Christmas

I WISH all of you a very Merry Christmas. I hope Santa Claus has all sorts of surprises tucked in your stocking. During the Christmas holidays write and tell me all the good things old Kriss Kringle left with you. I'll be anxiously waiting for your letters.

THE FORUM EDITOR

Dear Forum Editor:—Hello! May I join your Forum page? I am eleven years old and am in the fifth grade. I love to go to school and I hope all of my Forum cousins do also.

We have chickens, a mule and two pigs. One pig is large and the other is small. We call the large pig Tubby because he is big and fat. We call the small pig Petsy because he is a pet. When you say "Petsy, Petsy," he will come to you.

We play show or movies either one, just like Margaret Andrew, but we do not play in the cellar. We play in our play house. Our play house is the eastern part of our house. It is lots of fun.

I have two pets, a dog and a cat. The dog's name is Rover. He is an Airedale, has curly hair and a short tail. The cat's name is Tommy. He is all gray. Tommy is a big cat. When I pick him up he starts to purr. I love Tommy.

I will close with best wishes to the Forum page.—Katherine Madden, Camden County, N. J.

Dear Forum Friends:—For pets I have a pony, two cats, a dog and one pigeon which I like very much. The pigeon will sit on the fence and you can go up to him and he will eat out of your hands. I am twelve years old. I like the Forum very much.—Melvin C. Wisner, Baltimore County, Md.

Dear Forum Editor:—This is the first time I wrote to the Forum page But I always read the letters. I live on a farm. I have about one-half mile to go to school.

Winter is coming now and it is getting very cold. It is nearly time for Santa Claus to come down the chimney and bring you lots of presents. Now, boys and girls, don't forget to hang your stockings at the fireplace.

We will have a Christmas party at school. We will have dialogues and recitations. I am sending you some riddles.

1. When is a baby not a baby?
2. What is that which the more it is cut the longer it grows?
3. What four letters would frighten a thief?—Susan Derstine, Montgomery County, Pa.

Dear Forum Editor and Friends:—I am a girl eleven years of age. I have been reading the Forum page for some time and think it is very interesting. We have cows, chickens, horses, pigs and a pet cat called Tabby. She is a very playful kitten.

I take great interest in music and take lessons every two weeks during school days and every week during vacation. I am a student at the Oberlin High School and am very busy with my school work and also have a recitation to study for the Sunday School Christmas Service.

I will close, wishing you all a Merry Christmas and a Happy New Year.—Elizabeth Bingaman, Dauphin County, Pa.

Dear Forum Editor:—At home we have two little pussys and one big one. They do not have names. They are black and white and blue and white. We have 300 chickens. We don't get many eggs now. We have pigs. Here is a cake recipe:

WHITE CAKE

½ cup butter and lard
1 cup sugar
2 cups cake flour
2 level teaspoons baking powder
3 egg whites
Two-thirds cup milk
½ teaspoon flavoring extract

Cream the butter and lard. Add sugar, gradually creaming the mixture well. Sift the flour measure, then sift three times with baking powder added to creamed butter, lard and sugar; add a little flour, then a little milk, and so on, alternating until all is used. Beat the batter hard after each addition of milk and flour. Add flavoring, now fold in the stiffly-beaten whites of eggs and put the batter either in two layer-cake pans or in a sheet pan, baking in a moderate oven about 35 to 40 minutes.

I baked it for my birthday cake. It is great.—Clarence E. Bucher, Northumberland County, Pa.

When did you have a birthday, Clarence? Did you have a party?

THE FORUM EDITOR.

Dear Forum Friends:—We live on a farm. We have a pony which is now six years old and we have three horses and a tractor to work our farm. We raise peaches, grapes, chickens and guineas. I have two little white dogs and they both are the same color. Their names are Barney and Nige, and I forgot to tell you that my pony's name is Tommy.—William Macrie, Atlantic County, N. J.

"WHEN THEY SAW THE STAR, THEY REJOICED WITH EXCEEDING GREAT JOY."

Word Contest Prize Winners

Florence Y. Moyer, (X), Bucks County, Pa.

UNDER TWELVE

Bertha Bieber, (X), Butler County, Pa.

OUR LITTLE FOLKS PUZZLE CORNER

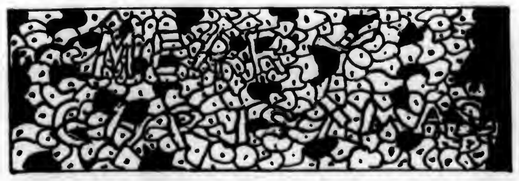
DEAR LITTLE FOLKS:—In this little fancy-pane window at the bottom of the page you will find a message I want to give to every one of you just as soon as possible. You will notice that most of the odd-shaped little pieces have a black dot in them, and, if you will fill in with pencil or crayon all of those pieces in which you find a black dot, you will get my message. Some of the pieces are already filled in, and it looks as though there might be a Christmas tree peeping out from the right-hand side. There are some little pieces that do not have the dot in them, and those pieces must not be filled in or you won't find out what I am saying to you. When you have found this message, you may write or print it on a postcard or send it in a letter so that it reaches me by December 30th. Please tell me your name and post office address, in what county you live, when your birthday comes and how old you are. The prizes go to the ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle published in the December 3 issue (the one about the furniture) is: CHAIR, TABLE, BED, MIRROR, BOOKCASE, STOVE, REFRIGERATOR, CARPET, PIANO, CLOCK, PICTURE, DRESSER. So many of you enjoyed helping this family get their furniture moved that maybe you would like to help out some more later on.

The prize winners are: Katie Billek, age 10, New Geneva, Pa.; Doris Bryson, age 8, West Sunbury, Pa.; Leon Kirk, age 12, Warfordsburg, Pa.; David Leasure, age 10, Ruffsdale, Pa.; Malvene Martz, age 13, Delmont, Pa.; Elizabeth H. Moore, age 9, Elkton City, Md.; Cora E. Orr, age 9, Bridgeton, N. J.; Pauline Weaver, age 10, Zullinger, Pa.; Robert Welshroi, age 8, Dushore, Pa.; Glenn E. Welshaar, age 12, Gettysburg, Pa.

P.S.—I hope Santa Claus is very good to you all this year and that you and all your families have a very happy Christmas. I know I feel very glad that I have so many friends among Our Little Folks. With best wishes, your friend,

THE PUZZLE EDITOR



PASSING EVENTS IN PICTURES

1.—Mount St. Michael, a medieval abbey in northern France, stands on the summit of a rock 275 feet high. The population of the town is only 230 but thousands of pilgrims come to it every year.

2.—The Duchess of York receiving a bouquet from some school children after opening the Crippled Children's Hospital at Exeter, England.

3.—The life-like stone elephants that guard the entrance to a zoo near Los Angeles, California, need a bath once in a while.

4.—The geese is to Germany's Christmas what the turkey is to America's Thanksgiving. Here are some geese from Lithuania, being fattened in a large establishment in Oderbruch in which thousands are fed each year.

The Surest Way to Get Winter Eggs

What Is Your Experience?

AFTER several years of study and experiment with chickens, we have arrived at at least one worth while idea, and that is to buy the very best grade of day-old baby chicks we can afford. Our most successful year in the business was when we ordered early in January the baby chicks we needed to make sure of pullets enough to fill the laying houses. We have capacity for eight hundred, and bought eighteen hundred baby chicks. Usually about half the brood are cocks, and one needs a margin to offset losses and give opportunity to cull out any pullets that do not measure up to the standard when the time comes to put them up for winter. (Or even before.)

We like to start them the last of March or first week in April, and were able to do so on this good year. It was a fine lively bunch of fluffy little yellow balls that were placed under the warm, dry hovers in the brooder houses, and they grew almost beyond belief.

We use the feed rations endorsed by the Poultry Division of the New Jersey School of Agriculture, and from all appearances and results would highly recommend it to any one. Our losses were slight, but not quite so low a percentage as Mr. Kester writes about with his last year's flock. (If you have not read his experiences, be sure to hunt up page ten of the Dec. 10 issue.)

We Market the Cockerels

It would save us a great deal of money if we could know cocks from pullets the day of their arrival. But since no one seems to be able to hatch pullets alone, the thing to do is find a way and a market to dispose of cockerels at a price that nets you a little at least. Where you have so many, and wholesale is necessary, you are likely to lose money feeding cockerels.

Your happiest days are when you have thoroughly dusted eight hundred beautiful young hens and put them in laying quarters. And then, too, when eggs are seventy-five cents a dozen, and you can gather from forty to fifty dozen each day.

I know from the many letters on my desk from you women that there are a great number of you in the chicken work. Let us hear of your experience in recent years, or of your plans for this approaching season. Maybe you can help some of us or perhaps we can help you. Tell us of your greatest success in the business. Or if you have failed, it may be that your experience will save other women from such disaster.

Will you write me at once and let us hear what you have done? Suppose we have a real chicken number early in January! The Christmas rush is over and it's high time we were planning for the baby chicks for 1928. Your chicken hints should make a very interesting and helpful Home Page. Be sure to write promptly. Send your letters to Home Page Editor, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa. Give me your full name and address, please.

——Merry Christmas——

My Greeting

I AM thinking of you today because it is Christmas, and I wish you happiness; and tomorrow, because it will be the day after Christmas, I shall still wish you happiness, and so on clear through the year. I may not be able to tell you about it every day, but that makes no difference; the thought and the wish will be here just the same.—Henry Van Dyke.

Every good wish from your Home Page Editor.—Gertrude S. Stewart.

Hospitality Typifies Yuletide Spirit

ONE Christmas Day when I was twenty I had to face a new situation. My sister who shared with me a small apartment in the Northwest was all of kin I would see in our home so many thousand miles from other folks. Often we had wondered just how December 25 could be Christmas to us.

You may have heard that hospitality abounds in some sections, and I soon learned that it did here, for we were invited to spend Christmas Eve and Day with a family we had known but two months. There were two rollicking boys in that home and you know what fun Christmas is for the six and seven year olds.

We helped them decorate the tree and living room, and were noisily awakened at six next morning. Picture if you can the Merry Christmas we were having, when we might have been left alone in the lonesomeness of our little apartment, as so many are.

I remember that season of 1916 as vividly as if it were here today, and I like to tell it, always hoping that folks will open their hearts and homes at Christmas. There are some about you who are heart-sick and lonely. Give them a breath of your love and hospitality this Christmas.

Invited to Christmas Breakfast

Another year when I was far, far from home, a Christmas breakfast was given eight of us who were unable to reach home for the holidays. 'Twas a beautiful morning when snow and ice filled the trees and walks with sparkling diamonds. Our hearts caroled hymns of the Christ Child as we strolled toward that peaceful fireside. We were greeted warmly and listened to choirs rendering music that only Christmas can inspire. After the eighth record we were called by chimes to the breakfast room and served with food for both body and soul.

The soft glow of Christmas candles furnished the only lights in any part of the house. The table wore a centerpiece of poinsettias surrounded by some small branches bearing many small pine cones. Red ribbons extended from the cones to each place, where small gifts had been placed. Our menu was delicious.

Fruit Cup (oranges and grapefruit)
Fried Chicken
Buckwheat Cakes with Maple Syrup
Candy Nuts Raisins
Coffee
Love and Fellowship

After breakfast we returned again to the fireside and spent a happy hour planning a visit to the nearby hospital where more good cheer would be spread among those who must have Christmas Day in bed.

The contagion of happiness is so wonderful at Christmas. What can we do this year to give joy to the many less fortunate than we?—Betsey Ford, Md.

——Merry Christmas——

Flares and Straight Lines

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5925.—**Four sizes: 6, 8, 10 and 12 years. A 10-year size will require 2⅞ yards of 36-inch material with ⅜ yard of contrasting material 18 inches wide for facing on collar and sleeves. Pattern, 10 cents.**

5910.—**Three sizes: 16, 18 and 20 years. An 18-year size will require 1¾ yard of 54-inch lining and 4⅝ yards of 32-inch material if made with the collar. If made without the collar 3⅜ yards will be required. Pattern, 10 cents.**

Send 16c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

——Merry Christmas——

Let's Give Imagination a Chance

DO NOT make the mistake of "flooding" the children with gifts of playthings at this Yuletide Season. Too many toys clog the child's imagination and destroy his ingenuity.

One of my neighbor girls spent a few days visiting a much-loved auntie. There she became attached to an old, battered, indestructible dolly. She had several handsome, luxuriously attired dolls at home but this one without any clothing at all, became her constant companion. How often the little ones choose simple toys that can be played with, far rather than elaborate, expensive gifts that must be kept on a shelf.

Too many toys bring dissatisfaction. They soon become stale and commonplace. If one is given at a time, great interest and delight in variety of games in which to center it, furnish entertainment for many days.

And above all, let your children have a place for their toys, be they few or many. I know a family where there are several children. They have six rooms in their house and it is impossible to walk through any one of the rooms at any time. There are too many toys. They are seldom played with even though always lying around. Often I spy the whole group somewhere outside inventing happy games using none of their many toys, but the crudest sort of make-believe materials.

If indulgent friends give too many toys to your children this year, be wise, and place a few of them away for dull, rainy days. Then they will bring joy.—Clarice Raymond, N. Y.

——Merry Christmas——

Uncooked Sweets

STUFFED PRUNES

Soak prunes over night, dry them, cut lengthwise, remove stones, and allow to dry until they are just moist. Stuff with nuts, marshmallows or a filling made of a mixture of chopped nuts and raisins or apricots. Roll in sugar.

STUFFED DATES

Wash dates, dry them, cut lengthwise, remove stones, and stuff the same as prunes or with peanut butter or candied ginger. Roll in sugar.

PEANUT BUTTER CANDY

1½ cup stoned dates
½ cup peanut butter
⅝ teaspoon salt
¼ cupful powdered sugar

Wash and dry dates, put through a food chopper, add peanut butter and salt. Mix and roll into small balls and roll in sugar. Let stand a little while to dry.

PARISIAN SWEETS

Use equal quantities of figs, dates and nuts. The nuts may be omitted and prunes or raisins substituted. Take out the stones and put figs, dates and nuts through a food chopper. Mix well, mold small pieces in any desired shapes and roll in a little powdered sugar.—N. Y. College of Agriculture.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

BACK to the gang of prisoners I went, and in half an hour, the guards were stirring us up with bayonets for march. We went across the stream and were put in a great cow shed that the Moravians used for their stock. I gathered that I was the cause of this; Fanning was making sure of his prisoners; there were to be no more accidents.

Sometime later I got to talk to Pugh. He pondered over the business for some minutes and then said slowly:

"I may be wrong, but this looks to me like a good guess. Your uncle or one of his men put that shot through Fanning's hat. Then he wrote him that if he didn't be good, he would put it lower next time."

"But he might have been caught—in the middle of camp. The man's too reckless," I protested.

Pugh shook his head. "The chances weren't so bad. Most of the militia lack uniforms. One more or less is hard to note. And the men are shooting at targets all the time.

"For a while, though, you may be safe. Till Fanning takes your uncle, or gets a strong enough guard around himself. Take my word for it, he won't make a good target out of himself again."

This was Thursday. We stayed in the cowshed two days more. Saturday there was a good deal of stirring about. Waddell's men moved to the south. The other troops were getting ready for the march. Sunday morning early we started out, back east this time and bound at last for Hillsboro.

The march took us four days. It was still rainy but not so bad as the week before. We made fair time, and since the army was smaller and supplies easier to get, we fared better. The line of prisoners was getting longer, as men were picked up. Every day, too, men were coming in to take the oath, and to pile arms in the wagons that followed the army. "They're bringing in trade guns and old muskets," Pugh commented one day. "There's still many a good rifle hid away. And plenty of good men who haven't taken the oath and won't."

John Gillespie, I heard, had taken to the hills, after a narrow escape. Husband and Hunter were supposed to be up in Pennsylvania by this time. I wondered about Zion Alexander and Robertson and if they had set out for the Holston country yet.

Of my uncle I heard nothing more. No more reports came of raids on foraging parties. Perhaps he was only biding his time, I thought, and realized that if he were he was showing good judgment. Fanning kept patrols out all the time, although he never headed one, and it was reported that he had offered double the usual reward for an outlaw if anyone brought in Daniel Craig. As the men who marched with me remarked, two hundred pounds and two thousand acres of land was enough to stir up a good many men, inside the army and out, to deadly activity.

Thursday we were within a few miles of Hillsboro, but halted and made camp. Special orders came out that arms and all equipment were to be furbished up. The men were busy all evening cleaning. This duty did not extend to the prisoners. The more dragged we looked, the better. Hillsboro had been of a sort, the rebel capital, and it was to be entered in conquering style.

There were few uniforms, but in order to give some impression of uniformity in costume, each man was ordered to cock up his hat and put a sprig of oak in it on the left side. The parade was to impress Hillsboro, but there was more to come later that would impress the town still more. A guard told us what it was, and grinned sourly to note how we took it.

"Hangings."

The court was to hold at once, and some number of us—a dozen was one guess—were to be taken out and strung up. Thus was fear to be put into the hearts of the men of the back country.

In the talk that ran on around me from day to day I learned why Hillsboro was to be so honored. It was the seat of the court for the county, but that was not the only reason. Here in September of the year before, Regulators had closed the court, whipping Fanning, whipped Williams, an attorney, burned Fanning's house and caused Judge Henderson, thereafter called "Slippery Dick," to run away in the night. In March the Regulators again held the town and court could not be held. Maddock's Mills, where the Regulators had held their first meeting back several years ago, was near by. The place was a hotbed of the Regulation, therefore, it was to have its lesson.

It was that evening, I think, that the guards brought over a new prisoner to our camp. He came attended by several soldiers and an officer, so we guessed him to be of some importance. He was.

"In the assembly four years ago," one told me in a whisper. Thomas Person was his name. He had not been at Alamance. Perhaps he had been on the way there as he had been captured some distance from home.

LATE that night we had another addition to our number. Horsemen rode over to us after dark. One dismounted and stumbled past the guard.

"Make your will," warned a voice. I recognized it for Fanning's.

We gathered around the new comer. It was Merrill, the man who had been given his freedom to pursue Husband. Now he was back, and without a prisoner.

"Yes, I saw him," Merrill said to the questions, "he was well on his way north. By now he's safe. So is Hunter. I did the business I went for."

He was despondent, as well he might have been after what Fanning had said to him. He crouched by the campfire for a long time and said nothing.

"We'll all hang," he muttered finally. "Any man who was at the battle is doomed. What folly. I'm too young—so are you. We should have stayed out of this. We'll hang."

HE SLEPT near me and badly. I woke often to hear him turning and thrashing about. He talked to himself in his sleep, too, and twice I heard the words, "We'll hang," muttered again, in the accents of resignation and despair.

In the morning a salvo was fired, perhaps to warn the town to be on the lookout. Then in we marched. The governor and his staff, very brave in their uniforms, went ahead. Behind came the slim company of mounted men. Then came three companies from Dobbs County with artillery. There followed the militia men from Carteret, Beaufort, New Hanover—these were new names to me, but the prisoner next me named them over—from Orange—our men cursed their loyal neighbors and got prodded by the guards. Most wore homespun; there were a few uniforms among the officers; muskets were common; rifles usually matched buckskin. The lines were ragged.

Nevertheless this was an army. It had fought and won. It had crushed the Regulation. So the groups of country folk along the road did not jeer, even if they had dared. As we came along, surrounded by guards with fixed bayonets, the silence of the spectators grew intense. We were the proof that the governor and his army were supreme. Some of the men with me had ruled in Hillsboro a few months before. Now they walked with their heads down and arms bound behind them. Women at the side of the road whispered:

"Which one is Husband?"

The ringleaders were safe, but few knew it. And lesser men could be hanged as well. Even on the gallows which hanged men of no particular importance the country folk, coming to town on market day, would look with some awe and remember the might of the Governor and his law. So His Excellency may have reasoned.

The town itself was a poor thing. Fanning's house, the most pretentious private dwelling, had been burned the fall before. The other houses were of frame or logs, small structures. The courthouse itself was a big barnlike affair and of no particular size. Our gang of prisoners would almost have filled it.

The stout cabins had been set aside for jail room. We formed in line in front of them. Two officers came over to us. They began to call a roll. Man after man stepped out and was herded to the right. Presently there were only fifteen of us left, Pugh, Merrill, Person and myself among them.

Pugh grinned at me.

"Sheep and the goats. They're going to center on a few of us. Those fellows get to wait."

The men in the group at the right were marched in one of the houses and guard set. Finally one of the officers came up to us.

"To the left—face," he ordered. "Forward."

We stepped off again. I had thought our marching for the day was done, and whispered to the guard at my right.

"Where to now—?"

He kept his face straight ahead, military fashion, but out of the corner of his mouth, he muttered:

"Now you'll catch it. We're taking you to the court."

The crowd in the main street delayed our progress. Soldiers dismissed from formation, a few townspeople, a lot of curious and sympathetic folks from the country, jammed before the doors of the courthouse. Our guard thrust vigorously through, with elbows and musket butts.

"Are these the men they're going to hang, Ma?" I heard one barefooted ten-year-old ask.

There were few comments that I could hear. So far as I could tell the crowd was mostly sympathetic, and the soldiers interested in us chiefly as a spectacle. Our guards, indeed, treated us with a little more consideration, as if the danger in which we stood enhanced our importance.

AWAY was made finally and we filed into the room. Up near the front, a big table had been set up. Three gentlemen in wigs and robes were behind it. A dozen scared looking countrymen were herded together at one side. Judges and jury were ready. There was to be no delay.

Our place was a sort of railed-in pen. There were no benches and hardly enough room for us to stand. We crowded in and a double row of guards formed around us.

I looked for Tryon. He was not there, but a second after our arrival, he came in the door. The officers jumped to their feet precipitately; soldiers throughout the audience prodded the rest of the crowd into rising; and the governor came down the aisle amidst a very respectful silence. In the midst of that silence a deep voice spoke.

"There's the blood sucker."

It was Pugh. A dozen outraged guards reached for him with musket butts, six officers dashed over in profane anguish of mind, but the damage was done. Tryon was red as a turkey-cock, but he preserved his dignity.

"Less noise in the presence of the court, gentlemen," he insisted and the men who were thrusting at Pugh subsided.

Tryon took his seat, not at the table, as I had expected, but to one side. I gathered then that this was to be a trial in regular form and His Excellency was only there to see that justice was done.

(To be continued next week)

34 per cent linseed meal	51.20@51.75

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .52	$ .52	$ .50½	$ .56
Eggs, fresh gathered extra firsts (N. Y.)	.48	.47½	.53½	.44½
Potatoes, 120-pound sack (Philadelphia)	2.50	2.45	2.37½	3.50
Steers, good to choice (Lancaster)	13.87½	14.00	13.87½	8.37½
Hay, Number 2 timothy, baled (Phila.)	17.50	17.50	16.50	23.50
Wheat, No. 2 red winter (Philadelphia)	1.37	1.38	1.32	1.06¾
Oats, Number 2 white (Philadelphia)	.64	.64	.61½	.59¾

Demand Slow in Most Markets

Review of the Week Ending December 17

POTATOES—Potato prices held steady throughout the week but trading was slow in practically all markets. Supplies were moderate to liberal. Maine and New York State shipping points reported growers holding stock for higher prices. In Philadelphia there was a fairly good demand for the best offerings but ordinary stock sold very slowly.

APPLES—The apple markets were rather dull although prices of fancy stock showed little change. Some of the poorer stock was hard to move and dealers were forced to lower prices. The holiday demand had not yet begun but on Monday, December 19, there was a slightly better demand and the trade seemed more optimistic.

LIVESTOCK—Practically all classes and grades of livestock were lower than last week at Chicago. Hogs were weak while beef steers dropped sharply. She stock was about steady on the lower grades, but top grades weakened. Veal calves were lower and stockers and feeders declined. Practically all grades of sheep and lambs sold at lower prices.

GRAIN—The wheat market was weaker due to the relative stocks in this country and Canada, combined with the larger crop in Argentina. Increased receipts of corn caused prices to drop around 2c per bushel. Receipts of oats were light and the market firm. Rye prices showed practically no change and the market was firm.

HAY—The hay markets were quiet and prices were steady. Receipts were moderate at most points although receipts of the lower grades were more than ample for the demand. Top grades were scarce and firm. Timothy was irregular in the eastern markets but alfalfa was firm.

BUTTER—Prices of 92 score butter held firm during the week with the eastern markets unchanged. Prices in Chicago declined one cent per pound. Receipts were light due partly to the recent storm delaying the movement of cream from the farms and the shipment of butter to distributing markets.

EGGS—The New York egg market was irregular. Mixed colors and brown eggs dropped sharply on Wednesday but trading was more active at the lower price levels. At the close the market was firmer with extra firsts somewhat higher. Many of the chain stores were buying medium grades of nearby white eggs and these were somewhat higher than last week.

POULTRY—Live fowl were in heavy supply in New York and prices declined, but the quality was somewhat better. Chickens were in rather light supply and the market was firm, with small fancy chickens in demand. Broilers were scarce and steady in price. Receipts of fresh killed chickens were liberal with most of the stock rather ordinary. Fancy chickens were scarce and firm. Fowl were firm but the weather in general was unfavorable for the movement of dressed poultry.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

TODAY, as I write this column there are nearly two weeks till Christmas and the markets are already preparing for the great event. From the northern woods carloads of Christmas trees are rolling into the markets to brighten the day. Busy hands have fashioned holly wreaths and laurel ropes to decorate our homes, churches and stores. Mistletoe with its dull white berries is coming from the South.

Every part of the land sends its contribution for this Christmas season. Texas sends the strutting turkey gobbler, New Jersey the bright colored cranberries and Pennsylvania and many other states the red checked apple. Nuts of all kinds from California and the southern states will snuggle beside golden oranges in many a stocking.

After all, Christmas is the children's day and although it has been observed for thousands of years, it is always new and each year brings fresh joys. My boys are just at the age when Santa Claus being the greatest thrill. They haven't come to the time when they wonder how he can crawl down the chimney, or why there are so many Santas on the street.

Letters Written to Santa Claus

Letters have been written to Santa Claus and presents ordered for all of us, including Skipper, the terrier. I am scheduled to receive a pipe and a train with lights on a track. Mother is to get an "air train." Their eyes sparkle when I read "'Twas the night before Christmas" and the littlest one scurries around trying to find the "mouse."

Most of us remember Christmas when we were small and the rush in the morning to see what was in our stockings. Every Christmas my father would hire a horse and carriage from the livery stable and we would all bundle up for the long twomile drive to Grandfather's farm. Automobiles were a novelty then, but the drive with the horse was something to remember. The hostler used to put bells on the harness and they would tinkle all the way. The best time was once when the snow was too deep for the wagon and we had a sleigh instead.

At Grandfather's were dozens of Cousins, Aunts and Uncles and we children had wild times before dinner. For some reason, that I did not understand at that time, we were usually shooed out-of-doors. Then the Christmas dinner and with the long table, it seemed our plate would never reach us. We boys never ate bread and butter, it didn't leave enough room for the turkey and the candied sweet potatoes. There was pie, cake and candy and then we were through. I can still remember that "after Christmas dinner feeling." Then came the gifts, something for everyone and as I remember it was often the least expensive things that gave us the most pleasure. At last as afternoon drew on, the horse was harnessed and the drive home began. Livery stable horses always travel faster when pointed towards home and sleep would make the ride still shorter.

Mother used to read poems and stories on Christmas and today we are telling them to our boys and each new Christmas is added to our store of memories. There is one story of Christmas that never grows old; it is the one about the shepherds tending their flocks at night, the birth of the Babe in the manger and of "the heavenly host praising God, and saying,

"Glory to God in the highest, and on earth, peace, good will toward men."

A Christmas Carol

(Continued from page 29)

downstairs to open the street door, ready for the coming of the poulterer's man. As he stood there, waiting his arrival, the knocker caught his eye.

"I shall love it as long as I live!" cried Scrooge, patting it with his hand. "I scarcely ever looked at it before. What an honest expression it has in its face! It's a wonderful knocker! Here's the turkey. Hallo! Whoop! How are you! Merry Christmas!"

It was a turkey! He never could have stood upon his legs, that bird. He would have snapped 'em short off in a minute, like sticks of sealing-wax.

"Why, it's impossible to carry that to Camden Town," said Scrooge. "You must have a cab."

The chuckle with which he said this, and the chuckle with which he paid for the turkey, and the chuckle with which he paid for the cab, and the chuckle with which he recompensed the boy, were only to be exceeded by the chuckle with which he sat down breathless in his chair again and chuckled till he cried.

Shaving was not an easy task, for his hand continued to shake very much; and shaving requires attention, even when you don't dance while you are at it. But if he had cut the end of his nose off, he would have put a piece of sticking-plaster over it and been quite satisfied.

He dressed himself "all in his best," and at last got out into the streets. The people were by this time pouring forth, as he had seen them with the ghost of Christmas present; and walking with his hands behind him, Scrooge regarded every one with a delighted smile. He looked so irresistibly pleasant, in a word, that three or four good-humored fellows said, "Good morning, sir! A merry Christmas to you!" And Scrooge said often afterward that of all the blithe sounds he had ever heard, those were the blithest in his ears.

He went to church, and walked about the streets, and watched the people hurrying to and fro, and patted children on the head, and questioned beggars, and looked down into the kitchens of houses, and up to the windows; and found that everything could yield him pleasure. He had never dreamed that any walk—that anything—could give him so much happiness. In the afternoon he turned his steps toward his nephew's house.

He passed the door a dozen times before he had the courage to go up and knock. But he made a dash and did it.

"Is your master at home, my dear?" said Scrooge to the girl. Nice girl! Very.

"Yes, sir."

"Where is he, my love?" said Scrooge.

"He's in the dining-room, sir, along with mistress. I'll show you up-stairs, if you please."

"Thank'ee. He knows me," said Scrooge, with his hand already on the dining-room lock. "I'll go in here, my dear."

He turned it gently and slided his face in round the door. They were looking at the table (which was spread out in great array); for these young house-keepers are always nervous on such points, and like to see that everything is right.

"Fred!" said Scrooge.

Dear heart alive, how his niece by marriage started! Scrooge had forgotten, for the moment, about her sitting in the corner with the footstool, or he wouldn't have done it, on any account.

"Why, bless my soul!" cried Fred, "who's that?"

"It's I. Your Uncle Scrooge. I have come to dinner. Will you let me in, Fred?"

Let him in! It is a mercy he didn't shake his arm off. He was at home in five minutes. Nothing could be heartier. His niece looked just the same. So did Topper when he came. So did the plump sister when she came. So did every one when they came. Wonderful party, wonderful games, wonderful unanimity, wonderful happiness!

But he was early at the office next morning. Oh, he was early there. If he could only be there first and catch Bob Cratchit coming late! That was the thing he had set his heart upon.

And he did it; yes, he did! The clock struck nine. No Bob. A quarter past. No Bob. He was full eighteen minutes and a half behind his time. Scrooge sat with his door wide open, that he might see him come in.

His hat was off before he opened the door; his comforter too. He was on his stool in a jiffy; driving away with his pen as if he were trying to overtake nine o'clock.

"Hallo!" growled Scrooge in his accustomed voice, as near as he could feign it. "What do you mean by coming here at this time of day?"

"I am very sorry," said Bob. "I am behind my time."

"You are?" repeated Scrooge. "Yes. I think you are. Step this way, sir, if you please."

"It's only once a year, sir," pleaded Bob. "It shall not be repeated. I was making rather merry yesterday, sir."

"Now, I'll tell you what, my friend," said Scrooge, "I am not going to stand this sort of thing any longer. And therefore," he continued, leaping from his stool and giving Bob such a dig in the waistcoat that he staggered back into the tank again, "and therefore I am about to raise your salary!"

Bob trembled, and got a little nearer to the ruler. He had a momentary idea of knocking Scrooge down with it, holding him, and calling to the people in the court for help and a straight-waistcoat.

"A merry Christmas, Bob!" said Scrooge, with an earnestness that could not be mistaken, as he clapped him on the back. "A merrier Christmas, Bob, my good fellow, than I have given you for many a year! I'll raise your salary and endeavor to assist your struggling family, and we will discuss your affairs this very afternoon over a Christmas bowl of smoking bishop, Bob! Make up the fire, and buy another coal-scuttle before you dot another 1, Bob Cratchit!"

Scrooge was better than his word. He did it all, and infinitely more; and to Tiny Tim, who did not die, he was a second father. He became as good a friend, as good a master, and as good a man as the good old city knew, or any other good old city, town, or borough in the good old world. Some people laughed to see the alteration in him, but he let them laugh and little heeded them; for he was wise enough to know that nothing ever happened on this globe for good at which some people did not have their fill of laughter in the outset. His own heart laughed; and that was quite enough for him.

He had no further intercourse with spirits, but lived upon the total-abstinence principle ever afterward; and it was always said of him that he knew how to keep Christmas well, if any man alive possessed the knowledge. May that be truly said of us, and all of us! And so, as Tiny Tim observed, God bless us, every one!

County News and Comment

Lackawanna County, Pa.—We have had so much rain the last month the dirt roads are in an awful condition. The weather continues changeable. Farmers have caught up pretty well with their fall work. Some fall plowing done. Rye looking good. Butchering is the order of these early winter days and housewives are busy caring for the meat canning and curing it for future use. Beef cattle are low in price. If great crowds of shoppers are a sign of prosperity, then we are a prosperous county for when I went to the city to do my Christmas shopping I could hardly get through some of the streets and stores were lined with people afoot. One had to step lively owing to the great throng of autos going in every direction. Eggs are scarce and high in price. Hay $16@18, according to quality; butter, 52c; cabbage is going slow.—L. A. K., December 14.

Lancaster County, Pa.—Heavy rain and finally snow fell the beginning of December. The gunning season did not produce the rabbit dinners that were anticipated. Game seemed to be plentiful during the summer, but apparently found shelter during the gunning season. Tobacco buyers are now visiting the farmers and some have sold for 12c and 2c and some as high as 15c and 2c. This is not considered as high as the growers expected. All live stock is high. Prices: geese, 22c; chickens, 18@25c; butter, 50c; eggs, 55c. Wheat, $1.25; mill feeds are advancing.—R. C. H., Dec. 12.

Lebanon County, Pa.—We had ideal weather conditions this fall to harvest the corn crop, nearly all the corp is husked. Much corn fodder is hauled away. A good many cars of potatoes were shipped to the Phil delphia markets this fall. Much plowing done this fall which will lessen spring work along this line. Farmers are getting ready for the winter by sawing wood and hauling coal. Many silos are being filled this winter for the markets this coming spring. We are having light snow at this writing. Now is the time to have the radio set up to listen to the music and addresses which are broadcast from the various stations throughout the long winter evenings. The winter wheat looks good. The Corn Products Show is being held in Lebanon the week of December 5 to 10th. Some farms have changed ownership recently. Harvey Seltzer sold the last of his farms for $100 per acre. Some public sales of stock and implements are being held and cattle is bringing good prices. Prices: wheat, $1.25; corn, 85c; oats, 50c; hay, $17; eggs, 60c; butter, 55c.—P. L. M., Dec. 5.

Montgomery County, Pa.—The weather has been very changeable, causing quite a bit of sickness. There is still some corn to husk and practically no corn stover hauled and very little manure hauled. Wheat and grass fields are looking good. Sinoke was plentiful this season. The squirrels did quite a lot of damage to corn owing to the scarcity of nuts. Dairy cows are scarce and high, while fat hogs are plentiful and hard to sell. Montgomery County Pomona Grange met at Trappe December 1st. Prices are as follows: wheat, $1.20; corn, 90c; oats, 50c; eggs, 55c; butter, 55c; chickens, 28c; veal calves, 15c.—C. N. D., Dec. 10.

Potter County, Pa.—The last link of the Roosevelt highway completed this month on this highway, near Coudersport, an altitude of 2124 feet is reached. This is the highest point reached by any improved road in the state. Roosevelt highway is conceded to be one of the most picturesque in the U. S. The Detroit Auto Club diverts traffic to New York over this route. It is 35 miles shorter than routes heretofore used. A train of twenty-six cars loaded with lime arrived at the county seat recently. About a hundred farmers made a gala occasion on the event. An oyster supper was served, speeches made and plenty of farmers taken. The company selling the lime gave away one carload.—M. C. S., Dec. 12.

Tioga County, Pa.—The weather for the past month has been a period of extreme changes and considerable rain. December 2 and 3 the thermometer hung around zero with strong winds. The greater part of the time the weather has been mild. Wet ground too wet for plowing and farm work practically at a standstill. Farmers doing some butchering, wood cutting, also repairing that can be done under shelter. The second area test for tuberculosis in county now. A few prices: eggs, 48c; fowl, $47@52; hay, $23@28, and very little demand; dressed hogs, 11c.—P. W. L., Dec. 9.

New class of Tree Experts now forming

We want outdoor men who like travel to join our new classes in tree work under highest authorities. All instruction is free, we pay travel expenses and in a few days you start earning money. The growing demand for our services enables us to enlarge our new classes. If you enjoy outdoor life, are single, between 18 and 30 years old, this is your chance to learn a splendid profession, not crowded and immediately profitable. Start now!

Nest Box Notes

IT HAS been brought out that English sparrows flying from one farm to another spread poultry diseases. It is surprising how many of these little pests exist on many farms. I went visiting this morning and saw a flock of at least seventy-five sparrows perched in a tree outside a poultry house, from which they were flying into the house to get a meal from the chicken feed. A .22 rifle and a supply of shorts or shot cartridges put in the hands of a boy old enough to have some judgment will soon thin out these sparrows, and it may even happen that Pop himself may want to take a shot now and then. Of course, one must distinguish between the English sparrows and such useful birds as song sparrows, chippies and other useful little birds, which spend their time eating weed seeds and insects, and never go into the hen house.

• • •

It is also a good idea to screen all windows with inch mesh poultry netting, which will exclude sparrows from the houses.

• • •

We have been having all sorts of weather lately—snow, rain, sunshine, fog and great variation in temperature. One morning here it was 63 and the next it was 12. These fluctuations are extremely trying to chickens, and the poultry keeper is put to it to keep his birds comfortable. It is especially important to keep the houses well ventilated but free from drafts, and as warm as possible. It is just as important to keep the litter dry, and this must be changed as often as conditions warrant. I never mind changing the litter, as we have an abundance of this material, and I always feel that the more that goes through the hen house the better the fertility of the farm will be. We have been spreading the poultry litter on the wheat, thinly, and it is no trouble to see the good effect it has had. Coarse material had better go on the corn ground as it may smother out wheat unless it is possible to shake out all the bunches.

• • •

Egg prices just took a drop of fourteen cents in a little over a week. From now on they will continue to go down until spring. When the hatcheries start buying heavily and speculators begin to put eggs in cold storage the price steadies, and then about June begins to rise slowly. From late summer until Thanksgiving prices are highest, and anyone who has a flock laying heavily at that time will coin money, unless he has a lot of idlers on his hands.

• • •

Pullets hatched in February, March and April, depending upon the breed, are the ones that will be laying during the season of highest prices. It is a good idea to have about a third of the flock of these early birds. Some or all of them may molt and go out of production for a time, but the later pullets will take up the battle then, and about February everything that has feathers and is of the proper denomination will begin to lay, and the poultry machine will be hitting on all four or all six as the case may be. Eggs may be pretty cheap then, but gross and net returns are both good at this time.

• • •

Anyone who has good stock will generally find a good demand for breeding stock. Last spring I had a small surplus of White Leghorn cockerels which I advertised for sale and which went like hotcakes. I could have sold a good many more than I had. With this in mind I saved a flock of good males this fall and had them certified for production and standard qualities and blood tested for bacterial white diarrhea through the New Jersey State Department of Agriculture, in order to have something really good to offer my customers this season.

• • •

The old hens at this time are getting feathered up nicely and will commence to lay soon after the first of the year. It is important that they be in good condition when they start to lay, and at this time should be getting plenty of grain in the ration, green feed, milk in some form, and a little time outdoors when the weather is fit. This applies especially to hens that are to go into the breeding flocks.

Was Heaviest Bird

Mr. V. Jadowski, of Allentown, N. J., had the heaviest bird in the recent Mercer County poultry show. This Jersey Black Giant weighed 14 pounds

Simple Home Remedy Was Successful

LAST winter I had a fine bunch of White Leghorns enclosed in a small house. I was feeding very strong trying to start them to laying when I discovered they had the roup and had it very badly. I got busy, tried everything anyone came along with and recommended, disinfected the house every day while chickens were in it. There were too many sick to try to move and I had no other warm house to move them to. I lost 40 out of 200 and do believe I would have lost nearly all but for this simple home cure. I took a corn can filled with coal oil, nailed it fast to a log in the chicken house, for I needed to use two hands. I caught every chicken that showed signs of roup and took her by the feet, held her wings down with same hand and dipped each head in the oil. I will admit it was severe and was some job. I kept this up every morning until I had them cured. Some only needed one dip but most of them several. One poor hen required so many that when she was cured she hadn't a feather left on her neck. I greased her with lard and she is the best hen in the flock. She was so bad I took her out twice for dead. I hope this may help others with this dread disease.—B. K., Lancaster County, Pa.

Increase Butterfat in Venango C. T. A.

THE Venango County C. T. A. finished its third year August 1, 1927, with 10 whole-year members. In addition two members were in the association only part of the year. There were 283 cows in the association during all or part of the year. Nine days were taken by Clarion County men whose records were summarized with the Clarion Association.

The association has made great progress during the time it has been in operation, notably in butterfat with an increase of 50 pounds. This increased production was obtained by greater use of records, better feeding and weeding out the lower producing individuals.

The River Ridge Jersey herd made a good record. Seven of the eight purebred Jerseys gave over 400 pounds of butterfat and three over 500 pounds of butterfat. Six of these cows are two-year-olds.

The Polk State School rapidly increased average production. The purebred Holstein herd at Polk is making a great average annual increase in production. Fifty-four of the 104 head produced over 400 pounds of butterfat during the year.

Sixty-six cows produced over 400 pounds of fat. The high cow is a fourteen-year-old purebred Holstein owned by the Polk State School, producing 19,710 pounds of milk and 750.6 pounds of butterfat. This cow is followed in butterfat production by River Ridge Farm's registered Jersey cow, Petunia, age two years, with 10,787 pounds of milk and 507.6 pounds of butterfat.

The results for the association for the three years are as follows:

Year	Ave. no. cows	Lbs. milk	Lbs. fat
1924-1925....	380.91	7698	309.2
1925-1926....	261.16	9004	329.7
1926-1927....	217.99	9259	359.9

The result for the whole-year members is as follows:

Total average number of cows in the association..	217.99
Average per cow:	
Pounds of milk	9259
Pounds of butterfat	359.9
Percentage of butterfat...	3.9
Value of product	$387.54
Cost of pasture	5.33
Cost of roughage	56.85
Cost of grain	99.66
Total cost of feed	161.84
Value of product above feed cost	225.70
Returns for $1 expended for feed	2.39
Feed cost per 100 lbs. milk.	1.75
Feed cost per lb. butterfat.	.45

Following is a grouping of all cows producing over 300 pounds of butterfat: Group 1, above 700 lbs. butterfat, 1; group 2, between 600 and 700 lbs., 2; group 3, between 500 and 600 lbs., 15; group 4, between 400 and 500 lbs., 48; group 5, between 300 and 400 lbs., 77. Total number of cows producing over 300 lbs. butterfat, 143.

E. G. Ifft, county agent; Tom C. Davis, cow tester in charge; figures compiled by I. O. Sidelmann.

Five herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Ave. no. cows	Breed	Pounds milk	Pounds fat
River Ridge Farm, Franklin, Pa...	7.83	R. J.	7709	458.6
Polk State School, Polk, Pa.	104.83	R. H.	12,071	418.1
R. G. McMurray, Utica, Pa.	13.67	R.& G.J.& G.	6737	335.8
Lee Buchanan, Carlton Pa.....	9.17	G. G.	6087	323.3
Rynd Farm, Oil City, Pa.....	30.83	Mixed	7193	302.8

DAIRY

WILL SELL MY ENTIRE HERD OF 10 REGISTERED AYRSHIRES
Herd fully accredited. Mostly 4 year olds.
JULE RITCHEY, R.R. 2, LANCASTER, PA.

Buck & Dee Run Valley Farms—Hereford cattle and Poland China Hogs. All ages for sale.
THE SAINT AMOUR COMPANY, Mertzville, Pa.

HOMESPUN TOBACCO—Chewing 10 lbs. $1.50 Smoking 10 lbs. $1. United Farmers, Paducah, Ky.

PLEASE say: "I saw your adv. in Pennsylvania Farmer."

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice given this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

CATS HAVE ECZEMA.—Can you give me a remedy to cure eczema on my cats which are of the Persian breed. I bought three some months ago and they have broken out. While it has not been advanced to soreness it crusts and I have tried everything I could learn about.—G. V. W., Hollidaysburg, Pa. There is always a problem in skin diseases inasmuch as many such cases are secondary to parasites. If all of the cats are affected, it would be well to have your nearest canine and feline specialist make scrapings and examine for parasites. Keep the diet to one of milk and meat entirely. Apply zinc-oxide ointment daily to areas affected. In case of parasites, however, the treatment must be under the direction of your veterinarian.

SWELLING NEAR UDDER.—I have a cow with a swelling just in front of her bag. It swells in the bag some and gets rather hard. It will get better for a few days and get worse again but doesn't affect her milking yet. Does not seem to be much inflammation. I have had cows that had inflamed quarters and gave bad milk but this is different. She has a good appetite.—C. E. E., New Millport, Pa. This may be an abscess, or it may be a collection of liquid in the tissue around the udder, as a result of some disturbance in the circulation. It may be necessary to have the swelling opened. This should be examined by a veterinarian and if necessary, opened to remove the trouble.

MAY HAVE PARASITES.—I have a valuable cat that seems to have some sort of mange or eczema on the head and at joints of legs. The animal keeps biting and scratching continually. The disease seems to be contagious as other cats on the premises are becoming affected. Please advise me as to diet and medicine.—J. O'G., Port Jervis, N. Y. This appears to be caused by a parasite. It would be well to take this cat to your nearest feline specialist for examination. Treatment will depend on the nature of the parasite causing the trouble.

"Is your husband trying anything to cure his deafness?"

"No; he has postponed it until the children have finished their piano lessons."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

Friendly Talks

By Edgar L. Vincent

THE coming of a letter this morning, asking me to buy a Christmas tree calls my mind to the coming of this greatest of national holidays. Somehow my mind ran back to the old farm home, where on the night before Christmas, we boys and girls used to hang our stockings on a string stretched up behind the stove. It took a pretty stout cord, for there were six of us, and we always expected lots of things; and copper-toed boots and shoes, with the other gifts sometimes weighed so much that old Santa Claus thought it best to set them on the floor under the line and leave us to pick out the sizes that best fitted us in the morning.

My! what a mysterious sound the soft paper in those stockings had Christmas morning, when we hustled out of bed in the dim twilight, grabbed our stockings and hurried back to bed to feel around in the dark to see just what the old fellow with the long whiskers and the red and white clothes had left us!

They Were Happy Days

And everything was all right those days, whether we fished anything more out of our stockings than a stick of candy striped red and white, an apple that looked just like some that grew down in father's orchard and a fried cake just as delicious as if it had come from mother's own kitchen. It had exactly the same twist and there wasn't a sign of a hole to eat around as there is in the doughnuts we buy at the store these days.

So happy! So thankful! So glad there was a Christmas day; and if Santa Claus brought us a pair of striped mittens, our cup of joy was full to overflowing. Far-off, simple, happy days! We miss them.

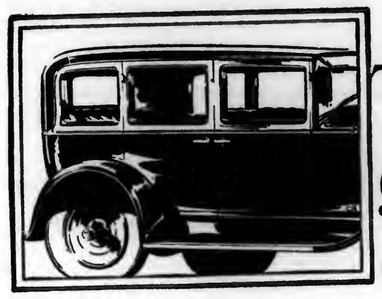
Well, why did we get so much joy out of our Christmas of the long ago? Have we not a hundred times more costly gifts to be thankful for than we had then? Would we be satisfied with the poor little trinkets that came from the stockings on the line in the long ago if these were the only things that came to us Christmas morning? Is it a fact that we have outgrown the Christmas of yesterday? Has its shine faded out in the glitter of the present-day extravagance?

Love Goes With Gifts

Just one thing made the Christmas mornings of our boyhood and girlhood bright, and that is the only thing that can make these yuletide days all they should be to us, and that is the love that was in our hearts and in the hearts of those who made the Christmas time for us the happiest of all the year. Sometimes if we had only known it, there were tears in the eyes of Mother as she tucked the little gifts she had made for us into our stockings on the night before Christmas, tears of regret that she could not do more for those she loved so well. We did not understand all it meant to our parents then that love must bring such simple things on the day when love should do its utmost.

But love was what gave the trinkets such worth. Love is what dignifies and beautifies and magnifies the things we do now. Nothing else can do it. We may give till we are too poor to pay for a postage stamp the morning after Christmas and if love does not go with our giving it is as empty as a nest from which the bird has gone.

So we need to ask ourselves now, when we are thinking of our Christmas giving, "Does love go with my gifts?" If we can say "Yes" to that we have exalted our giving to the plane on which He stands Who gave us our first Christmas Day; and that is enough!



The Smooth *Glossy* Surface of every

Body by FISHER

Note the smooth, glossy, *solid* surface of every Fisher-built body. The chief reason for this is the remarkably fine steel-faced dies which Fisher uses for the production of steel panels.—Manufacturers and engineers from all parts of the world have visited Fisher plants to see these steel dies made—for Fisher is world-famous for its steel press work.—It is because Fisher dies are so precisely made and because they are faced with steel, that they draw the sheet metal out smoothly, evenly. This surface forms the basis for the finer finish which is so apparent on all Fisher bodies.

Steel Paneling—The sheet steel used in the panels which form the exterior of every Body by Fisher, is heavy, tough stock. The sheet steel is cut and pressed into shape by hydraulic or mechanical presses. Some of the presses used in this work exert a pressure of 800 tons, yet they are controllable to the microscopic fraction of an inch.

Wood and Steel Construction—Fisher bodies are constructed of wood and steel. The wood reinforces the steel and the steel reinforces the wood. The *composite* body is the strongest constructed body made. The wood absorbs shocks and sound. It affords resiliency. Fisher bodies through the strength derived from wood and steel combined, insure greater safety.

Growers Discuss New Jersey Horticultural Problems

THE meeting of the New Jersey Horticultural Society, in Atlantic City, last week, was marked by a number of outstanding developments for the year just drawing to a close.

In the light of experiments conducted last season with ethylene gas on ripening tomatoes and the blanching of celery, this practice was not recommended for New Jersey conditions. Dr. W. R. Robbins, of the New Jersey Experiment Station, told of experiences at Del-Bay Farms this past summer under which celery sold green returned more money than cars treated with the gas under the most approved and ideal conditions. The results on tomatoes were quite disappointing, according to Dr. Robbins, and other methods of ripening were equally as good.

On the subject of "New Insecticides for Old Insects," Dr. T. J. Headlee, the state entomologist, reported a new insecticide that was 100 per cent effective on the squash bug. In Gloucester County the squash bug was controlled by using the new spray developed for the Japanese beetle.

Southern Plants Increased Tonnage

W. I. Tomlinson, Camden County, was able to increase his tomato tonnage from eight to thirteen tons by the use of southern plants set in the fields early in the season. The extra five tons to the acre was secured at practically no additional cost per acre except for the extra picking. Mr. Tomlinson secured plants from the South that had been grown and handled under ideal conditions and were set in the fields long before the locally-grown plants were ready.

Following the story of W. I. Tomlinson on his big tomato crop, H. F. Hall, of a Camden canning company, told of the plans of his company in growing plants in Georgia for the New Jersey grower. This company has already contracted for some 500 acres of tomato plants for 1928 delivery. These plants are grown on new land in the section of Georgia that lies close to the Gulf of Mexico. The seed is sown in February on ground that has been plowed the year previous. The seed and fertilizer are put in the ground with a grain drill and they have the plants about four inches apart in the row and the rows six inches apart. The fields are never hoed or weeded as weed seeds are unknown in this new ground.

A new variety of asparagus that promises to surpass the Washington strains that have become so popular in recent years was discussed by Alvin Crispin, Swedesboro. This new variety now grown on a limited scale in Gloucester County, is the result of some work carried out by the late Harry Carter, of Swedesboro, who worked with Dr. Norton, the originator of the Washington varieties.

Fruit Grading Law Needed

The subject of a fruit grading law for New Jersey was discussed. A. E. Mercker, chief of the Bureau of Markets, went over the fruit marketing situation and pointed out some of the things that were ruining the market for Jersey fruit. Green fruit, a slack pack, a topped package and ungraded specimens in the same package, were some of the things that a grading law would overcome. New Jersey cannot hope to compete in the big markets much longer without some such form of protection.

The entrance of another big chain store into the fruit and vegetable distributing business the past season led to the invitation of representatives of this company to address the convention. The point was stressed that this house wants standardized goods packed in carloads and packed equal to U. S. grades.

The new idea advanced by Robert Hunter, the company representative, was that fruits and vegetables should be sold by weight instead of measure. In this manner the consumer gets what he pays for. Under the present system most of the farm products in New Jersey are sold under measure with but little regard for the actual weight.

Abandoned Orchards Menace Fruit

Another hazard to the fruit industry was pictured by L. R. Smith, county agricultural agent, Mt. Holly, in the way of abandoned fruit orchards. In Burlington County there are nearly 1400 acres of fruit orchards that are apparently abandoned due to the slump in the real estate boom of two years ago. Farms were bought by the score in anticipation of higher prices and they are abandoned today with the orchards neglected and pests flourishing and swarming into nearby orchards. These abandoned orchards are ideal places for the breeding of Japanese beetles, codling moths, curculio and many other serious pests. According to Mr. Smith there is a law to meet this situation and from the discussion that followed some action is likely to result this winter to cope with the situation.

The Marglobe tomato was on the witness stand for the greater part of one afternoon and came out victorious after being questioned by canners, growers and market officials. The only point raised was over some of the poor relations or inferior strains that were sold last year. De-

THE GOOF—
WHO DOES ANYTHING LIKE THIS IS RECOGNIZED INSTANTLY AS A CANDIDATE FOR THE CUCKOO CLUB—
WHILE THIS POOR SAP MAY BE CLASSIFIED AS "PROMINENT CITIZEN"
BOOT-LEG

spite this one short-coming, it was ably defended and endorsed as a tomato for table, canning, shipping and for the retail market.

In the fruit residue discussion it was brought out that a satisfactory means of cleaning the fruit has been in use this season under which a thousand cars of apples had been washed and passed inspection without a single complaint.

The meeting was brought to a close with the election of John Hankinson, Pennington, president; Edward Mechling, Moorestown, vice president, Roscoe Dellaum, Pine Brook, and Prof. L. A. Schermerhorn, New Brunswick, were elected as members of the executive committee. —Amos Kirby.

Barrels Were Scarce

It was at the closing exercise at a city public school and Marjorie was reading a composition of her own on "Grant's Work in the Civil War."

She was getting along fine until she started to describe Lee's surrender.

"Lee," she said, "was handsomely attired in full uniform while Grant wore nothing but an old ragged Union suit."

Patrons of Husbandry Meet in Erie

Pennsylvania Grangers Discuss Problems Which Affect the State's Farm Interests

By R. P. KESTER

THE fifty-fifth annual session of the Pennsylvania State Grange was held in Erie, Pa., December 13-15, 1927. Although Erie is in the extreme northwestern corner of the state, making it rather difficult of access for a large proportion of the state's Patrons, the arrangements and accommodations for the meeting were all that could be desired, excelling those in many other cities. Delegates were unanimously pleased with the treatment received, officially and otherwise.

The attendance was not as large as at some former meetings, the number of official delegates being about 780. The sixth degree was conferred upon 284 candidates. A large number of visiting Patrons and many local members from nearby Granges helped to swell the total attendance.

Build Up the Grange Unit

J. Audley Boak, Lawrence County, acting Master since January when P. H. Dewey resigned the post to become manager of the state workmen's insurance fund, opened the meeting on Tuesday afternoon. The first item of routine business was the reading of his annual address. In it he reviewed the state of the order and suggested many lines of endeavor for strengthening and building up the Grange. He laid emphasis upon the often overlooked fact that the subordinate Grange is the unit in the Grange structure, and it is here that every member should lend his best efforts in building. Only by increasing subordinate Granges in numbers and strength can the State Grange be protected from still further losses.

On matters of general importance, Mr. Boak strongly favored strict law enforcement and the maintenance of the 18th Amendment, the rapid extension of rural electric lines, the reduction of unnecessary public expenses so that taxes may be lowered, and the adoption of all possible means to prevent wars and international ill-feeling.

On Tuesday evening the Grange was officially welcomed by the city of Erie. This was a public meeting and the large auditorium was well filled. Secretary John H. Light responded to the welcome. He briefly reviewed some of the accomplishments of the Grange,—the building of good roads, the adoption of the rural mail system, the orderly settlement of farm lands, etc.

Secretary of Agriculture Charles G. Jordan made the principal address of the evening. In his usual stirring manner he emphasized the greatness and the importance of agriculture in Pennsylvania and urged farmers to advertise and popularize their business until it shall receive the same attention and consideration as other business. He gave a brief outline of what the State Department of Agriculture is doing and pledged himself and his fellow workers to the task of assisting in every way possible the advancement of the farmers' welfare. He made special mention of the successful work accomplished in corn borer control and in the eradication of bovine tuberculosis.

One project of the State Grange, the building of a girls' dormitory at State College, was pushed at several sessions by various officers. The chief effort was led by the Home Economics Committee, of which Dr. Hannah McK. Lyons is chairman. This committee has done much valuable work during the year. On Thursday evening a pledge contest added several thousand dollars to the fund. The amount of cash and pledges on hand now totals about $82,000, leaving $18,000 yet to be raised.

Appeals for Greater Activity

The reports of the secretary and treasurer showed that the membership of the Grange, as well as the treasury surplus, is gradually becoming smaller. Strong appeals for greater loyalty and activity in order to set the tide the other way were made. All agreed that changed social and economic conditions have created new interests for the farmer and his family, and that it is necessary to make the Grange and its work more definite in character if it is to hold its place. It was declared that the need for the Grange is just as great today (to page 13)

Camouflage Stone

A NEW way to make a building "look good" and at the same time keep down the construction cost has been discovered by Henry Bentcher, a Pennsylvania architect. When he built a hunting lodge on his estate a few months ago he used cinder blocks but the average passerby thinks he has a stone building. The effect was obtained by pointing the blocks, as shown in the photograph, after they had been laid in the usual manner with cement mortar. As Mr. Bentcher aptly pointed out, if he gets tired of his "stone" house in a few years he can very easily and inexpensively put on a coat of stucco.—Thos. H. Wittkorn.

Why I Voted Against Vare and Smith

Senator Copper

SEATS in the Senate of the United States cannot be knocked down to the highest bidder if the honor and the perpetuity of free government are to be maintained. If we permit men to buy their way into public office, or to be otherwise corruptly elected to office, we cannot have a free ballot, an honest count, nor clean government with the respect, the confidence and the support of the people.

Coming down to lesser political considerations, good politics demands that the Senate by its action should condemn and repudiate the methods used by Vare and Smith. If it does not the resentment of the country is much more to be dreaded than any effect that it would have on party majorities in the Senate.

This was a battle of millionaires to win a seat in the Senate. A special committee of the Senate, with Senator Reed as chairman, spent months investigating the charges against Vare and Smith. Each was given every opportunity to present his defense. The Senate committee reported the facts as set forth in the Norris resolutions of exclusion submitted the first day of this session.

In the case of Vare these were that "there were numerous and various instances of fraud and corruption" in behalf of his candidacy, and that Vare and his friends spent $785,000 in the primary election.

Did Not Deny Accusations

Although given full opportunity, Vare in no manner controverted the truth of the foregoing facts.

In the case of Smith the committee reported that evidence substantially undisputed showed $458,782 was expended in behalf of his candidacy, of which all but $171,500 was received by Smith's personal agent with Smith's full knowledge and consent. Of this total, $203,000 came from officers of large public-service corporations at a time when Smith was chairman of the Illinois Commerce Commission empowered to regulate the charges and business of these corporations.

The Senate was fully informed in both cases as the sworn testimony and official report of the committee had been on file for months, therefore was able to pass judgment the day that Vare and Smith asked to be seated.

The attempt to have them sworn in for further investigation meant every effort would be made to delay consideration of their qualifications. It meant also that the supporters of Vare and Smith would resort to parliamentary tactics and other technicalities to keep them in the Senate indefinitely.

If they had immediately been sworn in a two-thirds vote probably would be necessary to oust them. We haven't such a margin. So those who opposed the seating of these men believed it best to take no chances and did not. They had been given every opportunity to make a defense and had failed. I voted against administering the oath in both cases.

When Newberry of Michigan spent $195,000 on his primary election, both the (to page 13)

"He that swells in prosperity will shrink in adversity."

Comments on the Week's News

BY MUTUAL agreement between scientists, manufacturers and the trade, the term "acid phosphate" has been thrown into the discard. Hereafter, that material will be called "superphosphate." Until the public becomes accustomed to the change of words Pennsylvania Farmer will print it thus: Superphosphate (acid phosphate). The term acid phosphate was considered a misnomer, and caused many people to think that the material worked an injury to the soil by introducing acid into it. Even though the conclusion was erroneous, the words suggested the idea. When properly made, "acid phosphate" is neutral, and not acid in fact.

✦ ✦ ✦

The figures for 1926 show that the number of motor cars in the United States exceeded the number of telephones, the former numbering 19,237,171, and the latter 17,746,168. The total tax collected from motor cars was $712,000,000, of which $96,386,767 was federal excise tax. According to the revised federal tax bill recently adopted by the House of Representatives Committee, the federal tax on motor cars would be reduced from three per cent to one and one-half per cent of the factory price.

✦ ✦ ✦

Admiral Magruder, who wrote a piece about mismanagement in naval affairs, and who was put out and reprimanded, is now being quizzed by a congressional committee. A good many people opposed to bureaucratic gagging are hoping that he will thus be given a chance to tell what he thinks and knows. The newly authorized inquiry into the cause of the late submarine disaster increases the pressure for an investigation as to whether or not the navy is managed efficiently.

✦ ✦ ✦

It is only three weeks to the time of the State Farm Products Show at Harrisburg. This affair has become by all odds the biggest and best agricultural show in the state and is worthy of the attendance and serious attention of every farmer. The prospects are that the exhibition next month will be bigger and better than any so far held. In addition to the educational value of the exhibits, the meetings held in connection with it are well worth any reasonable sacrifice to attend. How big will this have to get before legislators realize that state provision for an adequate place to hold agricultural affairs is worth while?

✦ ✦ ✦

Isn't is about time each one should try to stop the modern commercialization of the Christmas spirit? When one stops to consider the original meaning of the day and the reason for its celebration, one has difficulty in reconciling the present practices with them. In many instances and for many people the season has become a burdensome time, so that feelings of joy and gladness are impossible because of the financial burdens imposed.

Baumes Law Popular

A FEW weeks ago we published a remark here intimating that the Baumes Law in New York was pretty severe when it sent a fourth offender to prison for life for stealing chickens. Because of that remark we have had several letters criticising our attitude severely and condemning petty thieving on farms and chicken stealing in particular. One writer is strongly against capital punishment for murder and treason, believing it is not right to take human life, but says that all chicken thieves should be lined up and shot. It is another case of depending upon whose ox is gored.

We hold no brief for crime of any kind, and we believe in trying to arrive at effective methods of preventing it. Purse-snatching, chicken-stealing, orchard-raiding, etc., are low forms of thievery. People living in localities where thieves abound have a great deal of annoyance and the practices should be stopped. But our point is that certainty of punishment is a greater deterrent than severity. In a country where a criminal has nine chances to escape to one chance of being caught and punished, crime is bound to flourish. What we need is to have our courts purged of every factor which makes it easy for smart but unprincipled lawyers to thwart justice. Sending one chicken thief out of ten to prison for life will not stop chicken stealing.

Ring in the New

THE journey through life may be likened to traveling over a new road into an unfamiliar land. We are always expectant and hopeful. We are anxious to see what lies just around the next corner, or beyond the next ridge. The road we have been traveling may have been rough and miry. We have had to detour for miles, making little progress, but we feel sure we shall come soon upon a good hard highway. Hope spurs us on. We keep to the road and step on the gas. Finally, we reach a solid road, and oh! what a grand and glorious feeling it is.

Farmers have been traveling over a bad road for the last five years. Some have become discouraged and stopped by the wayside, or struck across country, seeking another way. Others have impeded progress by stopping to complain, but without doing anything which would better the road, or speeding the progress towards the solid road. But most farmers have kept plugging on. They knew there was something better ahead and would not sacrifice their business, nor weaken their ability, by quitting or marking time. Careful measurements show that agriculture has been climbing slowly upwards the past few months. The turn has been made and there is some distance yet to go. But every sign indicates that at the next turn the road ahead will be seen to be much better.

With the appearance of the New Year, let us ring out of our lives those thoughts and tempers which hinder progress to better things. Let us ring in new hope, new ambition, new courage. Up the next grade and around the next turn, the land will be fairer and the going easier.

After the Farm Loan Banks

EVER since the Farm Loan system was established the big money lenders and farm mortgage banks have been knocking it. They have made all manner of dire prophesies concerning it, and also tried to discredit the soundness of the system to the bond-buying public. Of course, no overt acts against it were committed, but the organs which represented them have persistently misrepresented the need, the service, and the soundness of the institution.

A new and formidable onslaught is now being made, due, evidently, to the statements concerning the management of the Land Banks made by Secretary of the Treasury Mellon about the need for "housecleaning." Three members of the Farm Loan Board were ousted and three others named for their places, one of them being Mr. Meyer, formerly of the War Finance Corporation and an international banker. A resolution has been introduced into the Senate asking for an investigation of the War Finance Board's activities during and following the war, and a strong protest against Mr. Meyer's confirmation will be made.

Money is plentiful in this country now. People of money are seeking safe investments. Agricultural land has begun slowly to advance, and this has always been a favorite field for careful investors. The federal Farm Loan Banks have relieved thousands of farmers from the specter of the short term mortgage holder. Is it possible that the money-lending interests of the country will be able to overthrow the loaning system which alone is fitted to the needs of farmers?

Much is being made of the fact that three banks of the system have failed recently. Little is said about the thousands of old-line banks which have failed during the past three years. No doubt corrections and improvements are needed, but such is the case with every system. There is no excuse for assuming that only the old-line banking system is fitted to manage the loaning of money to farmers.

Editorial Sidelights

THE train that left Erie for points east and south sometime after 7:00 A. M. on Friday morning, December 16, was really a Grange special. The annual meeting of the Pennsylvania State Grange had ended late the night before. Scores of delegates and officers flocked through a driving cold rain to the first train toward home.

Many were still on that train some fourteen hours later when, after having been added to and subtracted from at Emporium Junction and Harrisburg, it finally reached Philadelphia.

How did restless Grangers spend fourteen hours on a train? They talked, they cracked jokes on one another, they took cat naps, some took naps longer than cat naps, some played "500" and bridge. A few tried to start some singing, but the rest didn't feel musically inclined.

Two young girls, bundled up in their fur coats, smoked cigarettes in the vestibule between cars. The self-appointed committee delegated to investigate the matter determined that the two girls were not Grangers.

CONSIDER FARM BILLS

Several Farm Relief Bills Proposed—Highways Receive Consideration—Tax Reduction to Be Discussed.

Washington, D. C.

WHEN Congress adjourned on December 21 for the Christmas holidays, it had made little progress in passing legislation, but was well organized with the various committees ready to take up active consideration of bills when the session convenes January 4th.

Hearings on farm relief have been set by the committee on agriculture to begin January 16th. Consideration will be given all the bills relating to farm relief, but special stress will be placed on the new Haugen bill already introduced by Congressman Haugen, of Iowa, chairman of the House Committee on Agriculture.

Senator Borah Proposes Bill

A government-controlled corporation with a capital stock of $1,000,000,000 is proposed in a bill by senator Borah, of Idaho, to deal out economic assistance to the farmer in the production and marketing of his basic crops.

Combines Grange-Farm Bureau Plans

A Federal Farm Board bill introduced by Senator Caraway, of Arkansas, is regarded as a clever attempt to combine the farm relief plans of the National Grange and the American Farm Bureau Federation. The Caraway bill copies almost word for word the McNary bill, but with the National Grange export debenture plan substituted for the equalization fee scheme.

Wants Post Roads Constructed

Senator Tyson, of Tennessee, has introduced in the Senate a bill which would authorize the expenditure of $100,000,000 for construction of rural post roads over which rural carriers travel in serving the rural routes, exclusive of those now included in the federal-aid highway system.

Suggest Super Highway System

An extensive system of super highways is contemplated in a bill introduced by Senator Moses, of New Hampshire, providing for surveys of routes which would be as direct as practicable between the Atlantic and Pacific Coasts, and cross highways from the Canadian line to the Gulf of Mexico.

Woolen Goods Should Be Labeled

Truth in fabrics bills have been introduced by Representative French of Idaho and Senator Capper of Kansas. Substitutes for virgin wool in woven and knitted fabrics purporting to contain wool would have to be plainly marked if this bill should become a law.

License Commission Merchants

A bill providing for the licensing of commission merchants, dealers and brokers in agricultural products has been introduced by Senator Borah, of Idaho.

Tax Reduction Faces Senate

The tax reduction bill as it passed the House by a vote of 366 to 24 and was sent to the Senate makes a total cut of $289,735,000 in Treasury receipts over the present estimates. Corporation taxes are reduced from 13½ to 11¼ per cent. The sales tax on automobiles is repealed. The stamp tax on sale of produce on exchange is also repealed, and a 50 per cent reduction is made in the tax on sales or transfer of capital stock. The inheritance tax is retained.

President Would Pay Debt

The president insists on paying off the public debt, and thereby reduce interest charges, but the prospects for future debt reduction are fading with the insistence of Congress on excessive tax reduction on one hand and its propensity to enlarge appropriations on the other.

Propose Reclaiming South

The Southern Reclamation Conference is asking Congress to appropriate $14,000,000 as a starter for a vast reclamation scheme in the southern states. It is proposed to drain swamp lands and develop on them communities of ready-made farms on an extensive scale.

Regulate Motor Vehicles

A bill to regulate interstate commerce by motor vehicles operating as common carriers on the public highways will soon be introduced in Congress. It is said to have the backing of the railroad interests. It is opposed by the truckers and bus lines, as well as by the farm organizations, on the grounds that it would enable the Interstate Commerce Commission to crush out the independent operators and give the railroads a monopoly of the motor and bus interstate business.—E. E. R.

START SPECIAL STUDY

To Enlarge Activities of Bureau of Markets—Press Suits With Opposers to T. B. Testing.

Harrisburg, Pa.

MEMBERS of Governor Fisher's new commission on the penal institutions of Pennsylvania will make the first study of the proposition to establish county work houses and the relation of farms to prisons of various kinds.

Make Market Plans

Preliminary steps are about to be taken at the Capitol to enlarge activities of the State Bureau of Markets. Secretary of Agriculture Jordan has been making numerous visits about the state during which he has examined into the marketing conditions and asked many questions as to how the bureau can help. Local commercial bodies have been getting into close touch with the state over the local product situation.

Plan Quarantine Work

Arrangements for the federal-state quarantine for the corn borer next year are being made upon a rather elaborate scale owing partly to the enlargement of the area to be supervised and to the necessity of drastic steps in some counties.

State Brings Suits

The Department of Agriculture's livestock officers have decided to bring suits against people in York County resisting the cattle tuberculosis work and will push them to obtain decisions which can be pointed to. As a result of last summer's fracas State Police brought suits. Now the department will get into the game. A comparatively small number of persons is involved.

Commissions at Work

Studies are being made by commissions authorized to investigate the whole question of salaries to public officials, county and local as well as state, and to devise new election laws. While this is in progress the new state administration is pushing along its audits of various departments which will be a basis of some overhauling of methods and possibly of men. It should not be forgotten that the administration through the Executive Board, can reorganize bureaus and divisions and make over the system in any department.

More Speakers Than Ever

Forecasts of programs to be presented during the meetings of "Farmers' Week" in Harrisburg indicate there will be more speakers than known at previous gatherings of the kind. Almost ten states as well as the national government will be represented. These men are all specially qualified to discuss some feature of the work of the thirty organizations planning to hold meetings here. Experience of the state in its contests with bugs, beetles and borers and in combating animal and plant diseases will be made an important part of the programs.

REPORT A PROFIT

Committee Appointments Made—Gloucester County Board of Agriculture to Meet—Offer Thief Rewards.

Trenton, N. J.

THE Burlington County Supply and Produce Company, of Mt. Holly, a farmer-owned cooperative, reports a net profit on the year's business of $10,638.97, one of the best seasons in its history. The net earnings justify a five per cent dividend according to information given out at the annual director's meeting on December 12th.

Receive Appointments

A. E. Mercker, chief of the Bureau of Markets of the State Department of Agriculture, was appointed chairman of the City Markets Committee of the National Association of Marketing Officials at its recent meeting in Chicago. Secretary of Agriculture William B. Duryee was made a member of the committee on resolutions and a member of the executive committee of that body.

Elected President

G. O. Daminger, Hammonton, has been elected president of the Hammonton Egg Producers' Cooperative, a recently-formed egg marketing organization. Under the agreement with the New York dealers the producers of high quality eggs are to receive a two-cent premium above the top market quotations for that day. The Hammonton producers are joining with the producers of Dorothy in the arrangement for marketing and transporting eggs to New York.

Stage Roast Duck Dinner

The Gloucester County Board of Agriculture is staging a roast duck dinner as a part of its annual meeting program to be held at the Woodbury Country Club, on January 5th. The morning session will be devoted to a business session while in the afternoon an entertainment will be staged.

Offer Rewards

The Essex County Board of Agriculture has offered rewards for the capture of numerous chicken thieves that have been preying on farmers' flocks in that county since the first of the month. Twenty-four known cases of wholesale robberies during three weeks led the board to take definite action to curb the practice.

Short Course Students Organize

A Hunterdon County unit of the E. B. Voorhees Agricultural Society was formed at Clinton on December 14 with thirty members enrolled. The E. B. Voorhees Society is the graduate division of the short course agricultural students at the College. The name was taken from the former director of the Experiment Station, the late Edward B. Voorhees. The society has about 3000 members, most of whom reside in the state.

Journalist to Address Meeting

Bristow Adams, noted journalist from Cornell University, has accepted an invitation to address the Hunterdon County Board of Agriculture on January 5, at its annual meeting. —A. K.

PLANTS MERGE

Demonstrate New Egg Law—Record Milk Price Established for November—Corn Products Rival Honey.

Ithaca, N. Y.

A MERGER of all the grape juice plants in New York, Ohio and Michigan may be consummated soon to promote greater efficiency in sales.

The New Egg Law

Eighteen retailers of eggs of the city of Ithaca recently witnessed a demonstration of egg candling and learned the principles of the new egg grading law in this state. They objected to the law as it will add about two cents to the cost of each dozen eggs and requires expert candling.

Dangerous Rival of Honey

At the recent annual meeting of New York State Federation of Beekeepers' Associations it was decided that a new organization of beekeepers must be arranged or the present one must be reorganized. A program of advertising by a state committe was recommended and corn syrup was designated as a dangerous rival of honey in the housewives' use and by manufacturers of food products.

Record Set in Milk Price

The Dairymen's League Cooperative Association, Inc., established a record price for milk in November. Its members received $3.08 a hundred for milk testing 3.5 inside the 201-210-mile zone with a six-cent deduction for operating expenses. This is an advance of 30 cents a hundred over last year and of 56 cents over 1924.—M. G. F.

IT'S A LONG, long way from here to Erie,—444 miles—but I made the journey to attend the annual meeting of the Pennsylvania State Grange. Thirteen and one-half hours at a stretch in a day coach is just about enough to satisfy one's longing for a train ride. But I enjoy such a trip once in a while. I like to see the country again, not having been over this route for fifteen years. I like to read, ponder, and study people, not caring particularly whether or not I have conversational company.

◆ ◆ ◆

ONE of the magazines I bought to read on the way was the American Mercury. I buy one of these once in a great while just to see how long a given set of writers can keep up their critical, cynical line of destructive philosophy. While it is one of the most scholarly and best edited magazines published, it is also the source of a good bit of the argument we hear on all sides against the existing social order,—especially on love and marriage, and free agency. I read this one thru and then gave it to a friend on the train who I am sure is able to read it without being harmed.

◆ ◆ ◆

BUT the later one-third of the journey was made after nightfall and on a local train. Then I had time and inclination to visit with many other pilgrims to the Grange meeting. The subjects discussed ranged from the best variety of cabbage to modern propaganda. An argument used a hundred years ago against universal education was that it would develop a people who would think alike on all questions. It is only necessary to talk to a number of people from widely scattered sections to know that, so far, we are far from being unanimous on any important question.

◆ ◆ ◆

ARRIVING at Erie about ten o'clock, P. M., I found that many had already arrived. The number steadily increased till noon the next day. There is something about a meeting of this kind that grows on one with the passing years. Old friends are greeted and new ones made. The social instinct in rural people is naturally strong, and when they go for an outing of this kind they expect to have a good time and they do. But time, here as everywhere, makes changes. The absence of familiar forms noted from year to year tends to sadden one on reflection.

◆ ◆ ◆

YOU can leave Erie by the Pennsylvania Railroad only twice a day,—before daylight in the morning and after dark in the evening. We chose the former and arose at 5:30 A. M. for a seven o'clock train. It was pouring down rain, evidently bent on keeping up the record for the week, having rained all but one of the days we were there. The railroad company had provided only enough coaches for the regular travel, and as there were about 150 extras on account of the visitors the train pulled into the yards and waited one hour while they rounded up and attached two more coaches.

◆ ◆ ◆

THE rains of the week had swelled the streams to a full flood. As we wormed our way down the West Branch of the Susquehanna, the tales of river days told me by my father came back to me. I could, in imagination, see the old-time rafting crews swinging their long oars (one at each end of the raft) as they labored to prevent their craft from "stoving" by hitting the banks as they were whirled down the crooked and swift stream. But those days are over. The ride down the river from Driftwood to Lock Haven is beautiful, when the stream is full. The river and the high bluffs on either side make it a miniature Hudson River journey. We had a fine time coming home. The chair car was kept alive with fun and conversation, one of the chief entertainers being ex-Secretary Willits.

Smith—Your face is a sight, Gray. Did you cut yourself while shaving?

"Not exactly. Perhaps I'd better say I shaved myself while cutting.

The Cheerful Plowman

Having Pictures Taken: Mine

WE'RE having photos taken, each one of us at last; the last ones are old fashioned and represent the past. This picture shows yours truly as he looks today, dressed in his Sunday clothing, a very fine array! Comparing it with others of vintages gone by I see no cause for moaning or sounding forth a cry! There are a few more wrinkles, or deeper ones, at least, my forehead, I am certain, is more superbly creased. Some crow's feet are encamping behind my flashing eyes, my nose has grown a trifle in dignity and size. My hair retains its texture, my whiskers are the same, my eyebrows still are thrifty and firmly in the game!

The picture shows the passing of ever speeding days which bring to common mortals their roses and their greys, but when I look this over I'm grateful as can be no crabby, sour expression has found a hold on me! I think I am not boasting when I speak up and say that grin across my features is young and fresh today! The months that come may wrinkle the skin a little bit, but that old grin, thank heavens, has faded not a whit!

That means, I think, no summer, no winter, fall or spring,—all seasons put together that travel on the wing,—though it may touch my body and mark it here and there, can keep my inner spirit from being light as air, my spirit still is happy and kindly, too, I see, so little added wrinkles are not a grief to me!—J. Edw. Tufft.

Rule That Insects Lie Down and Die

WITH Danish type of cabbage selling at the lowest figures in several years, northern growers who still have large amounts of good keeping stock may take some slight hope from the fact that although Louisiana plantings are largely increased over last year some other southern states have reduced acreages. All together the increase over last year is slight. Growing conditions throughout the South may determine in large degree the price we shall secure for stored cabbage during the coming months.

$ $ $

The November-December 1927 Bimonthly Bulletin issued by the Ohio Agricultural Experiment Station, at Wooster, gives full directions for fumigating greenhouses with calcium cyanide. As a producer of hydrocyanic acid gas this material is less expensive than the potassium and sodium cyanides formerly used. It is also easier to use, no sulphuric acid being required. Those interested will do well to secure this bulletin.

$ $ $

The recent appearance of two fertilizer agents is a sign that spring eventually will come. The selling argument of the one was so much of a back number that I was astonished to meet with it in these supposedly enlightened times. Moreover, he stated that the argument worked, that it sometimes enabled him to take business from competitors. He maintained that his fertilizer "had the smell" and that "where the smell is plant food is also." I am convinced that he himself firmly believed all this. As further argument he cited the aroma emanating from the hen house, pig pen or barnyard too long uncleaned and asked me if I did not believe manures effective in increasing yields. When I argued that guaranteed analysis is the only basis on which to buy fertilizer and that an extremely high grade practically odorless fertilizer can be mixed from nitrate of soda, superphosphate (formerly called acid phosphate) and muriates of potash he came back with the statement that he did not go so much by chemistry as by results. I assured him I was getting results from home mixing the materials mentioned but he continued to feel I was missing a lot by not having "the smell" in my mixture.

Two sacks (334 lbs.) nitrate of soda, 4 sacks (668 lbs.) 20 per cent superphosphate, and 1 sack (200 lbs.) muriate of potash will drill all right if all materials are in first class condition and they are mixed only a day or two before using. The resulting mixture is a good one for leafy vegetables where little manure is applied and gives more plant food for the money than I have been able to secure in ready mixed goods. Besides I know that each element comes from good, available sources.

$ $ $

The old saying about "one being born every minute" must still hold true. I understand someone has been selling for the modest sum of $5 to $8 per gallon, doubtless depending upon "ability to pay," a liquid which it is claimed will eliminate insects and disease besides making the practice of spraying unnecessary. One simply dilutes this magic gallon with 50 gallons of water and sprays it over an acre of land sometime in the winter. According to the rules all bugs and worms lay themselves down and die, diseases vanish and the sprayer may be safely put up at some neighbor's sale next March. This looks like a good opportunity to hold onto your money while some other fellow does the experimenting. One potato grower bought $70 worth or at least that is what he paid. I'll admit that the stuff has not been "fairly tented" as the agent says but anyone who ever handled soils or sprayers ought to know just about how light a dew 50 gallons per acre makes and how shallow this application will penetrate. How about the pests that will fly into the field next summer, the disease lurking on plant refuse down in the soil or to be brought in on seed? Truly hope springs eternal in the human breast.

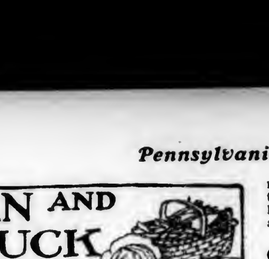
The annual meeting of the Pennsylvania Vegetable Growers' Association will be held in Harrisburg the week of the Farm Products Show. The first session opens at 2:00 P. M. Tuesday, January 17, with discussions on "Commercial Fertilizer," a subject which we all know so little about yet one which vitally affects profits. Other topics scheduled for Tuesday afternoon are, "When Manure Is Not Available: What



Then?" and "Blanching Celery with Ethylene Gas." Wednesday morning at 9:30 Dr. J. E. Knott, of State College, Pa., will report on variety trials of vegetables; at 10:30 Prof. N. Worthley will discuss insect pests and at 11:30 the subject of price cutting and use of market reports will come in for attention by Mr. P. R. Taylor, of the Pennsylvania State Bureau of Markets. A Growers' Round Table Discussion is scheduled for 2:00 P. M., Wednesday, and the Annual Business Meeting convenes at 3:30 P. M. Market growers cannot afford to miss this gathering.—Gilbert S. Watts.

New Jersey Peach Growing Cost High

IT COSTS New Jersey peach growers about $133.54 to develop an acre of peach orchard to the production stage. This includes all expenses of the orchard, but not the value of the land, and exceeds by a wide margin the cost of developing orchards in other competing sections of the East. These figures are the result of a comprehensive study made this year by Allen G. Waller, economist, New Jersey Agricultural Experiment Station, and Harry B. Weiss, of the Bureau of Statistics and Inspection of the Department of Agriculture.

The survey further shows that the cost of developing a peach orchard in New Jersey for three years, including the cost of the land is about $333. It was found that the cost on the Eastern Shore of Maryland was $138.50 per acre; Chambersburg, Pennsylvania, $151.87, and Fort Valley, Georgia, $157.95.

Despite the heavy costs of bringing an orchard to maturity, New Jersey stands seventh in the United States, being led by Georgia, North Carolina, New York, California, Tennessee and Pennsylvania.

The Elberta variety continues to lead in popularity with 37 per cent of the acreage planted to this variety. There has been a rapid change in recent years in the varieties grown in New Jersey and with the new varieties now being developed the entire schedule will undoubtedly be changed again within a year or so.—A. K.

Grange Issues a Challenge

MOORESTOWN Grange has started a move for Inter-Grange interest. They believe that the discussion of some of the farm problems of the day will do much to create additional interest in the Grange. To accomplish this end it offers a challenge to any Grange for a debate at any time.

It has selected an affirmative and a negative team and is willing to take the opposite side from any Grange accepting the challenge.

The question they have selected is: Resolved, "That the economic condition of agriculture is keeping abreast with the economic condition of other industries."

Moorestown is prepared to defend either side. Any Grange wishing for a debate is asked to correspond with Mary Haines, 123 Chester Ave., Moorestown, N. J.—A. K.

Educate Toward Quality Goods

IT IS quite common for me to hear city folks who have the habit of motoring into the country, Sundays and holidays, complain that farmers ask as much for their products right at home as they could get for them delivered at the city homes of customers.

They do not stop to think that fresh, farm-matured products are worth more than the stale, artificially matured goods of the city markets which, under present conditions, must be harvested and delivered in the city before they have matured. Such city consumers need to be educated up to where they can appreciate the difference.

Doesn't any manufacturer demand proportionately more for merely a family supply of anything than for carload or truck-load lots, if he will accommodate the small order at any price?

Should Abolish the Practice

I frequently hear city consumers complain that products such as early peaches and melons purchased from city dealers are tasteless or have a flavor they describe as "green." The stuff is green because it did not mature where nature intended.

The tendency is still toward throwing more and more half-matured products on the market. This system, which is equally injurious to both producer and consumer, can be abolished, but only by concerted effort. A federal ruling might help. State rulings are likely to be inefficiently handled.

Another help would be for small groups of growers to pool their products and the expenses of delivery and of hiring locations in the retail markets and operating the stalls. They might not make more at first but after the consumers caught the idea and discovered the difference in the quality of the goods there is no question as to where they would buy. This is not guessing. I know the growing end and I know several city markets as you know your farm.—E. A. W., Maryland.

Vineland Will Hold Show

THE Vineland Poultry Association announces that they will hold their usual show on January 11, 12, 13 and 14, 1928. This announcement is made to retract wild rumors that no show would be held this year. The show date has been held back owing to difficulty in getting a suitable hall for staging exhibits.

Nearly $2000 in prize money is to be distributed and the utility flocks will be featured as well as the exhibition classes. The premium lists are available and can be secured from John Weed, Vineland, N. J.

The Vineland Poultry Association reports a most successful season for the year just closing. They have gained 140 new members during the past year who are interested in the production of better poultry and bigger eggs.—A. K.

Binder Twine Mill in Yucatan Saves Thousands of Dollars For Farmers

Located in Yucatan, Mexico, is the large, modern mill which manufactures FIDELITY Binder Twine for American farmers.

This mill is situated right in the heart of the richest Hennequen Sisal district where 85% of the world's supply of this binder twine fibre is grown.

Because of its advantageous location the mill saves considerable money in freight, handling and other charges which always add to the cost of raw material and it passes the savings on to the American farmer in the form of better prices.

FIDELITY Binder Twine is made of 100% pure long fibre Hennequen Sisal—it does not contain mixtures of other fibres.

This is of extreme importance to users of binder twine for experts say that twine spun of 100% pure Hennequen Sisal can be absolutely guaranteed against destruction by crickets and other insects.

And twine that is made of 100% pure Hennequen Sisal will always run smooth and even throughout—there are no troublesome thick and thin spots in FIDELITY Binder Twine.

American farmers can save themselves thousands of dollars every harvest time and get better twine if they will insist on FIDELITY Brand Binder Twine. Dealers have it or can easily get it.

FIDELITY is put up in 5 and 8-pound balls, guaranteed average length, 500 feet to the pound, 85-pound tensile strength.

Free samples of FIDELITY Binder Twine will be sent to any farmer who will clip the coupon below.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Editor:—I live on a farm and last summer my brother and I helped to mow and rake hay and haul it and unload it.

I like to bake cakes and here is one of my favorite recipes.

BURNT SUGAR CAKE

Burn ½ cup of white sugar in a small pan until liquidized then add ½ cup of boiling water stirring it well then set aside to cool. Cream together 1½ cups of butter or lard then add 3 egg yolks, 1 cup cold water, 2 cups of flour and beat the batter 5 minutes. Next add the whites of eggs well beaten and ½ cup flour to which has been added 2 teaspoon or baking powder. Flavor with 2 teaspoons of vanilla and add burnt sugar. Bake in layers in moderate oven.

Make icing in same pan as sugar was burnt in. One cup sugar, ½ cup of cream or milk, 2 tablespoons of butter. Cook until it forms a soft ball in water. Remove from fire and beat until it begins to thicken. Spread on and between layers. This makes a very good cake when made just right.—Evelyn Spade, Fulton County, Pa.

Dear Forum Editor:—I live on a farm. We have cows, mules, pigs and chickens. I have a mile and a half to go to school. I always help with the barn work every evening. I like to read the letters that the other girls and boys write to you.—Kenneth McNitt, Juniata County, Pa.

MY NIECE AND HER PAL
Jennie Stramski, (X), Wyoming Co., Pa.

Dear Forum Editor and Friends:—I have been reading the page in Pennsylvania Farmer for quite a few years but never wrote a letter before. I enjoy the letters very much. I like to follow the recipes on the page. I can cook and bake real well. I like to bake cakes and try new recipes. My mother belongs to the Society of Farm Women and I enjoy going along to the meetings. Here is a recipe Miss Forbes gave at our last meeting and I tried it myself and we all liked it, so I will pass it along to the rest of you.

PINEAPPLE TAPIOCA

1 qt. milk
2 eggs
1 cup sugar
½ cup tapioca
1 can pineapple
½ teaspoon salt

Heat milk in double boiler and stir in tapioca and when it begins to thicken add yolks of eggs, salt and sugar and stir frequently till thick. Remove from fire and cool, then fold in the beaten whites and the pineapple chopped fine. Drain the pineapple and do not put the liquid in. Wishing you all a Merry Christmas.—Ethel G. Eshleman, (X), Lancaster County, Pa.

Dear Cousin Ruth and Forum:—I haven't written for a long time and I'm not going to make this very long but I would like to tell you about a little trip we took to Gettysburg this summer.

We started about eight o'clock in the morning and got there about half past ten. We saw many interesting things, while we were there. We saw the Pennsylvania Monument and I took a picture of it. I also took one of the Devil's Den. We got a drink from the spring at the Devil's Den and also from the spring called Spangler's. It is very pretty at Spangler's spring. We saw the Jenny Wade house and we went through it. We were up in the Pennsylvania Monument and looked all around. I'll tell you some more about it some time again if you like to hear about trips.

We built a large chicken house and raised a lot of chickens. I go to school at Hisner's. Our school planted a tree at the Parish House last week. Our teacher put one shovelful of ground into the hole and then each one of the pupils put one in.—Frances Neidig, Cumberland County, Pa.

I surely do enjoy hearing about your trips. I'm sending you a Forum membership pin.

THE FORUM EDITOR.

Dear Forum Friends:—How are you Forum Friends? All well? That's fine. So am I. It is snowing outdoors and it is very cold. I suppose some of you are living where it is warm. Where is there a corner for me? I see one just big enough and guess I will keep it now that I got it. I always read the Y. P. F. first. I like it very much. For pets I have three cats, Tommy, Dwarf and Coonie. We have one dog whose name is Chubby. We have two horses, Topsy and Betsy. We also have forty-four head of cattle.

This is the first time I am writing but, of course, not the last time. I will tell you lots more the next time. I can't stay so long the first time because I don't know many of the Forum friends. Here I go back home.—Arline Polnak, Wayne County, Pa.

Don't forget to call again sometime in the near future. I hope you enjoyed your trip as much as we enjoyed having you.

THE FORUM EDITOR.

OLD FAITHFUL
Margaret Atkinson, (X), Clarion Co., Pa.

Dear Forum Friends:—We have taken Pennsylvania Farmer for quite a number of years. I like to read the Forum page. For pets I have a dog and a kitten. The dog's name is Rags. When he wants something to eat he will come and sit down on his hind feet and hold his front feet up until we give him something. My kitten's name is Lindy. He is a tiger cat.—Vera Belle Knauff, Mercer County, Pa.

Dear Forum Editor:—I would like to become a member. I have two dogs and three kittens. The dogs' names are Sailor and Mitzy. The cats' names are Sunshine, Annie and Niger.—Glenn Hermon, Lawrence County, Pa.

WE HAVE GOOD TIMES TOGETHER
Myra Klingerman (X), Schuylkill Co., Pa.

Dear Forum Friends:—For pets I have a cat and a cow named Minnie. When she is out in the field I call her by name and she comes running for she knows I always have something for her to eat. I go to a consolidated school. They just built it this summer. It is a very attractive building. There are 104 pupils in all. Here are some riddles:

What state in the United States is round at both ends and high in the middle?

What part of a turkey is a measure?

If a bear were to go into a dry goods store what would he want?

What is the difference between a soldier and a bombshell?

If a shovel and a rake come to $7.50 what would a ton of coal come to?

Why is an egg and a colt alike?

Why does a dog wag his tail?

I hope you all like to answer riddles as well as I do. I wish the Forum page great success.—Mary E. Tanner, Montour County, Pa.

Dear Forum Friends:—I have never written a letter to you before but I would like to become a member. I have a big dog whose name is Ned. He brings home the cows, sheep and pigs. We have chickens and horses, too. I have just come back from a trip to California. If you wish me to I will tell you about it. I am sending you some riddles:

1. What goes up and down and never touches the ground or sky?
2. What goes through the woods and kills but never eats?
3. What is black as a coon, round as a moon and has a tail on it?
4. What is orange inside and orange outside?—Elizabeth Cunningham, (X), Washington County, Pa.

I'll be delighted to hear about your trip to California. Don't forget your promise.

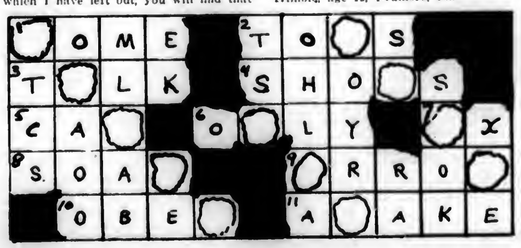
THE FORUM EDITOR.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—For some reason it seems to me that we are all feeling better acquainted in Our Little Corner. I am very glad of that, because it is always good to find new friends and to hear from those I seem to know so well. I've still another message for you this week, and it is one you may pass on to your little friends and the big friends, too. The puzzle looks something like a cross-word puzzle, but it is really a little different. You don't have to find all the letters, because I have given you most of them. The first word across (marked "1") is where you live; the one marked "2" means playthings; "3" means to speak; "4" is something you wear on your feet; "5" is something you wear on your head; "6" means by itself (without others); "7" is something used in chopping; "8" is something used when you wash up after work and play; "9" is a word meaning mistake; "10" means to do as you are told; "11" is what you are when you are not asleep. You certainly will be what "11" says when you solve this puzzle. The real fun now begins. For, when you have filled in the letters which I have left out, you will find that the letters in the funny little wreaths, if you read diagonally downwards, will spell three words. One word has five letters, the next has three letters and the last has four letters. That is my message to you. When you have found this message, send it to me on a postcard or in a letter so that it reaches me by January 7th. Remember to tell me your name and post office address, in what county you live, when your birthday comes and how old you are. You'd be surprised that every week somebody leaves out some of these necessary things. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the December 10 issue is: ONE GOOD TURN DESERVES ANOTHER.

The prize winners are: Clarence Bassett, age 10, Danville, Pa.; Bertha Bieber, age 10, Harmony, Pa.; Ruth Marie Cooper, age 10, Denton, Md.; Catherine Flick, age 10, Glen Rock, Pa.; Emily Smithoors, age 9, Elmer, N. J.; Ralph L. Songer, age 13, Fairmount City, Pa.; Leonard Swann, age 9, Perkiomenville, Pa.; Richard H. Trimble, age 12, Drumore, Pa.



Riddle Answers

Answers to riddles submitted by Susan Derstine, Montgomery County, Pa.

1. When it's a little cross.
2. A watch.
3. O. I. C. U. (Oh, I see you!)

Answer to riddle submitted by Martha Herman, Union County, Pa.

A splinter.

Dear Forum Friends:—I live on a farm. I have two sisters, Jennie and Mildred. We have fun together. We have mules, cattle, hogs and small pigs, and an Airedale puppy called Barney. He is brown and black. He likes to bring the cows and he follows us everywhere we go. He also likes to play tag and hide and seek with us.—Gladys E. Miller, Lancaster County, Pa.

Dear Forum Friends:—I live in the country on quite a large farm. For pets I have a dog and cat. The dog's name is Tag and the cat's, Jerry. I am 14 years old and am a sophomore in high school.

I live eight miles from the high school so I have to board. The high school is in Hawley. I like to ski and sleigh ride. I think the country is a good place to live.—Revel Reineke, Wayne County, Pa.

PASSING EVENTS IN PICTURES

1.—The "Carnegie," one of the most unusual vessels afloat, was built by the Carnegie Institute of Washington almost entirely of non-magnetic material so that it could be used to make magnetic surveys of the oceans. It has made six cruises, carrying seven scientists and a crew of seventeen, and will sail on its seventh cruise in May, 1928.

2.—The Joint Army and Navy Board in session in the Navy Building, December 8th.

3.—4-H Club girls from thirty-seven states whose outstanding work in home economics won for them a trip to the sixth National Boys and Girls Club Congress held during the International Livestock Exposition at Chicago.

4.—The United States Capitol at night with the great dome reflected in the rain-swept pavements.

5.—A happy little French girl riding the latest thing i roadsters.

6.—Part of the New Year's celebration in Pasadena, California, will be the construction of a picture puzzle map. As the trumpeters call forth the states, pages bearing the pieces lay them in place.

One Dish Meals Find Favor on Cold Days

ONE-dish meals—combinations of meat and vegetables—have a savory odor which tempts the appetite of the most fastidious.

Rolled flank steak with vegetables prepared as follows: use one pound of flank steak or round if the former cannot be obtained. Dredge well with 2 tablespoons of flour to which 1 teaspoon of salt has been added. Mix 1 cup of bread crumbs, 1 small onion (minced), 1 tablespoon butter, 2 tablespoons hot water and ¼ teaspoon salt. Spread over the steak, roll and tie. Sear in some drippings until well browned. Place in a large baking dish, adding 1 cup of tomatoes. Cover and bake 45 minutes in a moderate oven.

Peel and cut in ½-inch dice, 2 potatoes, 3 carrots, 1 turnip and 2 sliced onions. When the meat is partially cooked, place the vegetables around the meat, sprinkle with 1 teaspoon of salt, cover and cook one hour or until the vegetables and meat are tender. Brown Betty or some other baked fruit dessert could be prepared and baked at the same time.

Other baked meals may be: (1) Boned fish, potatoes, scalloped tomatoes, apple pie; (2) Scalloped macaroni with cheese and tomatoes, whole wheat muffins, baked apples served with cream.—Marie C. Doermann, N. J. Extension Food Specialist.

When the Chores Are Done

"Summer fading, Winter comes—
Frosty mornings, tingling thumbs,
Window robins, winter rocks,
And the picture story-books."

ONE of our wide-awake Pennsylvania women has completed six of the reading courses outlined by the United States Bureau of Education. What a fine record that is, and how much she has enlarged her vision of life! I am quite sure that many women would read more and study a bit if they knew just how to go about it. Not all rural communities have libraries, and often folks find it bewildering to seek a book that might please them. Here is just where reading courses can supply needed advice.

We should keep on developing all through life. Formal education may stop when we are through school. But education continues. Experience is a fine teacher but reading and study with experience broaden your usefulness and increase your enjoyment. Systematic reading will shorten your wintry evenings, put you in touch with master minds, and make you a bigger, better mother, wife and neighbor.

The Bureau of Education has outlined thirty courses. Among them are such subjects as history, citizenship, architecture, poetry, foreign countries, health, parents' problems, music and so on. If you enjoy good fiction, they have outlined the very best of that. If you are uneasy about the tiny tot that is to start in public school next year, the course on "The Pre-School Child" will be just the thing for you. I am sure that your especial likes can be strengthened and enlarged by taking up any one of these courses. For direct information on any subject, write to Bureau of Education, U. S. Dept. of Interior, Washington, D. C. The bulletins are free, and are rich in suggestion. —Gertrude S. Stewart.

Timely Tips

DR. ROYAL S. COPELAND says: "We eat too much. We live on one-third of what we eat; and the doctors live on the other two-thirds."

• • •

Every piece of useless furniture discarded means one less thing to dust and keep in repair.

• • •

Petroleum ointment will remove mildew from leather.—A. F.

• • •

Conduct is contagious. Do you want to spread joy or grief?

• • •

Books kept on open shelves are more likely to be read than those shut behind glass doors.

• • •

Buttons on heavy coats will stay sewed on if the thread is run through smaller buttons on the reverse side of the material.

• • •

Down-at-the-heel shoes are likely to give that "down-at-the-heel" feeling; they throw the feet into an unnatural position that puts a tiring strain on leg and back muscles.

• • •

Plenty of sunshine is a good preventive of colds. While the days are short and the sun shines less, make a point of getting out-of-doors in the middle of the day when the sun is warmest.

The Circular Cut Assures Chic

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

6007.—Four sizes: 8, 10, 12 and 14 years. To make the dress as illustrated for a 12-year size will require 2½ yards of 40-inch material with ⅝ yard of contrasting material for facing on collar and belt. Pattern, 10 cents.

5992.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. To make the dress as illustrated for a 38-inch size will require 3½ yards of 40-inch material with ¼ yard of contrasting material for facing on collar and vestee. Pattern, 10c.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

—*Happy New Year*—

Stop—Go—Stop

A play in three acts.

Characters

Mamma, a fat woman.
Willie, a thin boy with large eyes.
Time: The present.
Place: Ballyville.

Act One

(Scene: A living room with table and couch. The table stands in center of room and on it a bowl of apples. Door at rear of room and door to kitchen on side opposite couch. Willie is seen near table reaching for apple. Mamma is entering from kitchen.

MAMMA: Willie! (Willie, astonished, turns to her.) Whenever you want an apple after this I want you to ask me if you may have one.

WILLIE: But Mamma, I never did before.

MAMMA: Never mind. From now on, you must ask.

WILLIE: Why?

MAMMA: Because I say so. And mind you, if I catch you taking an apple without permission you will be locked in that dark closet.

WILLIE: Yes, Mamma.

(Curtain)

Act Two.

(Early afternoon. Mamma is seen sleeping on couch.)

WILLIE: (Running in through rear door.) Mamma, may I have 'n apple? (Stops and stares at Mamma, who sleeps on.)

WILLIE: MAMMA! MAY I HAVE AN APPLE?

(Willie stares down at the sleeping woman, thinks hard, looks over at apples and back to the sleeping woman. Thinks again, does a caper and runs out through kitchen door, returning at once with an alarm clock. This he winds and sets on table. Alarm goes off. Mamma pulls blanket up around fat chin.)

WILLIE: Mamma, may I have 'n apple? (He gets no reply, looks determined, runs out through kitchen door, returns with big tin dishpan. He winds clock, sets it into pan and places pan beside couch on the floor. Alarm goes off. He stands back to watch effect. No effect. Mamma turns over, face to wall. Willie now with one single thought in mind, that of waking Mamma, winds alarm again, sets clock into pan and holds the pan up over her head. Alarm goes off. Mamma wakes.)

WILLIE: (Shouting) May I have 'n apple? May I have an APPLE?

MAMMA: Can't you take an apple without spoiling my nap? Go away. (She settles down for another nap. Willie stares and stares.)

(Curtain)

Act Three

(Late afternoon. Scene the same.)

(Willie comes running in through rear door, grabs an apple, bites into it with relish, and is about to leave the room when Mamma comes in through kitchen door. She stops, arms akimbo, and looks stern.)

MAMMA: Willie!

WILLIE: Yes, Mamma.

MAMMA: What did I tell you? (Willie squirms.) Come here. (Willie advances. She seizes him by coat collar.) You will remember what I tell you after this. Into the closet you go. (Willie gazes at her in speechless bewilderment.)

(Curtain)

—*Happy New Year*—

After Christmas

AFTER Christmas save your holly berries and tuck them away in the soil of potted ferns, palms or begonias. Do not expect young holly plants in a few days or even weeks as the seeds germinate slowly. But much later you will find tiny green shoots springing up. In a year they will be ready to transplant to pots of their own and in two or three years you can put them out in the ground where they will grow rapidly.—L. M. T.

—*Happy New Year*—

Who Can Help Us?

WHO knows the recipe for home-made dry yeast? And who can send the recipe for making old-fashioned cheese using cottage cheese and caraway seed flavoring? Address your letters to Household Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

THE court got to work at noon. It proceeded to bring accusation against all of us by name as violators of the act to prevent riotous assemblies. Then the act was read. I think each of us recognized his death warrant in that reading. It provided that if ten or more persons, being unlawfully, tumultously and riotously assembled together, to the disturbance of the public peace, after being openly commanded by any justice or sheriff to disperse, should notwithstanding remain together one hour thereafter, they should be adjudged guilty of felony and suffer death.

All of us who had been at Alamance met the conditions of the act. Person only of our group had not been at the fight. This was noted by the prosecutor almost immediately. He rose and informed the court that he was not ready to proceed against Thomas Person, some evidence lacking at the moment, and asked that he might be taken back to jail to await later trial. This was done.

The rest of us were asked for our plea. As a matter of form, but with no feeling that it would make much difference, we pleaded "not guilty." The governor frowned at this. I thought I could see his lips form the words "stubborn rascals."

The prosecutor brought in his witnesses. The first were officers who testified to the assembly at the Alamance. Then one Philemon Hawkins, aide to the Governor, testified that he had ordered the mob to disperse. Then various men were brought in to prove that the prisoners were a part of this mob and had been taken with arms in hand. This part took some time; identification of the different prisoners was required.

One militiaman boggled at identifying me.

"You are sure the prisoner, Daniel Craig, now before you, is the man you captured at Alamance?" droned the prosecutor.

The soldier under oath, was suddenly conscientious. I had the look of the chap, he said, but there were plenty of sandy-haired lads in the world. He thought I was the man, nay, he would say that I was, but he did not just care to swear to it.

"Don't be a fool, man," said the prosecutor sharply. "Of course, he's the man. Swear to it and get out."

The soldier shook his head. This was court, wasn't it, and not drill? Well, he had kissed the book, and he wasn't going to risk hell fire by swearing to the wrong man. Then his face brightened.

"I give him a clout behind the ear with the pistol butt," he declared eagerly. "He'll still have a lump there or maybe a scar. Let me look at him."

The court fumed at this, but the fellow was persistent, so I came forward and he ran his fingers over my head. He gave a pleased chuckle.

"Yes, sir," he cried, "this is the very man. I hit you a good hard clip, didn't I, lad?"

"Do you swear to the prisoner's identity?" snapped the prosecutor.

Of course the soldier would. Quite pleased with his own wit he swaggered down off the stand, and with him went my scant hopes of being saved from condemnation.

We were marched out for our lunch presently, not because the prisoners were supposed to need food, but because the officers and the court did. As we ate, we had a chance to talk. I protested that the law could not be used; every man of the three or four thousand at Alamance was guilty under it. So probably were the thousand or so at Salisbury. The Governor could not hope to hang thousands of men.

"He won't, sonny," Pugh comforted me grimly. "He'll just hang us. Just for a sample like."

WE LEARNED during the noon hour, too, why the trial was being rushed. Tryon had just received word of his appointment as Governor of New York and was in a hurry to start for Newbern. But he intended to stay until the trials were over. And the executions, some one asked. The executions, too.

Back to court we went. The witnesses for the prosecution paraded all afternoon long. When we were brought back to the jail, they were not quite done and we of the defense had not said a word. Some of us doubted whether we would ever be permitted to. All knew that nothing we might say could help. We were nominated as the means of finishing the terrorizing of the back country; and His Excellency was there himself to see that this final act of his campaign did not go wrong.

Merrill, I think, was the first to notice that the jail was empty when we got back to it. Person was not there. He had been present at noon.

"They've made away with him," he observed gloomily. "He's too big a man to hang, so they take him out and shoot him on the quiet."

"We'll find out," cried Pugh and began to bang on the door. He was quite reckless, as his jibe at the governor that day proved. "Why shouldn't a man say what he wanted to?" he asked. He was going to be hanged anyway; he was entitled to what fun he could get while he still lived.

The jailor came running. He was not a soldier, but a civilian employe of the county. He was flustered and beseeching.

"Not so loud, Mr. Pugh," he begged. "Everybody will hear you."

"What have you done with Person, you rogue?" Pugh persisted.

The jailor fanned his hands in the air. He had the manner of a man who is about to go into a fit.

"Do you want to hang me—and him, too?" he gasped. "Be quiet."

We all crowded over to the door. What was up?

"Mr. Person is gone for the moment—oh, I hope there are no informers here. It will do you no good to tell the officers—they will hang you anyway—nothing can move them. He will be back. He is your good friend. Be quiet and still, or we shall both be ruined. If anyone should come to call the roll, some of you might—it will be pretty dark—some of you might answer for him."

All this was beyond us. Pugh put the question most of us thought.

"You say he will be back?"

"In the morning, certainly. Unless his horse breaks a leg—but then he would get another one. No, he must be back. He would not ruin me. And you gentlemen will be quiet?"

"We will," said Pugh, "but cursed if I see what you are up to. However, we'll wait till morning before we begin to yell about it."

The jailor thanked us and hurried off. We got an exceptionally good meal that night, and I think he was responsible. Certainly his pale and agitated face appeared in the window afterward, and he warned us again to be still on the subject of Person's absence.

"You will not regret it," he told us finally. "The jailor is a good man to have for a friend."

"I would rather have the hangman or the ropemaker for a friend," Pugh commented after he had gone. We were still puzzling about Person. It seemed that he and the jailor were working together on some plan, but what it was he could not fathom.

After we had discussed this for a time, I came back to Pugh's remark about the hangman or the ropemaker. "Why be friends with them?" I asked.

"A good reason," he said. "Were you ever at a hanging? No? Well, I was once, at Newbern. The rope broke and the poor fellow was left half strangled. So they had to bring him back, put a new rope on and try it again. I don't like that. That's why I say I hope the hangman and the ropemaker are experts."

I HAD a hard time sleeping after that. Early in the morning, when I had rolled over for the twentieth time, the door opened softly and a man came in. He picked his way over the sleeping men and lay down in the corner.

Idly I wondered who it was. In the first light of morning, I looked over. The man was Person.

My shout woke the rest. We swarmed around Person. He got up blinking and not altogether pleased.

"Yes, I was gone and I'm back," he said. "No word of this should get out. Don't gossip about it. The guards might hear. Don't ask me how it was done. It can't be done again. Now I want some sleep."

He may have slept, but some of the rest of us did not. We were curious and the curiosity kept our minds off our own fate. Pugh, as usual, figured out some sort of an answer.

"Here is the way I reckon it," he told us finally. "The jailor owes Person something—quite a bit maybe. Well, Person tells the jailor to get him a pass and a horse. He'll ride out, go home, burn his papers—he may have letters from Husband hid away—and get back before anybody finds it out. You heard them say they were looking for more evidence against him. If he's burned it, then he goes free at the end. These papers are burned, I say. That's why he can sleep so sound now."

THAT morning, Saturday, we spent in the jail. We learned why from the jailer. Some of the officers had given a banquet in honor of Tryon's appointment to the governorship of New York. Most of them were in no shape to attend court until late.

In early afternoon we marched to court again. The same business of identifying the prisoners went on. Finally the defense was called on. Merrill and two others declared they had been misled, that they regretted their rebellion and were willing to throw themselves on the mercy of the court.

"Do you change your plea?" asked our justice.

Merrill nodded. "I plead guilty, sir," he said.

"That's better," commended the justice. "Now we shall get on faster." Pugh was of different metal. He told the court that the law was unjust and that no one but a bloodthirsy scoundrel would make use of it. Here he looked at Tryon. Two guards came up.

"Shall we shut his mouth, sir?" asked one.

"Let him have his way. It is his right," Tryon declared.

"You're more of a man than I thought," Pugh declared. "My thanks to you."

At this insolence, the officers exclaimed again, but the governor did not seem displeased. Pugh went back to the law. It was a violent affair, he said, so foul that even the King would not permit it. (This was true, as it turned out.) He also denied the power of the court to act.

"When you hang me, as you will," he said finally, "I want you to know that you that talk so much of mobs are no more than a mob yourself. You will be ordinary murderers instead of officers of the law. May the curse of blood unlawfully shed follow you all to an early grave."

He sat down. The court, looking somewhat exhausted, moved to adjourn till Monday.

Sunday was one of the worst days I have ever spent. We were kept inside all day. It seemed that all we could talk about was how soon the trial would be over. As with common consent none talked of what would happen after that.

(To be continued next week)

TIGHT BINDING

Markets

December 22, 1927.

Editors' Note:—The suspension of trading on account of the Christmas holiday makes it impossible for us to publish our usual complete market reports. The quotations given on this page, however, reflect the general trend of prices.

PHILADELPHIA MARKETS

PRODUCE

Vegetables—BEETS, nearby, ⅝ bskt, 40@50c; few, 60c; bch, 2½@3c. CABBAGE, Nearby ⅝ bskt, 25@30c; Savoy, 20@25c; bu hmpr, Savoy, fancy, 65@85c; red, ⅝ bskt, 50@60c. CELERY, N Y, 2-3 crate, rough, $1.40@1.75; Penna, wired bchs, 5@15c; mostly 10@12½c. MUSHROOMS, Penna, 3-lb bskt, extra fancy, white, $1.15@1.25; fair to good quality, 75c@$1; poor, 40@60c. PARSNIPS, nearby, ⅝ bskt, 35@50c; fancy, 60@75c. POTATOES, Penna, 120-lb sack, round whites, U S, No 1, $2.30@2.50, mostly $2.40; 150-lb sacks round white, U S No 1, $2.85. Street sales, Nearby ⅝ bskt, red skins, No 1, 50@55c; few fancy, 60c; poor, 40c; 100-lb sacks, $1.25@1.50; Penna, 120-lb sacks, round whites, $2.25@2.50; 90 @ 100-lb sacks, $1.75@2. SQUASH, N J, bbl, Hubbard, $4. SWEET POTATOES, N J, ⅝ bskt, yellow, fancy house sweets, 85c@$1; poorer, 60@75c; reds, fancy house sweets, $1.15@1.25; poorer, 75c; No 2, 30@50c; Md and Del, bu hmpr, yellow, $1@1.25; few, $1.30; poor, 75c. TURNIPS, nearby, ⅝ bskt, white, 30@40c; poorer, 15c; Aberdeens, 25@30c; N J, rutabagas, 35@50c; Penna, 50@60c.

HAY AND GRAIN

Baled Hay and Straw—Hay, timothy, No 1, $18.50@19; No 2, $17@17.50; No 3, $15.50@16.50; timothy, clover mixed, No 1, $17@19.50; No 2, $15.50@16. Straw, straight rye, $20@21; wheat straw, $14@14.50.

Wheat—No 2 red winter, $1.37½ bid; No 2 red winter, garlicky, $1.36 bid; low grades selling at the usual trade differences.

Corn—Nominal.

Oats—No 2 white, 64½@65½c; somewhat heavyweight stock commanded a premium; No 3 white selling at a discount of 1@2c from No 2 white.

DAIRY MARKET

Butter—Solid-packed creamery, in tubs, higher than extras, 54@57c; extras, 92 score, 53c; 91 score, 50½c; 90 score, 46c; 89 score, 42c; 88 score, 41c; 87 score, 40½c; 86 score, 40c.

Cheese—New York, whole milk, flats, held, 29½c; longhorns, round lots, 29@29½c; jobbing, small lots, 21@32c; single daisies, fresh, 29@29½c; held, 29½c.

PITTSBURGH MARKETS

PRODUCE

Vegetables—CABBAGE, steady; N Y and Penna, bulk, bbl, Danish seed, $1@1.20; Va, Savoy, bbl, $1.75@2; car lots, bulk, ton, N Y, Danish seed, $11@11.20. ONIONS, 100-lb sacks, No 1 Michigan and Ohio, yellows, $1.85@2.25. POTATOES, 150-lb sacks, No 1, Michigan rurals, $2.75@2.85; Wisconsin whites, $2.50@2.85; Maine Green Mountains, $3@3.25; N Y whites, $2@3.15.

Fruits—APPLES, steady; barrels, Virginia, Baldwins, $6; bu bskt, N Y, Baldwins and Wealthies, $1.80@2; Virginia, Starks, $1.75; Delicious, $2.50@2.75; West Virginia, Grimes Golden, $2@2.10; Staymen Winesaps, $2@2.50; Ohio, Baldwins and Stay nan Winesaps, $2.

LIVESTOCK

Hogs—Fairly active on heavies, trade generally 10@15c lower; bulk averaging weights 150 lbs up, $8@8.10; 140 lbs down and pigs, mostly $7.75@8.35, according to weight; best sows, $7.50.

Calves—Unchanged; bulk good and choice vealers, $14.50@16.50.

Sheep—Lambs moderately active; steady. Early top, $13.75; mostly $13@13.75; for bulk desirable, 70@85-lb lambs, ewes quotable at $7.

NEW YORK MARKETS

Butter—Firm; creamery, firsts, 58@59 score, 42@51c.

Live Poultry—Irregular; fowls, by freight, 19@25c; do, by express, 18@25c; turkeys, by freight, 40c; do, by express, 30@42c.

Dressed Poultry—Irregular. Turkeys, fresh, young, western, 31@43c; do, southwestern, 31@41c; southern, 32@48c.

Eggs—Irregular; fresh gathered, extra firsts, 47@50c; do, firsts, 45@46c; do, seconds and poorer, 30@44c; nearby henmery browns, extras, 57c; Pacific Coast whites, extra, freight, 52½@54c.

LIVESTOCK

Cattle—Steady; steers, $9@16; state bulls, $4@5.50; cows, $3@7.25.

Calves—Steady; veals; common to prime, $8@17; lightweight culls, $9@10; grassers and fed calves, $4@7.

Sheep and Lambs—Barely steady; sheep, $2.50@6.50; culls, $2.20@3.50; lambs, state, medium to prime, $11.25@13.25; choice to prime, Ohio, $13.25@14.25; culls, $9@10.

Hogs—Steady; light to medium weights, $9.50@9.75; pigs, $9.75 @ 10; heavy hogs, $9.25@9.50; roughs, $7@7.50.

HAY AND GRAIN

Grain—Rye easy; No 2 western, $1.22½ f o b N Y and $1.20½ c i f export. BARLEY, firm; No 2, $1.07½ c i f N Y. WHEAT, spot easy; No 1 dark northern spring, c i f, N Y, all rail, $1.47⅝; No 2 hard winter, f o b, N Y, all rail, $1.44⅞; No 2 mixed durum do, $1.35⅞; No 2 Manitoba, do, to arrive, $1.61⅜. In bond. Corn, spot, easy; No 2 yellow, c i f, N Y, all rail, $1.04⅜; No 3 yellow, do, $1.02⅜. OATS, spot, easy; No 2 white, 66½@66¾c.

CHICAGO LIVESTOCK MARKET

Cattle—Bulls strong, vealers steady, active trade on cutter cows at $2.25@3; few strong weight low cutters up to $3.50; vealers $1 downward to big packers; outsiders, $12@16; best fed steers, $17; bulk short feds, $12@15.

Hogs—Top, $8.85; bulk good and choice, 210@300-lb averages $8.45@8.80; 160@200 lbs, $8@8.50; light lights and pigs very uneven, generally 10@15c lower; bulk pigs, $7@7.25; few best strong weights, $7.40@7.60; bulk packing sows, $6.50@7.65; light weights upward to $7.90.

Sheep—Bulk, good lambs and desirable weights, $12.75@13.25; top, $13.65; good 92@100-lb offerings, $12@12.75; 100@110-lb kinds, $11@11.75; light throwouts, $10@10.75; 95-lb clipped lambs, $10.25; yearlings, $9.75@10.60; sheep steady; fat ewes, $6@6.75; top, $7; feeding lambs steady; bulk, $12@12.75.

GRASS SEED—WHOLESALE PRICES

December 22, 1927.

Cloverseed, cash, imported, $16.30; cash, domestic, $18.20; December, domestic, $18.20; December, imported, $16.75; January, domestic, $18.35; March, domestic, $18.20 bid. Alsike, cash, $16; December, $16; January, $16.25 asked; February, $16.45. Timothyseed, cash, $2; December, $2; March, $2.15.

LANCASTER MARKETS

LIVESTOCK

Cattle—Market dull on account of approaching holidays. Best steers, steady, top, $12; stockers and feeders steady, top, $12.

Boston Proclaims Beef Boycott

THE recent high prices for beef have caused considerable agitation. Boston proclaimed a boycott ion articles and editorials have been appearing in Philadelphia newspapers concerning the high cost of beef. Consumers have been encouraged to eat pork and other meats. An unusual feature of the situation is that it is the beef jobbers and dealers that started the commotion. Since this began wholesale prices of beef have dropped somewhat but the same thing occurred last year when there was no unfavorable publicity.

Secretary Jardine in a statement says that the present prices seem unduly high because they are compared with prices of the past few years, which were ruinously low to the cattle grower. This year for the first time since 1920 cattlemen as a whole have received fairly remunerative prices for their cattle. In the other six years cattle prices were so low most of the time that large numbers of producers were forced out of business and the number of cattle have been reduced.

This situation went so far that cattle slaughter will have to be reduced below the average of the last five years if the cattle business is to be reestablished on a basis where the number of animals slaughtered does not exceed the number of young animals raised.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

THE New Year is close at hand and it is the season when many new resolutions are made and broken, for it is hard to shed our bad habits in a day. This is a good time to look back over the old year and plan for the new; to go over our accounts of expenditures and receipts and determine which farming operations were profitable and why. Today accounts are necessary and the New Year is the time to start if you have neglected it in the past.

New Jersey has struck a good plan to help the farmers put their farming operations on a business basis. County agents are offering complete account books free of charge to those farmers who are willing to give up their books at the end of the year to the Farm Management Department of the New Jersey Agricultural College to summarize. The idea is not to pry into the farmer's business affairs. After the book has been summarized it is to be returned to him with any suggestions that would improve his business. If the farmer does not want to have his book analyzed at the end of the year he can secure the book for fifty cents, or at actual cost.

Choose Best Varieties

The longest days of the year are here, and there is more time for reading and planning than at any other season. Seed and nursery catalogs are arriving and many farmers are making their selections for next year as it is well to place the orders early. Dozens of strains and varieties of fruits and vegetables are described making it difficult to make selections.

In choosing the variety it is worth while to consider which are most popular on your market. The variety should be productive, disease resistant, suited to your locality and many other things but it is also important that it be the kind the consumers desire.

When I started to farm near Harrisburg, I planted the Philadelphia White Box radish. I had seen it grown and marketed successfully in this section and thought it one of the best white varieties. When I took them to market I found that very few people had seen them before and they were much harder to sell than the long Icicle type, or the red button radish. Gradually as people became acquainted with them they sold better, but it would have been far more profitable to have grown the variety that was most popular in that community.

In Philadelphia, the white and red globe radishes seem to sell equally well and comparatively few Icicle radishes are offered. The red and white radish, however, is termed the "monkey face" by the trade and is hard to sell at any price. Similar preferences exist in other markets throughout the state and in other states.

The market for sweet potatoes has been none too good this season and yet there has been a great difference in the selling price of stock of comparative quality. A red sweet potato tastes just about the same as a yellow one, but the price of red sweet potatoes has been consistently higher. In the South, the consumers want yams and do not care for the dry mealy type of sweet potato, but up here the yam almost invariably brings less money than the dry sweet.

Community Should Plan Crops

A short time ago I talked to a commission man, who is also a grower. He has had many years of experience and can see both the farmers and the dealers' problems. He suggested that the growers in a community should get together and plan their crops. One variety should be grown so that at a time when the local market was over-supplied a uniform carload of produce could be assembled and shipped to a distant market where conditions were more favorable. He said that under present conditions, one grower plants Valentine string beans, another Bountiful and so on, so that it is impossible to get a car together that would attract buyers.

This not only applies to vegetables but also to fruits. A straight car of Elberta peaches would be more salable than one made up of Elberta and three or four other varieties. There are some difficulties to such a plan but it presents fewer complications than some of the proposed schemes of farm relief.

Final 1927 Crop Reports

ABOUT $325,000,000 is the estimated farm value of 19 commercial truck crops grown on 2,400,000 acres of farm land during 1927. This covered all the leading vegetables, including melons, strawberries and the early southern potatoes. Both acreage and total value of these crops was a little lower than in 1926. Production of the most important crops was greater, though a few fell behind. Compared with the November preliminary report, the total apple crop estimate was increased about 4,000,000 bushels to 123,455,000, or half of the production for 1926. The commercial apple crop is now placed at 25,900,000 barrels,—about 2,000,000 more than in November but one-third less than last year. Most of the increase over the November report was in Maryland, Virginia, West Virginia, Idaho, Washington and California. The 1927 peach crop estimate was reduced slightly to $45,463,000 bushels, but pears were raised since November to 18,072,000 bushels. Grape production estimate was lowered to 2,464,712 tons. Compared with 1926, peaches were lighter by 35 per cent, pears lighter by 28 per cent, but grapes were a slightly heavier crop.

The value per unit of the various tree fruits and grapes is much higher than in 1926, but in about half the cases, total farm value is less, because of the sharply reduced crop. The total commercial apple crop has a value one-fourth greater than last season. The cranberry crop in five states is estimated at 496,000 barrels, or one-third less than last year. Chiefly because of necessary changes in figures for the North Central potato region, the crop report for potatoes was increased about 2,000,000 bushels over the November figure and now stands at 402,149,000 bushels, as against a revised 1926 crop of 354,328,000.

Holiday Markets Unsettled

Review of the Week Ending December 24

POTATOES—Prices of potatoes have shown little change during the past week. The markets have been dull in all sections of the country and trading has been limited. Supplies at most consuming markets have been moderate to liberal but shipments have fallen off slightly. Growers at Maine and New York State shipping points have been holding for higher prices but considerable stock has been shipped on a commission basis. There is not much interest in potatoes just previous to the Christmas holiday and some dealers have lowered prices in order to cut down demurrage charges over the long holiday. There will be very little business on the Saturday preceding Christmas. The crop estimate report for December raised the estimated production approximately 2,000,000 bushels with the chief increases in Pennsylvania and Michigan. Maine's crop was estimated to be slightly smaller than was expected last month, while New York's prospects were unchanged.

POULTRY.—The New York market for live fowl was barely steady during the early and middle part of the week. Real fancy stock was in fair demand and chickens were firm. The turkey market was unsettled and weak with liberal supplies and prices lower than at Thanksgiving.

APPLES—The apple market has been rather unsettled during the past week. The holiday demand for this fruit did not materialize and if anything the market has been somewhat weaker. Prices have not shown much change but trading has been more quiet.

EGGS—The New York egg market was generally firm on fresh eggs. Fresh brown eggs and mixed colors were firm but large sizes of Pacific Coast white eggs declined.

HOME-GROWN VEGETABLES—Mushrooms from nearby sections of Pennsylvania were plentiful in Philadelphia and moved slowly. Toward the close of the week a better demand developed and prices advanced sharply on the fancy white grades. This condition also existed in New York. Pennsylvania and New Jersey growers are shipping considerable quantities of root crops to Philadelphia. Parsnips are selling fairly well, especially when washed and graded. Beets and carrots have been dull and white turnips weak. Pennsylvania rutabagas have met a moderate demand. Celery showed some improvement prior to the holiday and sweet potatoes were more active.

Why I Voted Against Vare-Smith

(Continued from page 3)

country and Senate were shocked, the Senate declaring the expenditures of such sums "contrary to a sound public policy, harmful to the honor and dignity of the Senate and dangerous to the perpetuity of free government."

Three million dollars was spent in the Pennsylvania primary carried by Vare and his political machine, who lost at the election every one of the 67 counties in the state outside of Philadelphia except the capital county of Dauphin.

In the Illinois senatorial primary, the traction magnate, Samuel Insull, admitted expending $237,000, chiefly to bring about the nomination of Mr. Smith.

These slush-fund campaigns so far outdo Newberry and Newberryism in political corruption that the Michigan primary now seems by comparison a kindergarten affair.

Senators Are Federal Officers

These are the plain and simple facts. They do not require any legalistic hair-splitting interpretations of the Constitution which, whatever may be said on that side, does specifically state that the Senate shall be "judge of the elections, returns and qualifications of its own members."

While senators are elected by states, they are not state officers but federal officers, whose powers are derived from the Constitution, and the Senate is not bound to seat a senator-elect whose election was "partly bought and partly stolen"—to quote the language used by Governor Pinchot, of Pennsylvania, in refusing Mr. Vare a certificate of election.

In transmitting the Pennsylvania election returns to the president of the Senate, Governor Pinchot said, "The stealing of votes for Mr. Vare and the amount and sources of money spent, make it clear to me that the election returns do not in fact represent the will of the sovereign voters of Pennsylvania."

Fraud Played Big Part

Eight hundred thousand dollars is known to have been paid to "watchers," workers and others to get votes for Pennsylvania's so-called "million-dollar senator."

In one division of a Philadelphia river ward, 401 votes were cast, every one of the 401 for William S. Vare. Some of those who voted had not registered, some were not citizens of the United States, some were not of legal age and others were in the hospital, still others were unknown at their supposed places of residence.

Similar condition were found at other voting places. In 30 divisions of the Vare river wards in Philadelphia, Vare's chief opponent did not receive a single vote. The state outside of Philadelphia cast more than 59,000 majority against Vare.

The contention of the supporters of Vare and Smith that they were entitled to be given the oath of office and take their seats in the Senate until the cases were finally and fully adjudged was little more than a pretext.

A special committee of the Senate already had devoted months of time to obtain the exact facts. Both had been given every opportunity to be heard, and were heard themselves and thru able counsel. So far as we know, all the facts that have any bearing on the issue involved were obtained by the committee appointed for that particular purpose.

The Senate Could Do No Less

With such a report before it, supported by facts of public record, the Senate would have been derelict in its plain duty if it had permitted Vare and Smith to act as members of that body while the process of expulsion was being resorted to. It is inevitable that every technical artifice of delay would have been invoked while these men were actively exercising the powers and duties of senators. A majority only was needed to prevent the administering of the oath; but, as I have said, the contention would have been that a vote of two-thirds of the Senate was necessary to expel Vare and Smith once they were seated. Such a requirement probably would have made their expulsion impossible, regardless of absolute proof of the charges.

Under the circumstances I know of no possible valid demand, legal or otherwise, that could be made upon the Senate for seating either of these men. On the contrary its every obligation demands their rejection. As I shall never vote to seat men corruptly elected, I voted against the seating of Vare and Smith as I did against Newberry. It was a duty I owed my constituents and the country.

Arthur Capper

State Grange Meets in Erie

(Continued from page 3)

as it ever was. Strong efforts will be made to revive the lagging interest.

R. G. Bressler, Deputy Secretary of Agriculture, addressed the Grange on farm conditions and farm relief measures. A synopsis of the address will be published in this paper later.

Preceding the conferring of the Sixth Degree on Wednesday evening, Doctor Holbrook, of the Department of Education, delivered a most helpful and inspiring address on the necessity for careful and intelligent management of children and young people. We are sorry not to be able to reproduce the substance of this address in detail.

As is the usual custom, an hour was set aside on Wednesday for memorial services, in which tribute is paid to the memory of members of the official Grange family who have passed on during the past year. The list this year was made up of the names of Mrs. Rodgers, of Washington County; Charles Downing, past-lecturer, of Chester County, and Septimus Nivin, past-treasurer of Delaware County.

The total number of Granges in good standing is 900, with a membership of 82,000. Eighteen new juvenile Granges were organized during the year. The State Grange treasurer, Frank B. Willits, reported a balance in his hands on December 1, of about $31,000.

The number of resolutions offered was not as large as usual this year. The legislative committee passed upon those referred to it and reported their recommendations. The chief ones were acted upon by the Grange with the following result:

To maintain membership in National Board of Farm Organizations.

Opposing the $50,000,000 road bond amendment.

Opposing the $5,000,000 armory bond amendment.

In favor of the $25,000,000 forestry bond amendment.

Favoring the $8,000,000 bond amendment for buildings at State College.

In favor of putting the Bob White on the song bird list.

Opposing the liberating of any more rabbits, ring-necked pheasants, or other destructive game.

The nominees to fill the unexpired term of Master were E. B. Dorsett and John A. McSparran. The election was held on Thursday and resulted in the choice of E. B. Dorsett of Tioga County. Other officers elected were: Member of Executive Committee, Kenzie Bagshaw, Blair County; Member of Finance Committee, John S. Dale, Centre County; Director Keystone Grange Exchange, George W. Schuler, Berks County.

Will Display Farm Machinery

VISITORS at the twelfth annual Pennsylvania State Farm Products Show in Harrisburg, January 17, 18, 19, 20, will have the opportunity to see the biggest display of farm machinery and farm supplies that has ever been arranged in connection with a Pennsylvania farm exhibition.

Those interested in dairying will be able to examine five makes of milking machines, four kinds of silos, and at least 12 makes of commercial feed.

For the general farmer there will be at least 10 models of tractors, 11 models of plows of four makes, and three makes of threshers. Nine types of farm water systems and four types of rural lighting plants will also be on display. Among the exhibits of farm supplies will be found seven manufacturers of fertilizer and three of agricultural lime.

The fruit grower will have the chance of a lifetime to compare and study various makes of his necessary machinery and supplies. Eighteen models of sprayers and eight of dusters will be seen. At least 12 manufacturers of spray material and seven growers of nursery stock will also have exhibits and representatives at the show.

The poultry equipment will include several makes of incubators and brooders.

A prominent part of the potato exhibit will be the displays made by eight or ten manufacturers of potato machinery.

To complete the list, it would be necessary to mention harrows, ensilage cutters, fruit containers, fruit graders, eight types of dairy barn equipment, seven models of grain mills, three makes of manure spreaders, hay loaders, cultivators, cream separators and dozens of other present-day necessities on the farm.

Won Scholarship

HARRY A. FRIEDLINE, a potato, pig and baby beef club boy, of Boswell, Somerset County, is the winner of the 1927 Baltimore and Ohio Railroad scholarship. This award, amounting to $100 goes annually to the club member whose accomplishments in club work have been the most outstanding for the year in the 17 counties traversed by the Baltimore and Ohio.

Son—Well, what is a taxi-driver?
Father—He skins humans.

County News and Comment

Adams County, Pa.—The weather has been wet for the past month and the corn has not dried out as well as it should. Much fodder put away heavy. The country roads are rough and difficult to travel. No snow as yet. Wheat in fair condition. Hog feeders are disappointed in prices and are losing money this year at the present prices of feed. Steers are being fed about as usual at higher cost for feeder but prospects are for good returns. Milk cows are in demand and milk prices good. Eggs are scarce as most flocks are not producing many eggs. Prices: wheat, $1.33; corn, $1; milk, 4 per cent, $3.35; eggs, 65c.—A. R., Dec. 20.

Lancaster County, Pa.—Winter came after a late and wet fall. Thermometer registered 18 degrees on the 19th. No snow. Wheat fields well set. Some corn to husk and many have not hauled fodder as yet. Butchering is in order. The tobacco crop is pronounced the best quality for a number of years. A few buyers in the field offering from 13c to 15c for wrappers. Potatoes have gone out. Most at $1 and were a good yield. Several reported 400 bushels, a few had 500 bushels. Wheat, $1.30; potatoes, 80c@$1; poultry, 16@20c; eggs below normal, as low as 35c for mixed and 40c for best white.—C. R. L., Dec. 20.

Lebanon County, Pa.—The promoters who held the county show the week of December 5 deserve congratulations. It was fine. The Jonestown Boys' Club won first prize for corn judging. Show was held in Mafits Hall, Lebanon. The last weeks have been rainy and snowy. Much fodder still out in fields. The zero blasts of last week turned attention to coal and wood storage and also to butchering. There are many fat hogs about. Some five hundred pounders. Manure hauling and plowing stopped by cold. Many pullets starting to lay well. Work in great limestone quarries slackening. Less and less lime being applied. Accidents on roads increasing. Jay walkers and middle-of-the-street hikers just don't look out for motor cars. Of course, the cars suffered the least damage. Radios are quite numerous and common now. Apples, potatoes and corn on up grade. The iron mountain of iron ore at Cornwell is now being mined by real miners who have moved in. Cornwell ore mountains are a natural curiosity—one of the richest deposits of its kind on earth. We extend Christmas greetings to all readers and especially do we wish Skookum (big chief), Snookums and his little brother a happy Christmas in the home of their parents and grandparents.—Eggs, 54c; butter, 55c; hay, $16; straw, $12; ducks and chickens, 24c; potatoes, bid, $1.40. Coal at dealers' yards, $7 for buckwheat up to $14 for best domestic sizes. Labor about 30c per hour.—R. I. W., Dec. 12.

Mifflin County, Pa.—Weather still warm and summer-like with frequent showers. Had only a few hard freezes. Still good pasture in many places. Some corn to husk and much fodder out on account of it being too wet and immatured. Corn is in a bad condition as the frequent rain and the continued warm weather caused it to sweat and remain soft rather than dry out. Many farmers are not prepared with winter wood on account of wet weather, bad roads and scarcity of help. Local market: wheat, $1.25; corn, 80c; oats, 45c; butter, 45c; eggs, 50c; lard, 15c; dressed pork, 15c; chickens, 20c; potatoes, $1.25; apples, $1.—J. H. B., Dec. 15.

POULTRY

R. L. SCHARRING-HAUSEN
Editor
Glenview Farm

March Pullets May Be Molting

I have 800 March-hatched pullets. White Leghorns, that have been laying about 57 per cent of production the last two months but now some of them are molting and have shriveled combs and are not very active. The most puzzling part to me is that some of the pullets, especially the ones with shriveled combs, go to roost at night without any grain or mash in their crops. The crops are entirely empty and they have sufficient grain before them to consume. I realize that if they do not eat grain they cannot keep up in body weight but I do not know just how to get them to consume grain at night. Would you advise that I sell them for meat,—that is the ones with shriveled combs and the ones that do not eat grain before going to roost,—or will they come back again into production in a short time? I am feeding a commercial egg mash and feed fourteen pounds per hundred birds of scratch grain.

I have the New Jersey type laying house with muslin screens in front. When the temperature registers 24 degrees would you advise closing up the curtains tight at night? How would you ventilate for cold weather?—W. W. W., Chester County, Pa.

March-hatched pullets are rather uncertain as to their behavior at this time. That is, earlier birds are expected to molt and later birds are expected not to, while March birds may or may not. Your birds that you speak of may be molting, at which time a hen always seems to act out of her head in regard to her behavior. At the same time, I have seen birds fall off in appetite as you describe just before coming down with the pox or roup. Whether they refused to eat because they were getting sick or got sick because they refused to eat is a question. I would suggest that you put these birds by themselves if you do not have too many, and see what develops. If they are merely molting they will get over it and lay again in a couple of months, but if they start to get sick I would be tempted to clean them out.

In regard to the ventilation, if you will write the New Jersey Station at New Brunswick, addressing Prof. Gross, you can get plans for flue ventilating system to install in the N. J. type house. I always feel inclined to shut up curtain on cold nights, as to my notion extreme cold is worse than lack of fresh air. To tell the truth, there is more or less ventilation even with the curtains up, especially if they are made of burlap or other coarse material.—R. L. S.-H.

Build Movable Brooder House

Kindly give me specifications for the ideal brooder house to accommodate about 300 chicks. What is the best heating system where gas and electricity are not available?—H. P., Butler County, Pa.

A 10x12 colony house, built on skids so that it can be moved about from place to place in the interests of sanitation makes a very satisfactory structure for brooding chicks. If you address the New Jersey Experiment Station at New Brunswick or the Pennsylvania State College at State College, Pa., you can no doubt get plans for such a building without charge.

I think you will find a coal-burning brooder stove the most satisfactory for your purpose.—R. L. S.-H.

Hen's Crop Does Not Seem to Empty

I have a nice flock of chickens. Among them I have a big Wyandotte hen with a big crop which does not seem to empty. Should I kill her?—B. M.

While it is sometimes possible by massage to empty the pendulous crop which the reader describes, it does not always prove successful. It is also possible to operate, plucking the feathers away from in front of the crop and making a small slit with a razor through which the contents can be removed. The crop and surrounding parts should then be washed with a mild antiseptic, after which the slit can be sewed up, sewing the crop and the skin separately. This is a lot of trouble to take for an ordinary hen, and while the ailment is not a disease and cannot be transmitted, it would probably be best to kill the hen, and put her in the pot if she seems otherwise healthy.—R. L. S.-H.

Wants Dry Mash Formula

Will you please give a formula for a dry mash for laying hens?—G. F. A., Bradford County, Pa.

A very good laying mash using home products and containing sufficient minerals is composed of the following ingredients: 100 lbs. bran, 100 lbs. middlings, 100 lbs. ground oats, 100 lbs. yellow corn meal, 100 lbs. meat scrap, 5 lbs. salt, 15 lbs. oyster shell meal or limestone flour and 5 pints cod liver oil.—R. L. S.-H.

Nest Box Notes

POULTRYMEN who intend to buy chicks for the coming spring will find it very much to their advantage to do so now. In the first place, they can have the chicks shipped at whatever date is most suitable, and in addition, save considerable money. Many hatcheries offer a considerable discount for orders placed now accompanied by cash. In some cases this may be as high as 20 per cent. Of course, it is true that many poultrymen may be a little short of ready cash just now, on account of the pullets not laying heavily yet, or for various other reasons, but anyone whose credit is good can go to the bank and borrow the money there, if he will just explain matters to the cashier. It is very good business to borrow $80 for three months at a cost of $1.20 and pay for chicks now to be shipped in March that would cost $100 then. The buyer would be sure of his chicks and save $18.80 beside. Business men in town take advantage of such opportunities by using the banks all the time, and there is no reason why farmers should not avail themselves of the same privileges. That is what banks are for.

• • •

Mash makes eggs and grain makes flesh. Start off the pullets that have been fattened on grain by cutting down the quantity of grain fed, giving free access to laying mash, and perhaps by feeding a moist mash of milk and laying mash at noon. When the pullets get to laying thirty or forty per cent, start giving a moist fattening mash of equal parts corn meal, rolled oats and buttermilk instead of the other, and feed a little more grain besides. Make all changes gradually. This advice applies particularly to Leghorns and other nervous breeds. Individual judgment counts here, as it is possible to overdo either the fattening process or the other.

• • •

THIS is the season when roup and colds play havoc with flocks. There seems to have been an unusual lot around this year, and while a good many folks say that the unseasonable and damp weather causes disease, it isn't the cause, although such conditions no doubt affect the general health of the birds and make them more susceptible to ailments. Remedies are not always dependable. The latest recommendations are in the nature of prevention rather than cure. We are now patterning after the Chinese, who are said to pay the doctor while they are well, but who stop paying when they get sick. This is not such a bad idea after all.

• • •

In applying Oriental philosophy to the poultry business, in so far as disease prevention is concerned, the idea is to raise the pullets out of contact with contaminated soil and away from older birds that may be carriers of disease, feed them a properly balanced ration and all they will eat of it, house them properly without crowding, and get them into clean and disinfected laying houses as soon as they mature and show signs of laying. It is not a good idea to put pullets in with older birds, not only on account of disease, but from other standpoints as well. It is probably inadvisable to put them in the same buildings, even. There is evidence that roup is a dust-borne disease, and is taken into the system through the respiratory tract rather than through the digestive system, so that a flock of old birds apparently healthy but carriers of disease might infect pullets in an adjoining pen through dust or dirt getting from one pen to the other, and being breathed by the pullets. Now this may seem far fetched, but on the contrary is right in line with recent discoveries, and goes a long way to solve some of the mysteries connected with disease.

• • •

Another phase of the problem of disease concerns worms. In most sections tapeworms are not prevalent, but roundworms are very common. Tapeworms are fly borne, and we are not going to say much about them now, but roundworms are present in the egg stage in the soil from which they get into the chicken while it is feeding. It seems that worms do a great deal of damage to the intestines of chickens so that even if the parasites are eliminated by tobacco the intestines are so injured that the digestive system does not function properly and the bird is not right even if there are no more worms there. Unfortunately there is no means of disinfecting, liming or plowing soil so as to kill or bury those eggs, and the only way to get around the difficulty is to move the colony houses.

• • •

I am bringing up these points at this time because I believe that they are vital to every poultryman who has been in business for any length of time. Right now there is a good opportunity to move colony houses to a new location when the ground is bare and frozen, and to have the work done where practicable before the spring mud or the spring rush interferes. It isn't such a great while until then. Before moving all such houses should be thoroughly cleaned and the dirt spread out where no chickens can get to it, in order to avoid moving germs and dirt to the new location. It is also a good time to make plans for any changes along the lines mentioned, and then make the changes.

Butchering Time is Here

Smoking and curing the hams and bacon of hogs in the old-fashioned way gives the family a supply of delicious food through the winter and spring—L. W. M.

DAIRY

A. A. BORLAND, Editor
Head of the Department of Dairy Husbandry
Pennsylvania State College

Holstein Herd Leads Wellsboro C. T. A.

THE Wellsboro C. T. A. finished its first year November 1, 1927, with 23 whole-year members. In addition three members were in the association only part of the year. There were 371 cows in the association during all or part of the year.

There are a number of very outstanding herds and also individual cows in the association which will be seen in the following records:

Roy S. Bowen has the highest herd result in the association, he has just started in the purebred Holstein breeding and has a very outstanding herd. The high individual cow belongs to Harry W. Wilkinson and he also has a number of other high producing cows.

Out of 15 herds which produced over 300 pounds, there were 3 herds with an average production of over 400 pounds of butterfat. Fifty-one cows produced over 400 pounds of butterfat.

The results for the whole year members are as follows:

Total average number of cows in the association.. 303.67

Average per cow:

Pounds of milk	8809
Pounds of butterfat	326.6
Percentage of butterfat	3.7
Value of product	224.83
Cost of pasture	10.09
Cost of roughage	38.84
Cost of grain	52.19
Total cost of feed	101.12
Value of product above feed cost	123.71
Returns for $1 expended for feed	2.22
Feed cost per 100 lbs. milk	1.15
Feed cost per lb. butterfat	.31

Following is a grouping of all cows producing over 300 pounds of butterfat: Group 1, over 800 pounds of butterfat, 1; group 2, between 600 and 700 lbs., 1; group 3, between 500 and 600 lbs., 12; group 4, between 400 and 500 lbs., 37; group 5, between 300 and 400 lbs., 107. Total number of cows producing over 300 lbs. of butterfat, 158.

Paul P. Korb, county agent; Leroy Whittaker, cow tester in charge.

Fifteen herds with an average of 5 or more cows exceeded an average production of 300 pounds of butter fat. A complete list of these herds follows:

Owner.	Ave. no. of cows	Breed	Pounds milk	Pounds fat
Roy S. Bowen, Wellsboro	7.92	R. H.	15,500	490.9
R. W. Sampson, Crooked Creek	13.67	R. & G. H.	12,210	421.3
E. C. Howell, Wellsboro	7.17	R. H.	11,294	407.8
Fred Erway, Wellsboro	13.08	R. H.	11,824	386.9
Gale Gerow, Wellsboro	10.92	R. H.	11,485	374.2
Harry Wilkinson	26.67	R. & G. H.	10,964	372.3
T. J. Erway, Wellsboro	12.17	R. & G. H.	10,239	365.1
Claude Carpenter, Crooked Creek	15.83	R. H.	9846	357.5
Leon Turpy, Wellsboro	13.83	R. & G. H.	8611	350.1
R. M. Vaising, Wellsboro	13.00	G. H.	9364	343.1
O. W. Butler, Wellsboro	12.42	R. & G. G.	7840	343.1
Henry Noelk, Wellsboro	11.58	G. G. G. A. & G. H.	7920	333.6
James Warren, Wellsboro	14.00	R. & G. H.	9036	324.5
P. W. Lawton, Tiadaghton	8.83	R. & G. H.	9019	316.3
Homer Webster, Wellsboro	18.00	R. & G. H. & G. A.	8887	312.6

DAIRY

Buck & Doe Run Valley Farms—Hereford Cattle and Poland China Hogs. All ages for sale. THE SAINT AMOUR COMPANY, Mortonville, Pa.

10 GUERNSEY DAIRY HEIFER CALVES—Practically pure, from rich milkers. Write to L. H. TERWILLIGER, WAUWATOSA, WIS.

IF YOU WANT practically pure bred Holstein or Guernsey dairy calves, write EDGEWOOD DAIRY FARMS, Whitewater, Wis.

SWINE

BERKSHIRES—We have a splendid lot of fall pigs, either sex, sired by Elimination Ilital, that are good and already. Price reasonable. Also several high class gilts, all priced to sell. DAVIS BERKSHIRE FARM, Dagsboro, Del.

300 FEEDING PIGS six to seven weeks old $4.00 each. These pigs are grown on free range with access to growing grains. INDIAN CORN HOG FARM, Dushore, Pa.

Chester Whites Big Type Chester Whites: From big prize winning herd Service Boars and open Gilts. Also pigs at 10 weeks of age for sale. H. H. WERKING, Woodsboro, Md.

PIGS O. I. C. Registered Bred Sows, March Gilts. Farmer's prices. G. ROUTZAHN, Aspers, Pa.

155 HEAD—Big Type Pedigreed Chester Whites. Young boars, bred sows and pigs from my big show sows and Champion boars C. E. Cases Model Duke. Pa.

BERKSHIRES Excellent, registered Berkshire pigs, both sexes, 8 weeks old. W. F. MacPARRAN, Parrish, Pa.

HIGH GRADE CHESTER WHITE and Berkshire Pigs, 6 and 8 weeks old, $4.00 and $5.00 each. L. LED ROUSE, DUSHORE, PA.

PURE BRED Poland China Boars—Serviceable, 150 to 250 lbs., $35 to $45 C.O.D. Fall Pigs. STANLEY SHORT, CHESWOLD, DELAWARE

POLAND CHINAS Registered. Purebred. Big type Pigs. Prices reasonable. C. L. LEBO, Woosidori, Pa.

HORSE WANTED

WANTED A Registered Percheron Stallion. Give full description and price. C. E. CASSEL, HERSHEY, PA.

DOGS

Collie Puppies Farm raised, pedigreed, the better sort. Descriptive, illustrated circular free. Clovercrook Collie Kennels, Chambersburg, Pa.

GOATS

WORLD'S Best Toggenburgs & Nubians, utility milkers, $15; purebreds, $25. Fine buck from gallon stock, $35. Kids, $15. Goldsboro's Goatery, Mohetas, Pa.

FRUIT TREES

PEACH TREES, $5 per 100 and up. Apple Trees, $7.50 per 100 and up. In large or small lots direct to planters by freight, parcel post, express. Plums, pears, cherries, grapes, nuts, berries, pecans, vines, ornamental trees, vines and shrubs. Free catalog in colors. Tennessee Nursery Co., Box 124, Cleveland, Tenn.

MISCELLANEOUS

MILK BOTTLE CAPS—5000 caps, two colors, heavy parchment, specially printed, your name, grade milk, address. Delivered $2.65. American Milk Cap Co., 5306 Pacific, Detroit, Mich.

ALFALFA and alfalfa mixed hay—In carload lots right from a farmer in the best alfalfa section of New York State. The Cross Farm, Fayetteville, N. Y.

VIRGIN WOOL YARN for sale by manufacturer at bargain. Samples free. H. A. Bartlett, Harmony, Maine.

EVERYTHING PRINTED! Special—250 envelopes $1.00. Write, Franklinprint, Milford, New Hampshire.

FISTULA—Horses cured $5. Pay when well. Chemist, Harmer, Kansas.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

HORSES HAVE SKIN IRRITATION.

—I have a roan mare that bites herself at different places over her body. She rubs her head so much she has some of the hair rubbed off. She had been rubbing her tail but has now quit that. She also rubs her mane some on the halter chain. I also have a sorrel mare that I sometimes see stamping with her hind feet as though she was itchy. For the last two years in the early spring there is a large place on her left hip where the hair comes out.—W. W. B., Newville, Pa. These horses should be examined for parasites as these symptoms may be shown by horses that are lousy. It is very probable that this condition comes from an internal disturbance. Try giving one quart of raw linseed oil per horse as a drench. Give bran mashes once or twice per week. A handful of oil meal in the ration daily may be helpful. Feed a laxative diet and allow exercise daily. In warm weather this treatment is supplemented with a bath of warm water containing two per cent lysol or creolin.

Best He Could Do

Dealer, rushing into newspaper office—See here, you've published an announcement of my death by mistake. That's got to be fixed up somehow!

Editor—Well, we never contradict anything we have published, but I'll tell you what I'll do. I'll put you in the births column tomorrow and give you a fresh start.

Thrifty Bridegroom

Mr. MacDonald (arranging with Clergyman for his second marriage)—And I should like the ceremony in my yard this time, sir.

Clergyman—Good gracious, why?

Mr. MacDonald—Then the fowls can pick up the rice—we wasted a deal last time!

Earnest Encore

Chemist (to motorist who had been carried into his shop after an accident)—Yes, sir; you had rather a bad smash, but I managed to bring you to.

Motorist—I don't remember. Do you mind bringing me two more?

His Alibi

Lady—A strong man like you ought not to beg. Why don't you look 'round for a job?

Hobo—I can't look 'round, lady; I gotta stiff neck.

TIGHT BINDING

HEALS

Much easier to milk cows with perfect udders and teats — soft, silky, pliable. No nervous twitching, no kicking or holding back of the milk. Thousands of dairymen use Bag Balm regularly as their protector of the udder and teats. For quickly healing sores, chaps, cuts, inflammation, caked bag, bunches, cow-pox, etc. it has no equal. Even with the most stubborn hurts, first application starts quick relief.

Bag Balm is sanitary, pleasant to use, and cannot taint the milk. Big 10-ounce can of this wonderful penetrating ointment, only 60c at feed dealers, general stores, druggists. Mailed postpaid if hard to obtain locally.

Friendly Talks

By Edgar L. Vincent

A CHEERY spirit waits just round the corner, ready to spring out and salute us with a "Happy New Year!" He comes with a smile and a friendly grip of the hand, just as if he expected us to be glad to see him. Whether we are or not, he is here, and it is for you and me and all of us to greet him in the same spirit in which he comes and to give the great new hope he brings a chance to work out its best in our lives.

Some Look Askance at 1928

For a great many people the New Year has nothing in it of foreboding. The past has been kind to these folks of the fortunate circumstances. Not all of us are able to look into the future just that way, however. Somehow we feel, whether it is true or not, that fortune has not been just as kind to us as it ought to have been. Our plans last year did not turn out exactly as we had hoped they would. That may have been true for more years than one; and although we may not admit that our ill fortune has been in great part due to our own manner of living, we do feel a bit sore about it, and we look askance at this new comer they call 1928 and not with very friendly feelings. We doubt there being anything better for us next year than the past has brought us.

Now, that is not a very good way of looking at it. Nor is it really kind to Him who holds all the days in His hands. It is His wish for us that we shall look upon every year and every day as a priceless gift, fresh from His hands, a thing to be accepted and used the very best we can.

"I Still Press Forward"

Long ago one of the most useful men the world ever knew spoke some words that will be very helpful to us if we take them to heart. This man, we know him as Paul, had many things to hinder him in his struggle toward the end he so much desired to reach. Far along in years, looking back over it all, he made out a list of the things which had befallen him. We have all read that story a good many times and no doubt most of us have wondered how any man ever could have come through it all alive. What of hardship had not Paul met, and all so bravely! Through everything he had kept his faith shining bright. No night was so black that the skies were not pierced by the star of hope. Listen to him.

"I have not as yet attained!" No. Always something more and something better to work for. "But," he goes on, "I still press forward." Which way? Backward toward the old, hard, bitter, discouraging things? Oh no. Forward! Toward better things than any that yet have been! And here is our encouragement.

On Toward Accomplishing the Plan

If we have not come to the good place for which we long; if crops have not been as good as we had hoped; if there have been storms and frosts and dry weather to contend with; if prices have been low, so that we could not do as we would like to have done by the boys and girls, still we are to press on! Which way? Back toward the mists and the shadows? Back where times have been hard and hope failed? Back toward the places where we were half inclined to lie down in the furrow and let the world go as it would? No! Not that way! Press forward! "Toward the mark of the high calling!" Forward toward the morning sunrise! Forward, though the future is all a closed book to us. Forward! Turn the leaves of the book bravely and with a spirit of assurance that all is working out for us the best possible! Forward, toward the accomplishment of the plan that was made for us before the morning stars sang together! That is all we can do! It is enough!

Uniform Profit-Earning

Dairy and Poultry Feeds for Every Need

You can get . . . under the B-B [Bull-Brand] Trade-Mark . . . Dairy and Poultry Feeds that will meet your specific needs. Each of these B-B Feeds is prepared according to a formula that has been tested and proved, in actual feeding, by thousands of Dairymen and Poultrymen. Every B-B Feed is made of pure, "grade-one" ingredients that are *cleaned three times* and compounded into a uniform ration which will produce the results that have won thousands to B-B Feeds.

Bull-Brand *Sweetened* Dairy Ration.
24% Protein; 3.5% Fat. 12% Fiber.

Bull-Brand *Dry* Dairy Ration.
24% Protein; 6% Fat. 12% Fiber.

B-B Red-E-Mixt *Sweetened* Dairy Feed.
20% Protein; 5% Fat. 10% Fiber.

B-B Hi-Test *Sweetened* Dairy Feed
20% Protein; 5% Fat. 12% Fiber.

B-B Marmico *Molasses* Dairy Feed.
16% Protein; 4% Fat. 12% Fiber.

B-B Chick Starter with Dried Buttermilk.
12% Protein; 4% Fat. 4% Fiber

B-B Chick Feed.
11% Protein; 2.5% Fat. 4% Fiber.

B-B Growing Mash with Dried Buttermilk.
18% Protein; 5% Fat 7% Fiber.

B-B Developing Feed.
10% Protein; 2% Fat. 5% Fiber.

B-B Laying Mash with Dried Buttermilk.
20% Protein; 5% Fat. 8% Fiber.

B-B Scratch Feed.
11% Protein; 2.5% Fat. 4% Fiber.

B-B Red-E-Mixt Egg Mash with Dried Buttermilk.
15% Protein; 4% Fat. 9% Fiber.

B-B Dairy Scratch Feed.
9% Protein; 2.5% Fat. 5% Fiber.

B-B Pigeon Feed.
11% Protein; 4% Fat. 4% Fiber.

Cows and chickens are unable to earn uniform, "day-in-and-day-out" profits when they are fed on rations that are made of certain kinds of ingredients one month and entirely different kinds of ingredients the next month. B-B Feeds are always made of the same ingredients. Their ingredients are always of "grade-one" quality. They are always compounded to the same, never-varying formulas. That's why they earn uniform profits, month after month, year after year.

Try B-B [Bull Brand] Feeds Under This Guarantee

Get 300 pounds of B-B [Bull Brand] Sweetened or Dry Dairy Ration or a 30-day supply of B-B [Bull Brand] Poultry Feeds from your local Bull Brand Dealer. Feed according to the directions in each sack. Check the production. Compare the results. If B-B [Bull Brand] Feeds do not produce greater results per dollar of feed cost . . . bring the empty sacks and the unused feed back to our dealer and he will refund every cent of your money.
